

NWS Melbourne Website Updated September 27th

All websites in the Southern Region of the National Weather Service transitioned to a new Content Management System (CMS) that included transitioning office web pages from srh.noaa.gov to weather.gov servers. This included a migration of office web pages and all content hosted on our web site to weather.gov.

The NWS Melbourne website has changed from:

<http://www.srh.noaa.gov/mlb>  <http://www.weather.gov/mlb>

Please update your bookmarks to our new web address.

Individual pages will now not include **?n=** in the web address. We have attempted to keep the remainder of web page names as close as possible to the previous address.

For example:

<http://www.srh.noaa.gov/mlb/?n=marine>  <http://www.weather.gov/mlb/marine>

Some of our most popular pages will have automatic redirects for a few months to the new page. Many of our site links will move to the drop down menus above the Watch/Warning/Advisory map and also at the bottom of the page in the site map section.

For our SKYWARN spotters and those interested in becoming a SKYWARN weather spotter:

Our SKYWARN Training class information has now moved to:

<http://www.weather.gov/media/mlb/skywarnclasses.pdf>

We apologize for the inconvenience and appreciate your patience as we go through this transition. If you note any missing web pages or content on our website or have any other questions or concerns, please contact our webmaster at:

sr-mlb.webmaster@noaa.gov
