APPLICATIONS OF THE MOS TECHNIQUE: A BIBLIOGRAPHY--No. 1

Gary M. Carter, Joseph R. Bocchieri,
and J. Paul Dallavalle

1. INTRODUCTION

For more than 10 years, the National Weather Service has provided its field forecasters and various other users of weather information with objective weather guidance based on the Model Output Statistics (MOS) technique. Surface wind (direction and speed) for several stations in the eastern United States was the first weather element for which MOS forecasts were provided on an operational basis. This guidance, first issued in 1968, relied primarily on output from the Techniques Development Laboratory's (TDL's) Subsynoptic Advection Model (SAM). Later, probability of precipitation and precipitation type forecasts were added to the SAM guidance package. In 1972, probability of precipitation guidance based on output from the National Meteorological Center's six-layer coarse mesh Primitive Equation (PE) model was provided for many locations throughout the conterminous United States. Later, as indicated in Table 1, many other elements were added, and the Limited-area Fine Mesh (LFM) model became the main source of input for the MOS prediction equations.

Table 1. Approximate month and year of operational implementation for various types of MOS guidance for locations throughout the United States.

Weather Element	PE-based Guidance	LFM-based Guidance
Probability of Precipitation	January 1972	February 1976
Precipitation Amount	October 1977	October 1977
Precipitation Type	November 1972	February 1976
Snow Amount	--	October 1977
Thunderstorm/Severe Local Storms		
Short-range	--	April 1974
Medium-range	May 1973	April 1978
Maximum/Minimum Temperature	August 1973	February 1976
3-hourly Temperature	--	June 1978
3-hourly Dew Point	--	April 1980
Surface Wind	May 1973	February 1976
Cloud Amount	December 1974	February 1976
Ceiling/Visibility	October 1974	February 1976
Obstructions to Vision	--	April 1980

This bibliography is an attempt to document applications of the MOS technique to weather forecasting. The entries have been arranged by broad categories such as general reference articles and verification reports or according to the type of weather element. No article is referenced more than once. Within each subsection, the entries are arranged in alphabetical order by last name of the (first) author, and for each author, the entries are in chronological order. The double asterisk denotes the most current and comprehensive references in each particular subsection.

The vast majority of the authors are (or were) members of TDL. The listing for TDL authors is nearly exhaustive. The last section is devoted specifically to non-TDL applications.

We plan to revise and update the bibliography on an annual basis.

_____, 1977b: The use of Model Output Statistics for predicting ceiling, visibility, and cloud amount. NWS Technical Procedures Bulletin No. 193, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 15 pp.

_____, 1978: The use of Model Output Statistics for predicting ceiling, visibility, and cloud amount. NWS Technical Procedures Bulletin No. 234, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 14 pp.

_____, 1980: The use of Model Output Statistics for predicting probability of nonprecipitating obstructions to vision. NWS Technical Procedures Bulletin No. 284, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 6 pp.**

_____, 1981: The use of Model Output Statistics for predicting ceiling, visibility, cloud amount, and obstructions to vision. NWS Technical Procedures Bulletin No. 303, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 11 pp.**

H. Agricultural Applications

1. Specialized Guidance

Carter, G. M., and J. S. Jensenius, Jr., 1977: Experimental rate of pan evaporation forecasts. TDL Office Note 77-13, National Weather Service, NOAA, U.S. Department of Commerce, 10 pp.

Jensenius, J. S., Jr., E. A. Zurndorfer, and G. M. Carter, 1978: Specialized agricultural forecast guidance for Michigan and Indiana. TDL Office Note 78-9, National Weather Service, NOAA, U.S. Department of Commerce, 12 pp.

_____, and G. M. Carter, 1978a: Experimental rate of pan evaporation forecasts--phase II. TDL Office Note 78-10, National Weather Service, NOAA, U.S. Department of Commerce, 13 pp.

_____, and G. M. Carter, 1978b: Ground condensation guidance for Indiana and Michigan. TDL Office Note 78-12, National Weather Service, NOAA, U.S. Department of Commerce, 13 pp.**

_____, and G. M. Carter, 1979a: Automated forecasts of agricultural weather elements. Preprints Fourteenth Conference on Agriculture and Forest Meteorology, Minneapolis, Amer. Meteor. Soc., 42-44.

