

# May 6, 2003 Tornado Outbreak

The night of May 6, 2003 will long be remembered in southern Illinois, southeast Missouri, and western Kentucky for the devastation, injuries, and two fatalities wrought by a series of tornadoes. See the map below for tornado tracks and intensities for the entire outbreak.

# May 6, 2003 Tornado Outbreak

The strongest, most destructive, and deadliest tornado of the night was rated F-4, with peak winds near 210 MPH. This tornado tracked 33 miles across the southernmost counties of Illinois (see map above). Below are damage photos from this tornado, which claimed two lives and injured dozens more. The first two photos are of a permanent home near Hillerman in western Massac County that was swept clean off its foundation. The occupants of this home survived.

The occupant of a mobile home in the same area was not as fortunate. The first photo below shows the frame of the mobile home wrapped around two trees that were stripped of all their limbs. The second photo shows part of an overturned train between Hillerman and the Mermet Lake Conservation Area, located just west of U.S. Route 45.

## SUMMARY of F-2 or stronger tornadoes

F-4 (207-260 MPH) - ILLINOIS - PULASKI, MASSAC, POPE COUNTIES	932-1042PM
F-3 (158-206 MPH) - MISSOURI - CITY OF JACKSON, MO	845PM
F-2 (113-157 MPH) - ALEXANDER CO., IL / MISSISSIPPI CO., MO / BALLARD CO., KY	1027PM
F-2 - BOLLINGER CO., MO	804PM

- **F-4 in southern Illinois...** The most intense tornado of the event began near the Ohio River in Pulaski County, Illinois and peaked at F4 intensity as it crossed western Massac County. The tornado killed two persons before entering Pope County and ending near the Ohio River at Golconda. This tornado was only the second F-4 tornado (winds 207-260 MPH) in the Paducah County Warning Area since 1990. Despite the very rural character of the tornado-ravaged area, about 125 homes were destroyed and at least another 150 were damaged. The maximum intensity of the tornado occurred west of Interstate 24 in Massac County, where F-4 winds swept a permanent home off its foundation into a creek. The residents of that house were among 38 persons injured in this 33-mile long tornado. The tornado blew over railroad cars of a passing train as it neared the Mermet Lake Conservation Area off U.S. Route 45. Both fatalities occurred prior to this point in the tornado's track. The tornado crossed Interstate 24 less than a mile south of the New Columbia/Big Bay exit in Massac County, near mile marker 28. Tractor-trailer rigs and a tour bus were overturned on the interstate, with injuries reported. The tornado crossed Illinois Route 145 right near the Pope/Massac County line. The tornado destroyed mainly farmhouses and farm buildings in rural Pope County. As the tornado reached the Golconda area, the Pope County High School and Elementary School sustained minor to moderate damage. The tornado finally dissipated about a mile north of Golconda just before the parent storm crossed the Ohio River into Kentucky.

- **Fatalities:** In eastern Pulaski County, a 53-year-old male was killed when the chimney of his house collapsed on him. The man was protecting his son by lying on top of him when the collapse occurred. The son received only broken bones. In western Massac County, near the Hillerman and Mermet communities, a 65-year-old female was found dead in a ravine about 100 yards from her mobile home. The frame of the mobile home was wrapped around the trunks of two trees.
- **The F-3 tornado that struck Jackson, MO** was likely spawned by the same supercell thunderstorm that produced both tornadoes in Bollinger County and another in far western Cape Girardeau County. This tornado was on the ground for about 2 miles. There were two injuries and zero deaths. Two homes were destroyed, vehicles were tossed, and many buildings were damaged.
- **F-2 tornado at Cairo, IL...** A fairly long-track F-2 tornado was spawned just west of Cairo, Illinois in Alexander County. It tracked through Cairo, producing F-2 damage there. The tornado path clipped extreme northern Mississippi County, Missouri, before entering Ballard County, Kentucky. The tornado produced mainly F-0 and F-1 damage across southern Ballard County. The path ended in extreme southeast Ballard County, not far from Lovelaceville. The parent storm went on to produce F-0 and F-1 tornadoes near the McCracken/Graves County line and in Marshall County.
- **F-2 tornado in Bollinger County, MO...** Just south through southeast of Grassy, Missouri, a F-2 tornado heavily damaged a home. The damage track was entirely in Bollinger County. This was the first significant tornado of the May 6-7 outbreak.

TORNADO WATCH FOR PORTIONS OF

SOUTHERN ILLINOIS  
EXTREME SOUTHWEST INDIANA  
WESTERN KENTUCKY  
EAST AND SOUTHEAST MISSOURI

EFFECTIVE THIS TUESDAY AFTERNOON FROM 540 PM UNTIL MIDNIGHT CDT.

TORNADOES...HAIL TO 3 INCHES IN DIAMETER...THUNDERSTORM WIND GUSTS  
TO 90 MPH...AND DANGEROUS LIGHTNING ARE POSSIBLE IN THESE AREAS.  
THE TORNADO WATCH AREA IS ALONG AND 85 STATUTE MILES NORTH AND  
SOUTH OF A LINE FROM 70 MILES SOUTH SOUTHWEST OF SAINT LOUIS  
MISSOURI TO 10 MILES NORTH OF OWENSBORO KENTUCKY.

REMEMBER...A TORNADO WATCH MEANS CONDITIONS ARE FAVORABLE FOR  
TORNADOES AND SEVERE THUNDERSTORMS IN AND CLOSE TO THE WATCH AREA.  
PERSONS IN THESE AREAS SHOULD BE ON THE LOOKOUT FOR THREATENING  
WEATHER CONDITIONS AND LISTEN FOR LATER STATEMENTS AND POSSIBLE  
WARNINGS.

OTHER WATCH INFORMATION...CONTINUE...WW 269...WW 270...WW 271...WW  
272...WW 273...WW 274...

DISCUSSION...THE ENVIRONMENT ACROSS ERN MO/SRN IL/WRN KY APPEARS  
FAVORABLE FOR THE MAINTENANCE OF THE INTENSE SUPERCELL/BOW ECHO  
CLUSTER NOW ACROSS CENTRAL MO. EXPECT THESE STORMS TO MOVE ESEWD  
ALONG THE OUTFLOW BOUNDARY FROM ERN MO TO SRN IL/WRN KY WHERE NEAR  
70 DEWPOINTS ARE SUPPORTING MLCAPE NEAR 2500 J/KG...AND VERTICAL  
SHEAR IS QUITE FAVORABLE FOR SUPERCELLS. THE DEGREE OF  
INSTABILITY/SHEAR AND THE MESOSCALE ORGANIZATION OF THE STORMS  
SUGGESTS THE POSSIBILITY OF VERY LARGE/DAMAGING HAIL AND INTENSE  
OUTFLOW WINDS WITH THE EMBEDDED SUPERCELLS...IN ADDITION TO THE  
THREAT OF TORNADOES.

AVIATION...TORNADOES AND A FEW SEVERE THUNDERSTORMS WITH HAIL  
SURFACE AND ALOFT TO 3 INCHES. EXTREME TURBULENCE AND SURFACE WIND  
GUSTS TO 80 KNOTS. A FEW CUMULONIMBI WITH MAXIMUM TOPS TO 600.
