## Storm Hazard Risks

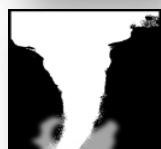

Elevated

Very Large Hail to the Size of Baseballs

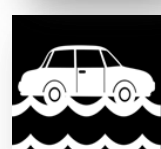

Elevated

Damaging Winds up to 70 mph

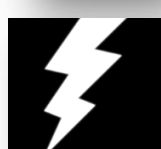

Limited

Tornadoes Possible

Limited

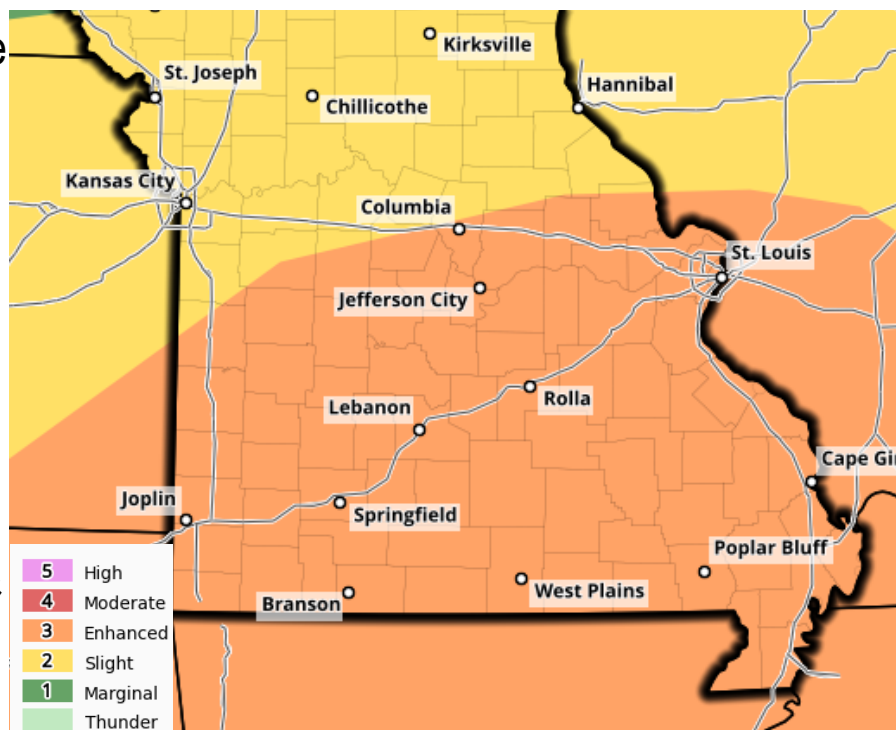

Locally Heavy Rain & Localized Flooding

Significant

Frequent Lightning

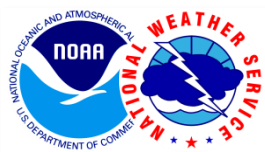

## SPC Severe Storm Outlook Saturday

## Outlook:

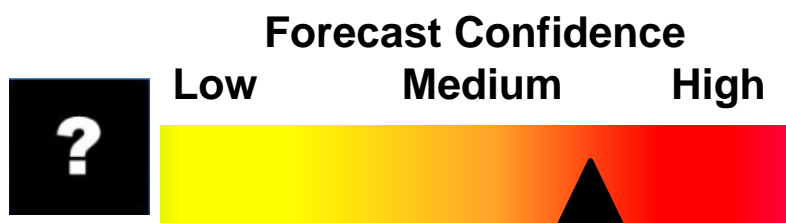

The potential for severe storms continues to increase for Saturday with a chance of storms beginning by later Friday. **The greatest coverage of storms and highest risk for severe weather will be Saturday afternoon and evening.**

A CAP or warm air layer aloft will suppress thunderstorm development Friday through midday Saturday but there will be a risk for severe weather if storms can develop. Rapid development of severe storms is expected later Saturday afternoon and evening given a very unstable airmass. Atmospheric conditions will support very large hail. There is a conditional risk for tornadoes that will depend on the orientation low level winds and boundaries. Stay tuned to the latest weather information.

### NWS Partners:

- Monitor for forecast updates. Severe weather may be possible as early as Friday, but is more likely Saturday and Saturday night.
- Is your NWS Chat account up to date? Can you log in? Test it before the weather hits. <https://nwschat.weather.gov/>
- Have multiple sources of weather watch, warning, and radar data available via computer and mobile apps. Check communications.
- We will host Facebook Live briefings periodically including Thursday at 7 pm.
