

Weather Radar in Syracuse, Indiana – NWS Northern Indiana Gets Upgrade

Contact: Mark Frazier, mark.frazier@noaa.gov, 574-834-1104

March 14, 2018

The weather radar used by the National Weather Service Forecast Office in Northern Indiana (KIWX) will be down for approximately five days beginning Monday, March 19, 2018 for technicians to install an important technological upgrade. The work on the WSR-88D has been scheduled to minimize any potential impacts to office operations.

During the outage, radar coverage is available from adjacent radar sites including WSR-88D radars in Indianapolis (KIND), Chicago (KLOT), Grand Rapids (KGRR), Detroit/White Lake (KDTX), Cleveland (KCLE) and Wilmington (KILN). Terminal Doppler Radars are located in Chicago-Midway (TMDW), Indianapolis (TIDS), Detroit (TDWT) and Dayton (TDAY).

A crew will install a new signal processor, which replaces obsolete technology, improves processing speed and data quality, provides added functionality, and supports IT security.

This is the first of four major upgrades, known as service life extension projects (SLEP), planned in the next five years to replace and refurbish major components of the 20 year old WSR-88Ds and to keep the radars operational into the 2030s. The \$150M investment is being made by the three organizations that use these radars, the NOAA National Weather Service, United States Air Force and Federal Aviation Administration. The other service life extension projects include refurbishing the transmitter, pedestal, and equipment shelters.

NOAA's mission is to understand and predict changes in the Earth's environment, from the depths of the ocean to the surface of the sun, and to conserve and manage our coastal and marine resources. Join us on [Facebook](#), [Twitter](#), [Instagram](#) and our other [social media channels](#).
