The National Weather Service in Wichita is responsible for operating six NOAA All Hazards Weather Radio transmitters, which broadcast weather warnings, watches, forecasts, observations and other weather information, 24 hours a day, 7 days a week. The transmitters are located in Wichita, Erie, Ellsworth, Beaumont, Sharon and Great Bend. (all in Kansas).

Radios in "alert" mode will automatically activate, and sound an alarm tone when a severe weather watch or warning is issued, or if other critical information is received. Radios with SAME technology allow the user to program their radio to receive tone alerts for selected counties.
