

Regional Climate Summary

March 2023

Weather Forecast Office
Midland/Odessa, TX
Issued April 8, 2023 11:52 PM CT

The windy season ramped up in March as multiple storm systems moved through the area, bringing bouts of strong winds to portions of West Texas and Southeast New Mexico. Monthly temperatures ended up near or slightly above normal in most locations besides the Marfa Plateau and Presidio Valley where temperatures remained well below normal. An impressive mid-March snowstorm brought several inches of snow to the Big Bend region, Presidio Valley, and the Davis Mountains. Unfortunately, this was the only beneficial moisture that our region experienced throughout the month and the rest of the area saw less than 5% of normal precipitation. The second half March was otherwise warm and dry, bringing average temperatures back towards normal.

Midland Int'l Airport March Statistics:

- Warmest Day: 87°F on the 11th
- Coldest Night: 30°F on the 19th
- Average Temperature: 57.4°F (Normal: 58.0°F)
- Precipitation Total: Trace (Normal: 0.68")
- Snowfall Total: 0.0"
- Highest Wind Gust: 63 mph on the 2nd
