Probabilistic Hydrologic Outlook
National Weather Service Grand Forks ND
240 PM CDT Thu Jun 22 2023

...DEVILS LAKE OUTLOOK FOR FLOOD POTENTIAL...

Devils and Stump Lakes
Long-Range Probabilistic Outlook

The National Weather Service provides long-range probabilistic hydrologic outlooks for Devils and Stump lakes between January and September. They will not be provided between October and December. Depending on the season, the high or low water probabilities may be omitted due to their applicability to the hydrologic situation.

.OUTLOOK SUMMARY...

Note: This outlook incorporates a daily average of 350 cfs worth of pumping operations on Devils Lake from June 1st through November 10th.

Following the spring snowmelt run off, lake levels look to have peaked in late May/early June somewhere between 1450.6 and 1450.8 ft. With well below normal precipitation through much of the month of May and persisting into June, lake levels have already begun to slowly recede.

Climate outlooks indicate the potential for above normal temperatures to continue into the first part of July. However, conditions do not look to be quite as warm as they have been for much of June. A more active weather pattern is expected in the near term with sporadic chances for showers and thunderstorms. Further out, outlooks indicate equal chances for above, below, or near normal temperatures and precipitation through the remainder of the summer season.

Lastly, the first non-exceedance numbers for the year are included below with this outlook issuance.

.Chances of Devils and Stump Lakes Rising Above Given Lake Levels...

The probability of exceeding a given lake level is the percentage of maximum lake level rises that are above that level for all the years that were run through the model using the precipitation and temperatures for those years during the valid period of the outlook.

Interpretation Aid: There is a 50 percent chance that Devils Lake will rise above 50.6 feet during the valid period and only a 5 percent chance that it will rise above 50.8 feet.

Note: The current gage zero datum of the Devils Lake at Creel Bay gage is 1401.33 feet NAVD88 or 1400.00 feet NGVD29. The gage zero datum of the Stump Lake at East Stump Lake gage is 1401.21 feet NAVD88 or 1400.00 feet NGVD29.

Probabilities for Exceeding Listed Lake Levels

FROM JUNE 19, 2023 TO SEPTEMBER 30, 2023

LOCATION	95%	90%	75%	50%	25%	10%	05%
-----	-----	-----	-----	-----	-----	-----	-----
Devils Lake.....							
CREEL BAY	50.6	50.6	50.6	50.6	50.7	50.8	50.8
Stump Lake.....							
EAST STUMP LAKE	50.6	50.6	50.6	50.6	50.7	50.8	50.8

.Current and Previous Record High Lake Levels...

- * The current height of Devils Lake is 1450.54 feet NGVD29.
 - * The current height of Stump Lake is 1450.38 feet NGVD29.
 - * The most recent USGS provisional record daily average height for Devils Lake at the Creel Bay gage:
 ...1454.30 feet on June 27 of 2011
 - * Previous records:
 ...1452.05 feet on June 27 of 2010
 ...1450.93 feet on June 27 of 2009
 ...1449.20 feet on May 9 of 2006
 ...1449.18 feet on June 17 of 2004
 ...1449.17 feet on August 2 of 2005
- Note: All previous records are recorded in NGVD29.

.Chances of Devils and Stump Lakes Falling Below Given Lake Levels...

The probability of not exceeding a given lake level is the percentage of lake level falls that are below that level for all the years that were run through the model using the precipitation and temperatures for those years during the valid period of the outlook.

Interpretation Aid: There is a 50 percent chance that Devils Lake will fall below 49.2 feet during the valid period and only a 5 percent chance that it will fall below 48.8 feet.

Probabilities for Non-Exceeding Listed Lake Levels

FROM SEPTEMBER 01, 2023 TO NOVEMBER 30, 2023

LOCATION	95%	90%	75%	50%	25%	10%	05%
-----	-----	-----	-----	-----	-----	-----	-----
Devils Lake.....							
CREEL BAY	49.9	49.7	49.4	49.2	49.0	48.9	48.8
Stump Lake.....							
EAST STUMP LAKE	49.9	49.7	49.4	49.2	49.0	48.9	48.8

The non-exceedance value for a listed percentage is the value where that percentage of all model cases run were below that lake level for the specified valid period of the outlook.

.OUTLOOK SCHEDULE...

- Between January and May, only the high water exceedances will be provided with valid periods ending at the end of September.
- Special Spring Flood and Water Management Outlooks will be issued

in late February and early March.

- For June and July, both high-water and low-water exceedances will be provided.
- For August and September, only the low-water exceedances will be provided with valid periods ending at the end of November.
- No probability of exceedance/non-exceedance information will be given from October through December, since lake freeze-up levels will be given in the fall outlooks previously issued.

.ADDITIONAL INFORMATION...

The long-range probabilistic outlook is based on high and low lake levels that were calculated for the valid period using multiple scenarios of temperature and precipitation from 1949 to 2018 and current conditions of the lake, snowcover (in winter), and soil moisture.

By providing the complete range of lake level probabilities, the amount of risk associated with long-range planning decisions can be determined. These probabilistic outlooks are part of NOAA's National Weather Service's Advanced Hydrologic Prediction Services (AHPS).
