07/02/22 23:30 EST Flash Flood (due to Heavy Rain) 0 07/03/22 01:45 EST 0 Source: 911 Call Center

There was a rapid rise along the Rock Creek of several feet within an hour. The water level crested at 9.12 feet at 12:15 AM EST. The water level did not fall below flood stage until 8:45 AM on the 3rd of July.

Water reached several portions of the Valley Trail between picnic areas 7 and 10 in Rock Creek Park.

A few thunderstorms produced localized gusty winds over the area waterways.

Several trees blew down northeast of the U.S. Capitol, including several onto vehicles on Morse Street Northeast.

An outbreak of significant severe weather occurred during the afternoon and evening hours of Tuesday, July 12th, 2022. An unseasonably strong cold front interacted with a high instability airmass to result in several bowing lines of thunderstorms, which maintained their organization and intensity due to strong atmospheric wind shear. Swaths of widespread damaging winds were observed, much of which was considerable. A couple of tornadoes were also confirmed, along with some significant hail. A wind gust of over 100 MPH was measured in one of the most powerful storms over eastern West Virginia.

DISTRICT OF COLUMBIA COUNTY --- 0.8 SE BROOKLAND [38.92, -76.99], 1.1 SW NATIONAL ARBORETUM [38.91, -76.99], 0.7 SW NATIONAL

ARBORETUM [38.91, -76.98], 0.7 NNW NATIONAL ARBORETUM [38.93, -76.98]

07/16/22 18:00 EST 0 Flood (due to Heavy Rain) 07/16/22 20:00 EST 0 Source: 911 Call Center

Flooding was reported on a few roads in DC, including the 1200 Block of Olivet Road Northeast, near the intersection of East Capitol Street Southeast and Benning Road Southeast. Flooding was also reported on US-1 Rhode Island Avenue Northeast near the intersection of Brentwood Road NE and 13th Street NE

An upper-level trough was overhead while a weak boundary was stalled nearby. Plenty of moisture around high pressure over the Atlantic led to the development of showers and thunderstorms. With slower storm motion, this led to instances of flooding.

Date/Time Deaths & **Event Type and Details** Location Property & Injuries Crop Dmg A supercell thunderstorm spawned a brief tornado just north of Harwood , Maryland (4 miles southwest of Londontowne) in Anne Arundel County late Tuesday afternoon July 5th, 2022, between 5:55 and 5:56 PM EDT. This supercell originally developed along the Howard/Montgomery County line as a result of a remnant mesoscale convective vortex (MCV) moving through the region which had moved through the Ohio Valley earlier in the day . It evolved into a cluster of cells initially before splitting off into an individual supercell that would develop rotation as it moved out of southeastern Montgomery County into northwestern Prince Georges County. The cell dropped a tornado earlier in the afternoon near Bowie, and would then cycle to produce the second tornado in Harwood. A broadcast media partner provided video and eyewitness evidence of a brief spin -up tornado while located at the intersection of Birdsville Road and MD-2 Solomons Island Road. This individual noted that the tornado was located just to their north in an open field and was on the ground for about one minute. Injuries Crop Dmg

An outbreak of significant severe weather occurred during the afternoon and evening hours of Tuesday, July 12th, 2022. An unseasonably strong cold front interacted with a high instability airmass to result in several bowing lines of thunderstorms, which

unseasonably strong cold front interacted with a high instability airmass to result in several bowing lines of thunderstorms, which maintained their organization and intensity due to strong atmospheric wind shear. Swaths of widespread damaging winds were observed, much of which was considerable. A couple of tornadoes were also confirmed, along with some significant hail. A wind gust of over 100 MPH was measured in one of the most powerful storms over eastern West Virginia.

Tree damage was reported near Cabins, including a tree that blew down in the 4700 block of CR-28/7 Jordan Run Road.

HAMPSHIRE COUNTY --- 2.2 NNE GLEBE [39.25, -78.84], 2.3 NNE GLEBE [39.25, -78.83]

A brief tornado caused damage at a farm on Arnold Farm Lane. Several snapped trees were noted in a tree-line a couple hundred yards to the west of the farm. An open-faced barn was destroyed; as this occurred, the roof of the barn was projected into the top of a silo, severely damaging the silo. A portion of a roof on another barn was dislodged, and the roof on the farmhouse was peeled up (but not removed).

A powerful storm tracked across southern Hampshire County on July 12th, 2022, producing a 23-mile long by 9-mile wide swath of extensive tree and property damage. The vast majority of this damage was associated with a macroburst as a bowing storm and associated rear-inflow jet tracked across the county. Winds within this 9-mile wide swath were estimated to be between 60 and 105 MPH.

Within Hampshire County, sporadic tree damage was noted as far west as Purgitsville, but more appreciable damage began in the vicinity of the South Branch of the Potomac River several miles to the south of Romney, West Virginia. Significant tree damage associated with the bowing portion of the storm extended south of Arnold Farm Lane along CR-8 South Branch River Road and CR-6 Trough Road for about four miles. Within this stretch of damage, entire corn fields were leveled just to the south of Trough View Road. Dozens of trees were blown down in this area, as well. Wind gusts were estimated to be as high as 70 MPH in this section of the county.

A powerful storm tracked across southern Hampshire County on July 12th, 2022, producing a 23-mile long by 9-mile wide swath of extensive tree and property damage. The vast majority of this damage was associated with a macroburst as a bowing storm and associated rear-inflow jet tracked across the county. Winds within this 9-mile wide swath were estimated to be between 60 and 105 MPH.

The storm progressed into the valley between Nathaniel Mountain and Short Mountain between about 3:43 and 3:53 PM EDT. Extensive tree damage was observed throughout this valley over a several mile long swath extending from north to south. The most extensive damage was observed just north of Kirby. Hundreds of trees were either snapped or uprooted, and a high level of defoliation was observed on any trees that remained due to wind-driven hail. Two-inch diameter hail was observed near Kirby, and accumulating golf ball size hail was observed near Hampshire Gas Company off of Grass Lick Road. Significant hail damage occurred at Hampshire Gas Company. A personal weather station measured a wind gust of 89 knots (102 MPH) just to the north of Hampshire Gas Company, while a weather station on site at Hampshire Gas Company failed in the wind-driven hail. The maximum level of defoliation was noted in the vicinity of where the 102 MPH gust was recorded and where the accumulating golf ball size hail was observed. Most of this area likely observed winds of 75 to 90 MPH, with winds in excess of 100 MPH being localized to near the sensor immediately in the lee of Nathaniel Mountain.

Numerous trees blew down north of Berkeley Springs, including along CR-1 River Road, US-522 Hancock Road, CR-2 Fairview Drive, and CR-4 Pious Ridge Road.

A cold front sparked showers and thunderstorms, some of which became severe resulting in scattered instances of wind damage.
