 Meteorologist in Charge
 Weather Forecast Office Albany New York

Subject: Change in Gage Zero Elevation for the River Gage at
Middleburgh on the Schoharie Creek (MDBN6)

On July 10, the USGS will change the Gage Zero/Gage Datum Elevation for the river gage at Middleburgh on the Schoharie Creek from 612.48 feet above NAVD of 1988 (New York State Department of Environmental Conservation Flood Plain Elevation Reference Mark) to 612.77 feet above North American Vertical Datum of 1988 (NAVD 88). The gage will remain at the same physical location. Only the elevation of the Gage will change.

This change is being made as part of an initiative to modernize vertical datums associated with stream gaging equipment. Observations will be reported in feet above North American Vertical Datum of 1988 (NAVD 88).
