

A black and white photograph of a snowy forest path. The path is covered in snow and has a series of footprints leading away from the viewer. The trees on either side are bare and heavily laden with snow. In the bottom left corner, the back of a black dog is visible, looking towards the path. The overall scene is a serene winter landscape.

# 2016-2017 Winter Outlook

National Weather Service  
Twin Cities, MN

# Coming Winter

**Cooler Temperatures** Likely

Likely Near to Below Normal

**More Snowfall** Likely  
Likely Near to Above Normal  
(Normal is 50"- 55")

# Last Winter

**Temperatures** were warm

5 to 7 degrees **above normal**

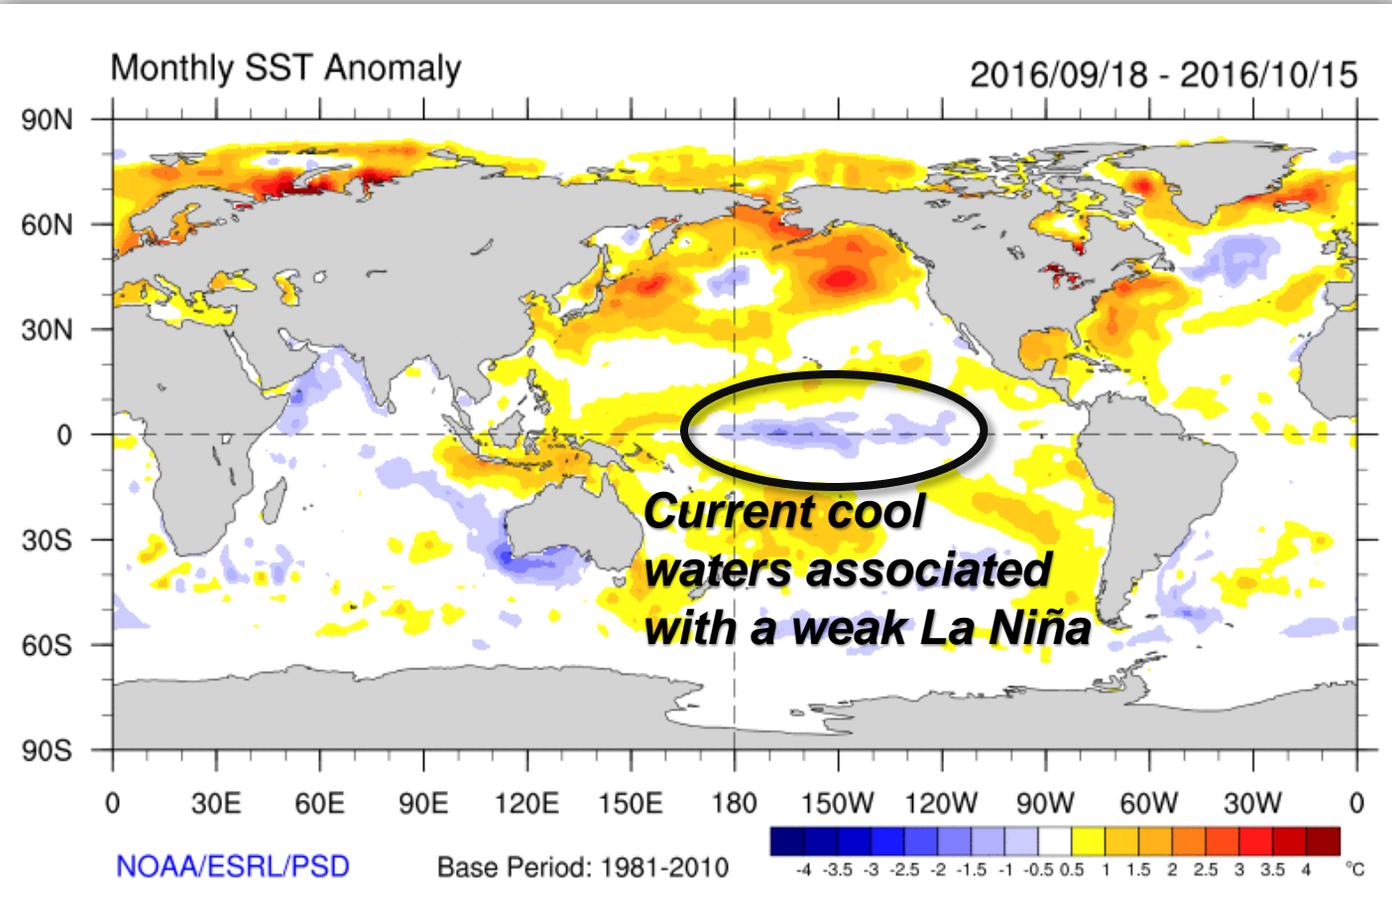

**Snow totals** were low: 30"- 36"

10"- 20" **below normal**

# 2016-2017 Winter Outlook

## Expected El Niño/La Niña Conditions

### Forecast El Niño/La Niña Conditions:

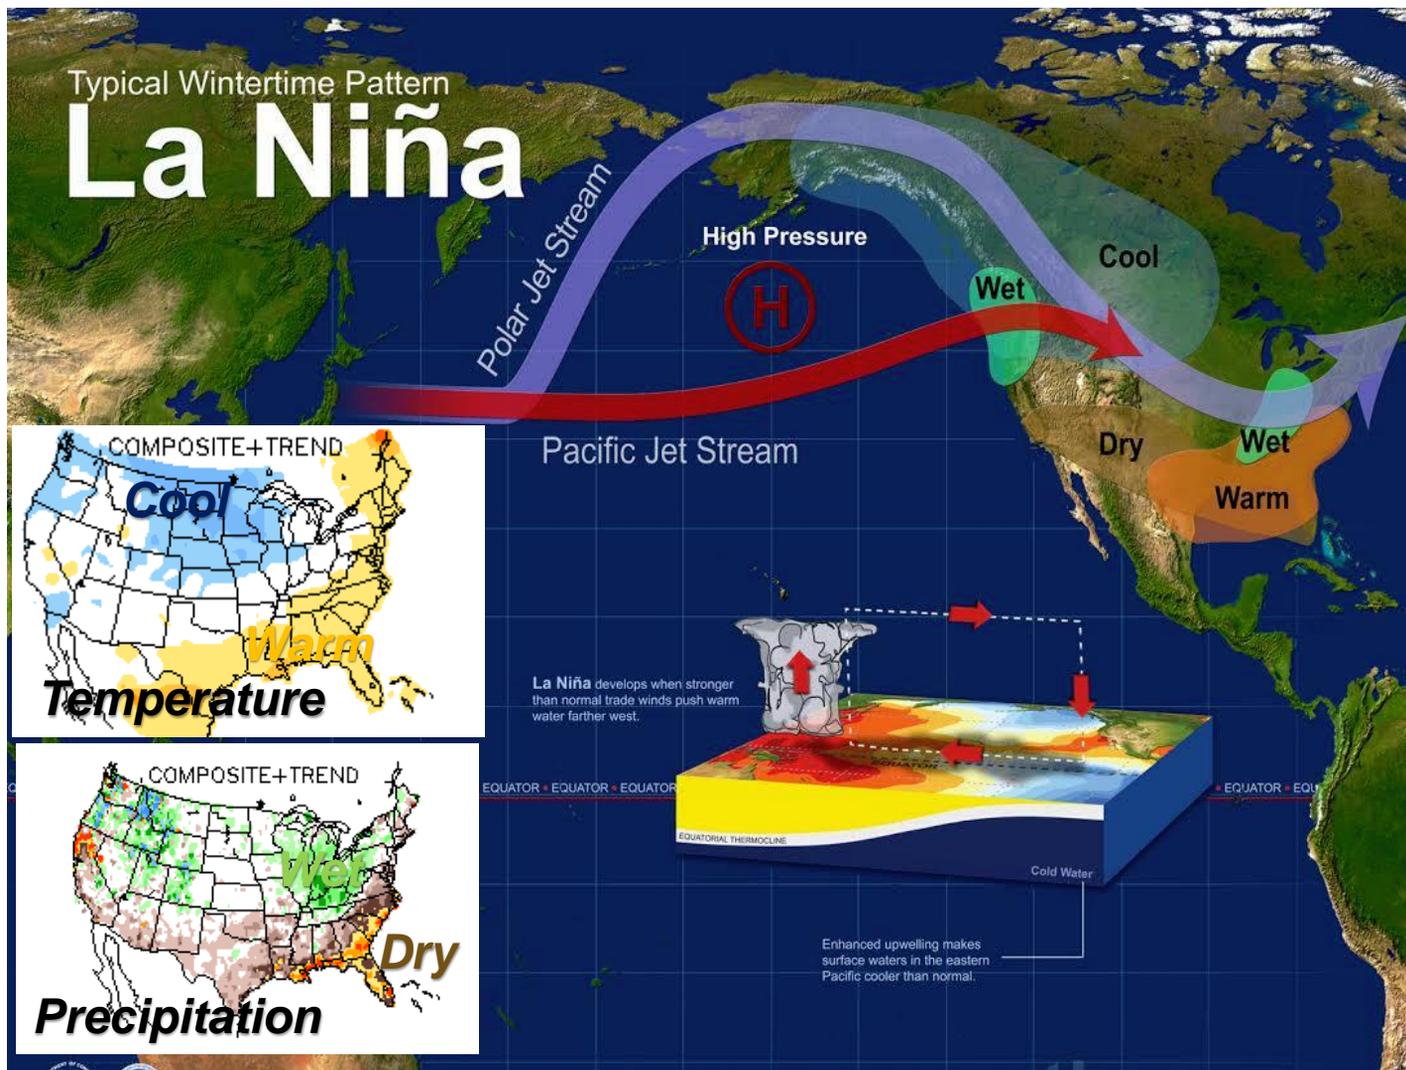

- Current borderline La Niña conditions expected to continue through this winter
- Climate Prediction Center (CPC) currently has a La Niña watch in place for the winter
  - Conditions favorable for the development of a La Niña within the next 6 months

For updated forecast details at your location, please visit [www.weather.gov/mpx](http://www.weather.gov/mpx)

