

# National Weather Service Wilmington, NC

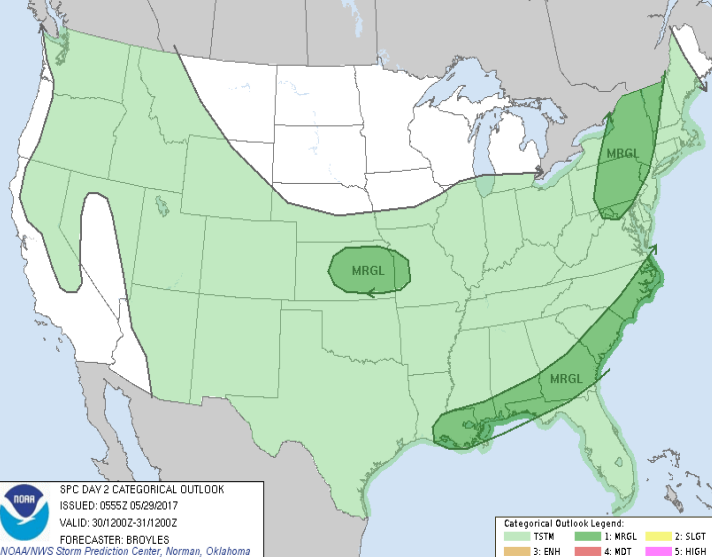

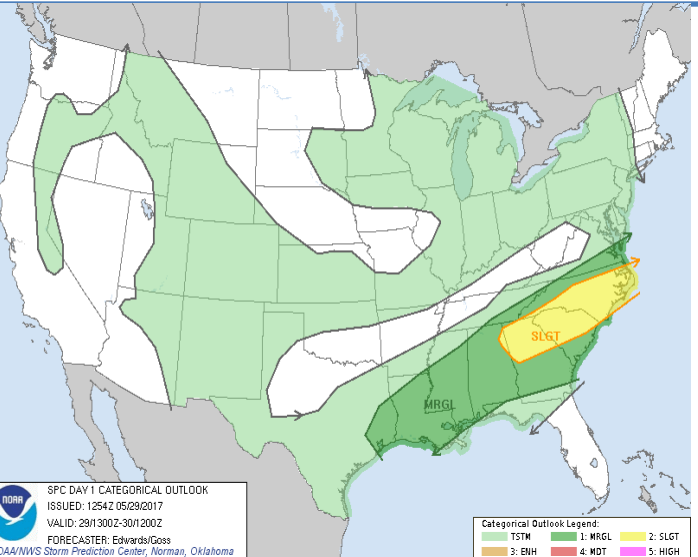

Outlook Period: **Mon 05/29/17 – Fri 06/02/17**  
Time Issued: **11 am Mon 05/29/17**

Prepared by: **Douglas C Hoehler**  
Lead Forecaster Phone # **910-762-4289**

**Overview:** Convection chances will be highest Mon thru early Wed and again late Thu thru Fri. A stalled sfc front will lie across the area at the start of this work-week and periodically will dissipate and be replaced by yet another cold front that drops southeast and stalls across the region. Weak upper level disturbances will periodically move across the region and interact with the stalled sfc fronts and the daily sea breeze boundary, resulting in an increasing severe tstorm threat. Daily max/min temperatures will run above normal today and near normal for the remainder of the week.

**Impacts with Timing:** For tonight into early Tue, there is a slight risk for Severe Tstorms. Damaging wind gusts will be the primary concern with large hail the secondary. For Tue aftn and night, there will be a marginal risk for severe thunderstorms with damaging wind gusts the primary. For today, heat Index values may breach 100 degrees this afternoon.
