## **Key Messages**

High Rip Current Risk at the Northeast FL Beaches

- Minor Tidal Flooding this Weekend for the St. Johns Basin
  - Main Impact Area: Downtown Jacksonville Southward

Isolated T'Storms Possible on Sunday Afternoon & Evening

# **High Rip Current Risk**

This Weekend - Northeast FL Beaches

**Northeast Florida Beaches** 

Frequent, Life-Threatening Rip Currents

Rip Currents can keep strong swimmers away from shore.

Safest place to be is on dry land!

High Rip Current Risk

# **Coastal Flood Advisory**

**Through Sunday** 

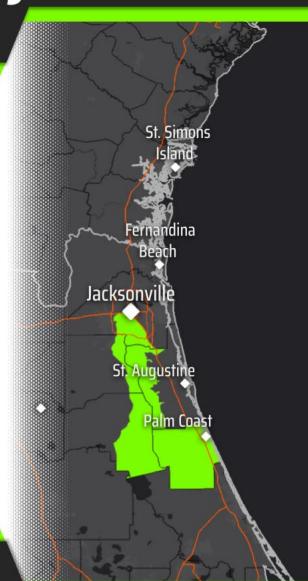

Minor Coastal Flooding Near High Tides

St. Johns River South of Jacksonville, coastal Flagler County

- Tidal flooding up to 2 ft (above normally dry ground)
- Mainly nuisance tidal flooding
- Impacts to low lying areas, boat ramps, docks & some roads

Coastal Flood Advisory

### **Tropical Weather Outlook**

#### **Monitored Systems**

- Central Atlantic: A tropical wave moving westward has a low (30%) chance of development near Lesser Antilles late this weekend or next week.
- North Atlantic: Low pressure has a low chance (10%) of subtropical development this weekend before moving over colder waters.

### **Local Impacts**

None expected at this time.