_____, and G. M. Carter, 1979b: Specialized agricultural weather guidance for South Carolina. TDL Office Note 79-15, National Weather Service, NOAA, U.S. Department of Commerce, 16 pp.**

_____, and V. J. Dagostaro, 1980: Specialized agricultural weather guidance for Kentucky. TDL Office Note 80-5, National Weather Service, NOAA, U.S. Department of Commerce, 8 pp.**

2. Solar Energy

Jensenius, J. S., Jr., and G. F. Cotton, 1981: The development and testing of automated solar energy forecasts based on the Model Output Statistics (MOS) technique. Proceedings First Workshop on Terrestrial Solar Resource Forecasting and on Use of Satellites for Terrestrial Solar Resource Assessment, Washington, Amer. Sect. Int. Solar Energy Soc., 22-29.

National Weather Service, 1981: Solar energy guidance. NWS Technical Procedures Bulletin No. 304, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 5 pp.

_____, 1982: Solar energy guidance. NWS Technical Procedures Bulletin No. 313, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 5 pp.**

I. Alaskan Guidance

Carter, G. M., 1976: Automated prediction of surface winds in Alaska--No. 1. TDL Office Note 76-15, National Weather Service, NOAA, U.S. Department of Commerce, 11 pp.

_____, 1977a: Automated prediction of surface winds in Alaska--No. 2. TDL Office Note 77-1, National Weather Service, NOAA, U.S. Department of Commerce, 11 pp.

_____, 1977b: Automated prediction of surface winds in Alaska--No. 3. TDL Office Note 77-7, National Weather Service, NOAA, U.S. Department of Commerce, 12 pp.

_____, 1977c: Automated prediction of surface winds in Alaska--No. 4. TDL Office Note 77-15, National Weather Service, NOAA, U.S. Department of Commerce, 5 pp.

Dallavalle, J. P., 1979: Development of objective maximum/minimum temperature forecast equations for Alaska. TDL Office Note 79-16, National Weather Service, NOAA, U.S. Department of Commerce, 28 pp.

Gilhousen, D. B., 1977a: Automated prediction of probability of precipitation (PoP) in Alaska--summer season. TDL Office Note 77-8, National Weather Service, NOAA, U.S. Department of Commerce, 11 pp.

_____, 1977b: Automated prediction of probability of precipitation (PoP) in Alaska--fall season. TDL Office Note 77-11, National Weather Service, NOAA, U.S. Department of Commerce, 6 pp.

_____, 1977c: Automatic prediction of the conditional probability of frozen precipitation for Alaska. TDL Office Note 77-12, National Weather Service, NOAA, U.S. Department of Commerce, 9 pp.

Hanas, R. L., 1975: The MOS approach to automated Alaskan temperature prediction. Weather Service Forecast Office, Anchorage, Alaska, 14 pp. (Unpublished report available on request from Techniques Development Laboratory, National Weather Service Headquarters, Silver Spring, Md.)

Maglaras, G. J., 1982: Development of an improved automated system for forecasting the probability of precipitation in Alaska. TDL Office Note 82-9, National Weather Service, NOAA, U.S. Department of Commerce, 17 pp.**

National Weather Service, 1977a: Alaskan maximum/minimum temperature and surface wind forecasts, FMAK1 bulletin. NWS Technical Procedures Bulletin No. 192, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 4 pp.

_____, 1977b: Alaskan maximum/minimum temperatures, surface wind, and probability of precipitation, FMAK1 bulletin. NWS Technical Procedures Bulletin No. 202, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 5 pp.

_____, 1977c: Alaskan maximum/minimum temperatures, surface wind, probability of precipitation, and conditional probability of frozen precipitation (PoF), FMAK1 bulletin. NWS Technical Procedures Bulletin No. 208, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 5 pp.

_____, 1979: Alaskan maximum/minimum temperatures, surface wind, probability of precipitation, conditional probability of frozen precipitation, ceiling, visibility, and cloud amount--FMAK1 bulletin. NWS Technical Procedures Bulletin No. 262, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 7 pp.

_____, 1981: The use of Model Output Statistics for predicting probability of nonprecipitating obstructions to vision in Alaska. NWS Technical Procedures Bulletin No. 296, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 6 pp.

_____, 1982: Alaskan temperature, surface wind, probability of precipitation, conditional probability of frozen precipitation, and cloud amount guidance (FMAK1 bulletin). NWS Technical Procedures Bulletin No. 317, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 14 pp.**

J. Non-TDL Applications

Baker, D. G., and G. Weber, 1979: Development of techniques for objective maximum/minimum guidance for zone forecasts. Final Report No. 0501-7199-3536 to Department of Commerce, National Weather Service. Department of Atmospheric and Oceanic Science, College of Engineering, University of Michigan, 127 pp.
