

Weather Synopsis

Synopsis of Upcoming Weather...

- Dry conditions will persist through Friday.
- Mostly light winds less than 10 mph through midweek. Winds will be 15-20 mph from the south Thursday and then 25 to 35 mph from the south-southwest Friday.

Weather Outlook...

- Today and Wednesday –
 - Temperatures slightly above normal. Dry.
- Thursday and Friday –
 - Temperatures well above normal. Perhaps near records Friday.
 - Breezy, especially Friday afternoon.
 - Dry Thursday, then a chance for rain late Friday and Friday night

Confidence...

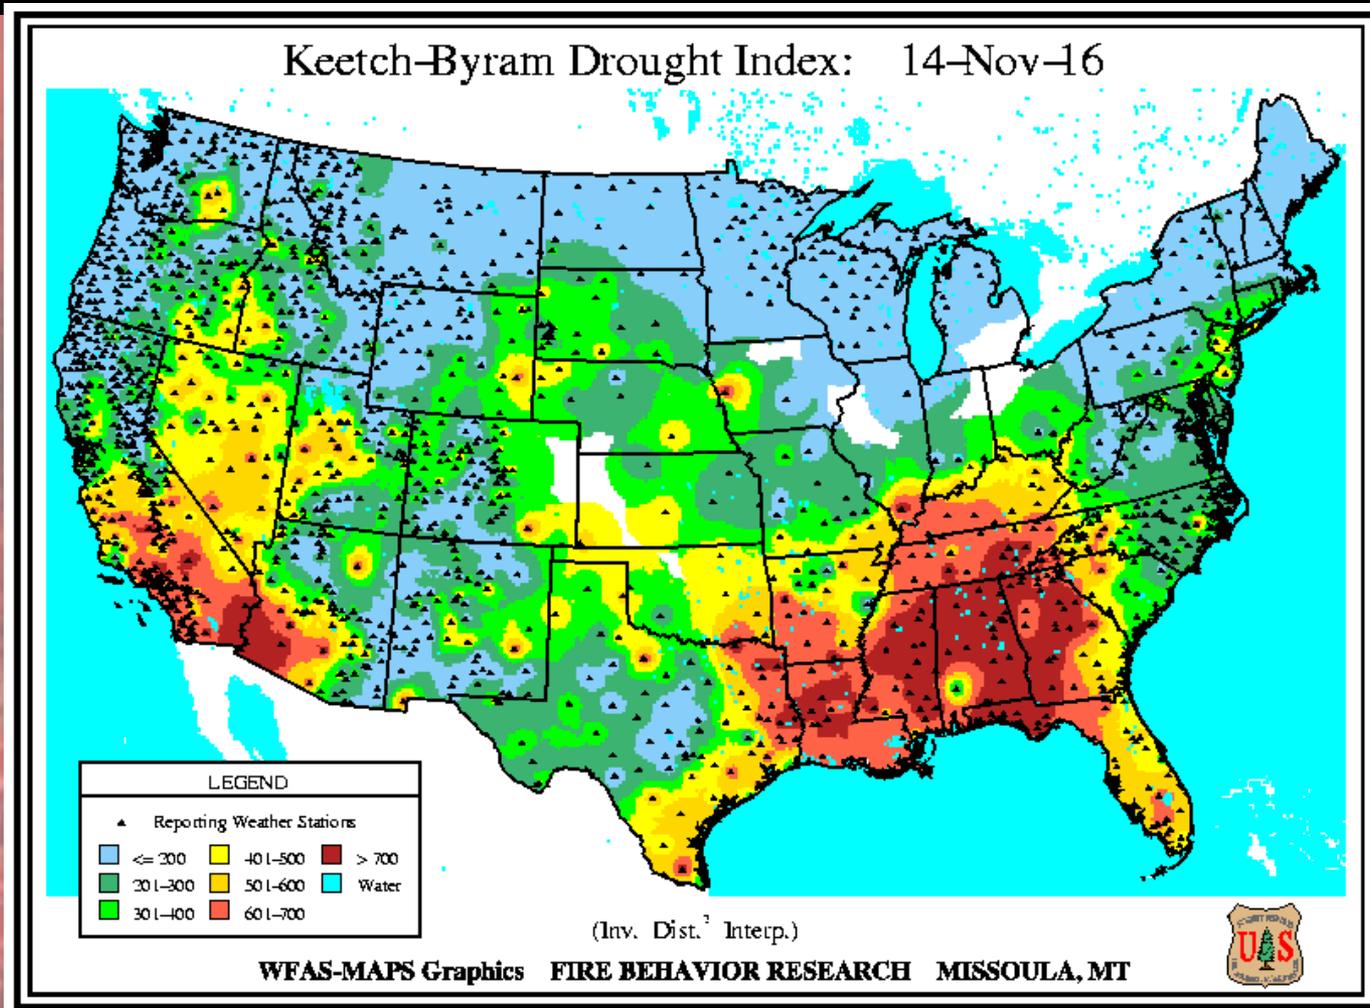

- High confidence in temperatures and overall dry forecast.
- Medium confidence in winds.

Fire Growth Potential Over the Work Week

Overview for Today – Wednesday: Near normal temperatures, relatively light winds, and higher relative humidity should keep fire growth potential lower.

Overview for Thursday – Friday: Above normal temperatures, increased winds, lower relative humidity, and dry weather could make **Friday (11/18)** the highest fire growth potential of the work week.

Keetch-Byram Drought Index

KBDI = 0 - 200: Soil moisture and large class fuel moistures are high and do not contribute much to fire intensity. Typical of spring dormant season following winter precipitation.