# 2016-2017 Winter Outlook

## Typical Impacts of a La Niña

### Typical La Niña Impacts:

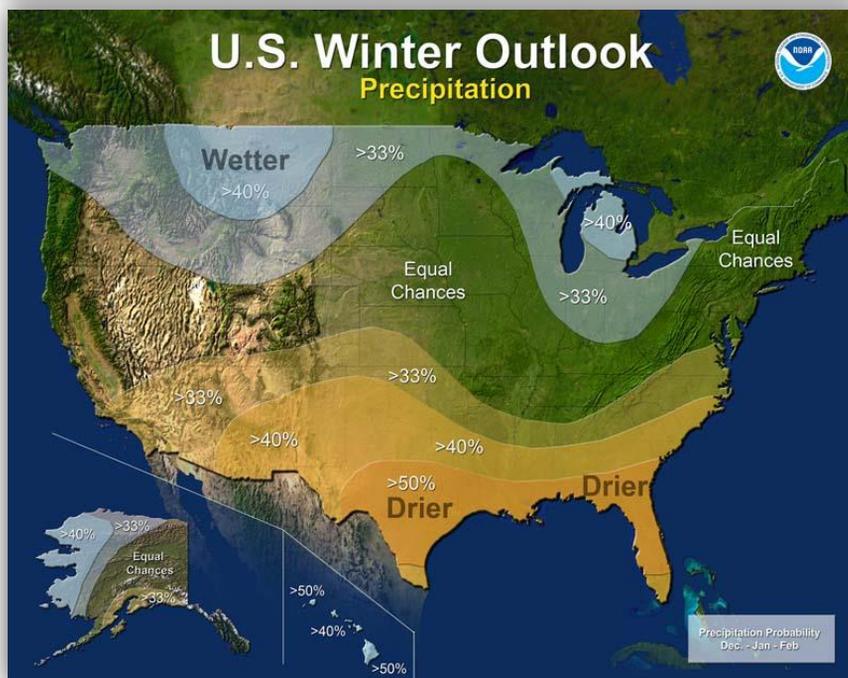

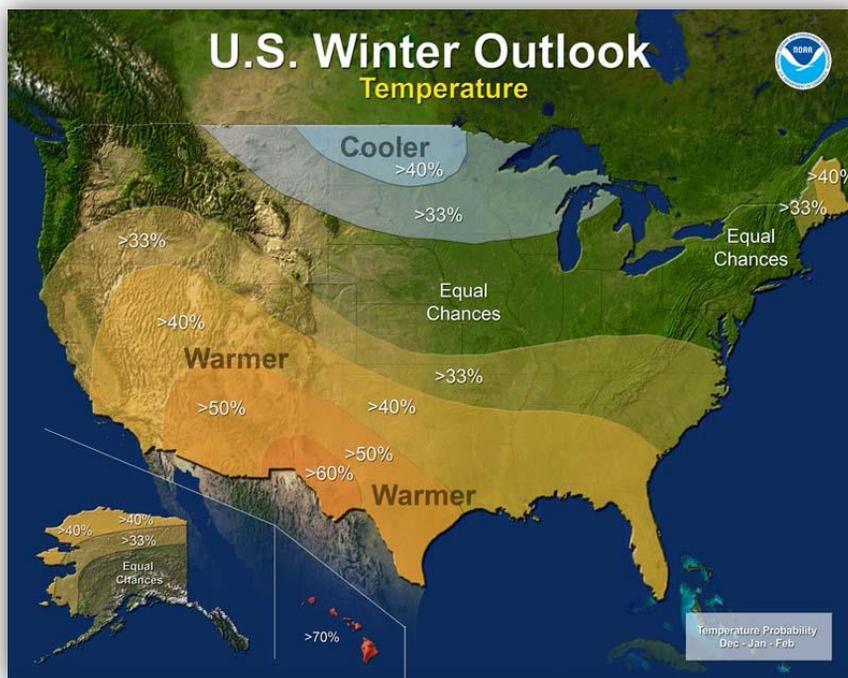

- Weaker jet stream across the Pacific Ocean allows for ridging to develop in the northern Pacific Ocean
- This ridge sends the jet stream into Alaska, capturing cold air as it does so before it dives back south across North America, bringing the cold air with
- Typical La Niña winters locally favor:
  - Bouts of cold arctic air outbreaks
  - A more active storm track across the northern Plains, which favors more frequent snowfalls

# 2016-2017 Winter Outlook

## What have past neutral/La Niña winters following an El Niño winter been like in the Twin Cities

- There have been 10 winters since 1950 where we have had neutral or weak La Niña conditions follow an El Niño the previous (winter seasons in chart)
- +/- in chart below represents a comparison of the winter shown with the El Niño winter from the year before (i.e. the -5.8 and +44.8 for 1964-1965 represent the difference for these values compared to the El Niño winter of 1963-1964)

Winter Seasons	Average Temp and Difference from previous EN winter	Season Snowfall and Difference from previous EN winter
1959-1960	21.8° (+7.3)	31.8" (+12.7)
1964-1965	12.2° (-5.8)	73.7" (+44.8)
1966-1967	13.8° (-2.1)	78.4" (+42.3)
1978-1979	9.4° (-1.1)	68.4" (+17.7)
1980-1981	20.4° (+1.5)	21.1" (-32.2)
1983-1984	14.3° (-5.7)	98.6" (+24.2)
1992-1993	17.7° (-6.0)	47.4" (-36.7)
2003-2004	19.3° (+0.2)	66.3" (+31.3)
2005-2006	22.7° (+1.2)	44.4" (+18.9)
<b>Normal</b>	<b>18.3°</b>	<b>54.4"</b>

### So what does this mean for this winter?

- High confidence we will see more snow than last winter (likely above normal as well)
- High confidence we will be colder than last winter (likely have temperatures within a degree of normal)
