**FOR IMMEDIATE RELEASE**

October 13, 2016

## **National Weather Service to Provide New River Forecast Services near Redbud, Georgia**

The National Weather Service forecast office and the Southeast River Forecast Center collocated in Peachtree City, Georgia will now provide flood only river stage forecasts for the [Coosawattee River near Redbud, Georgia](#).

Beginning November 15, the new service will help protect the lives and property of people living along the river near Redbud. Flood stage at this location is set at 25 feet. The river gage site is owned and operated by the U. S. Geological Survey and is funded in cooperation with the U.S. Army Corps of Engineers, Mobile District.

“The addition of Redbud to our river forecast responsibilities will provide enhanced flood warning services for residents along the Coosawattee River,” said Keith Stellman, meteorologist-in-charge of the weather forecast office.

The Peachtree City forecast office provides all weather services for 96 counties in north and central Georgia. The office collects meteorological data; prepares and disseminates weather forecasts, river and flood forecasts and warnings; and issues severe weather watches and warnings to the public.

The Southeast River Forecast Center (SERFC) prepares river stage forecasts for more than 260 locations along major rivers in the southeast portion of the United States. Covering approximately 270,000 square miles, the center’s area of responsibility includes north and central Georgia. These forecasts are then forwarded to National Weather Service forecast offices throughout its service area for dissemination to the public.

“This new forecast service near Redbud is invaluable,” said Reggina Cabrera, hydrologist-in-charge of the SERFC. “The river stage forecasts help us meet the National Weather Service mission of protecting life and property for the citizens in the Redbud area.”

[NOAA's National Weather Service](#) is the primary source of weather data, forecasts and warnings for the United States and its territories. NOAA’s National Weather Service operates the most advanced weather and flood warning and forecast system in the world, helping to protect lives and property and enhance the national economy. Working with partners, NOAA’s National Weather Service is building a Weather-Ready Nation to support community resilience in the face of increasing vulnerability to extreme weather.
