	06/18/23 01:13 CST		0	Source: NWS Storm Survey

This tornado started north of Highway 60 near the Perry/Faulkner County line. Visible damage started between Fox Lane and Elm Lane ending near Ferry Boat Road. Damage was observed to the roof of small outbuildings and homes. A chicken coop was blown apart with a portion of the chicken coop being blown into the window of a manufactured home. A carport was blown sideways, but remained attached. Additionally observed was damage to several trees. This tornado dissipated shortly before crossing the Arkansas River between Perry County and Faulkner County; however, the tornado never crossed into Faulkner County. This tornado had estimated winds of 85 mph and was rated EF-0.

Multiple trees and powerlines were blown down in Booneville.

An upper level storm system via a powerful jet axis moved around the periphery of High Pressure and drove a cold front into a very unstable atmosphere which provided the lifting mechanism for air parcels which would become severe thunderstorms. The cold front arrived during the heating of the day and plenty of CAPE was present to promote powerful updrafts that would suspend large hailstones. The collapsing of storms created a rush of cooler air (outflow) sending other storms downstream that would produce damaging winds. A couple embedded tornadoes were also noted during this period given the favorable atmosphere across central Arkansas.