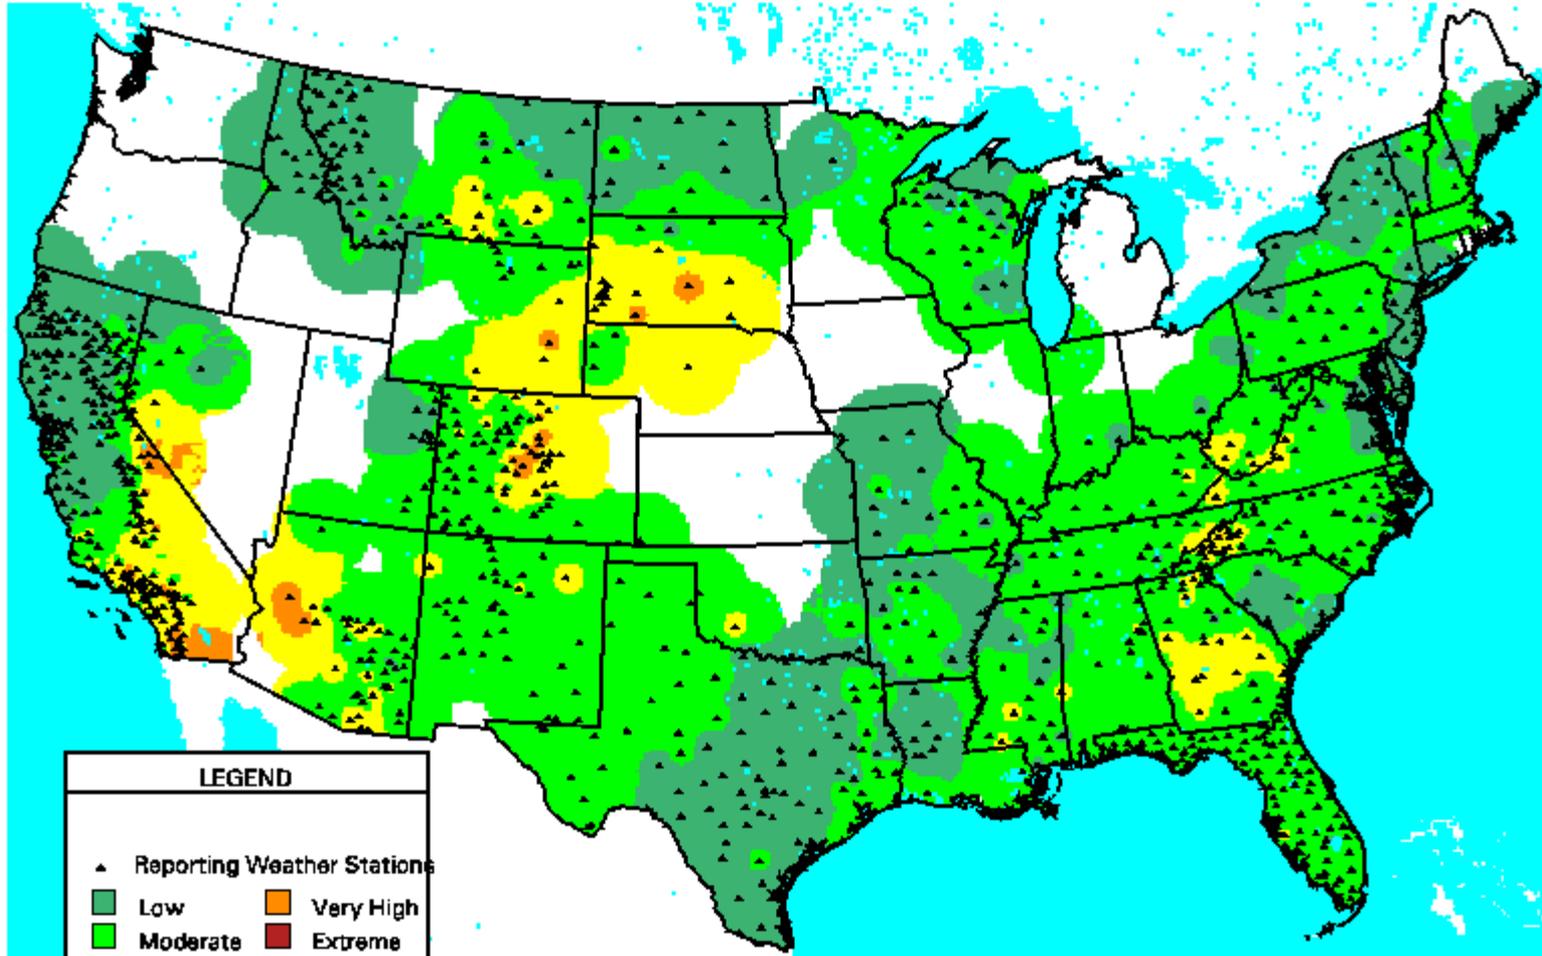

KBDI = 200 - 400: Typical of late spring, early growing season. Lower litter and duff layers are drying and beginning to contribute to fire intensity

KBDI = 400 - 600: Typical of late summer, early fall. Lower litter and duff layers actively contribute to fire intensity and will burn actively.

KBDI = 600 - 800: Often associated with more severe drought with increased wildfire occurrence. Intense, deep burning fires with significant downwind spotting can be expected. Live fuels can also be expected to burn actively at these levels.

Fire Danger Class

Forecast Fire Danger Class: 15-NOV-16

-
- **Continued dryness will lead to increased drought severity and continued dry fuels.**
 - **High confidence in dry conditions and overall light winds most of this work week.**
 - **Most concern for higher fire potential day based on winds, temperature, and relative humidity is Friday 11/18.**
 - **Lowest concern for higher fire potential will be Today – Wednesday.**
 - **More burn bans likely to be added due to worsening drought conditions.**
-
