Half dollar sized hail was reported near		F00 C0 70 001		
Half dollar sized hail was reported near CHARLES COUNTY 1.8 N LA PLATA		[38.63, -76.86]	0	Tornado (EF1, L: 8.44 mi , W: 125 yd)

National Weather Service personnel completed a ground survey along with radar analysis and concluded a tornado that peaked at low-end EF1 intensity with winds of 90 MPH produced damage along a 8.4 mile path, beginning near the intersection of U.S. Route 301 (Crain Highway) and Rosewick Road in north La Plata MD. The tornado then moved northeast lifting near the intersection of St. Peters Church Road and Gruss Farm Place in east Waldorf.

Along the tornadoes path, numerous trees were observed to have been snapped, uprooted, and toppled in multiple directions. The fallen trees downed many power lines and blocked multiple roads. Some trees and large branches also fell onto homes and garages. Minor roof damage was also observed with the removal of shingles and eaves. Some loss of insulation was observed near where the tornado peaked in intensity.

Initial concentrated path of tree damage was observed near the Rosewick Crossing Shopping Center. A narrow path of tree damage then continued northeast near White Plains Village, where minor roof damage in the form of loss of shingles and eaves was observed to several homes. The tornado then continued northeast crossing Billingsley Road near St. Charles Parkway, where more tree and minor roof damage was observed.

The tornado continued further northeast, peaking in intensity near the Smallwood Village Shopping Center and Huntington Townhouses, where the low-end EF1 damage and maximum path width of 125 yards was observed. Numerous trees were observed down across these areas with multiple instances of shingle, siding, and eave damage. It was in this area where some loss of roof insulation was observed. A light post was blown over and some windows were also blown out. Just to the northeast a car port was lifted and collapsed on a few automobiles.

The tornado then continued to create areas of minor roof and tree damage as it moved northeast, passing just to the north of the St. Peters Catholic Church, beyond there damage became more spotty, with the tornado likely lifting just to the northeast of the church near St. Peters Church Road.

A potent cold front passed through the area on the 25th. Southerly winds ahead of the boundary ushered in unusually warm and humid conditions for this time of year which led to some instability. Showers and thunderstorms developed, and this convection was able to pull down strong winds from aloft and also produce hail.

VIRGINIA, North

(VA-Z503) WESTERN HIGHLAND

02/09/17 04:00 EST 0 Winter Weather

02/09/17 19:00 EST 0

Cold and moist air moving over the mountains caused snow along and west of the Allegheny Front.

Quarter sized hail was reported near Dahlgren.

A potent cold front passed through the area on the 25th. Southerly winds ahead of the boundary ushered in unusually warm and humid conditions for this time of year which led to some instability. Showers and thunderstorms developed, and this convection was able to

Page 12 of 13 Printed on: 06/02/2017

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

pull down strong winds from aloft and also produce hail.
