

I.4 DATA TYPE AND UNIT CODES

There are many different types of data used in the NWSRFS models.

Each type of data can be stored using one of several data units. The system can store data in both metric and non-metric units and can convert from one to the other.

This Chapter describes the available:

- o Operational Forecast System Preprocessor Data Base daily data type codes
- o Operational Forecast System Preprocessor Data Base river, reservoir and snow data type codes
- o Calibration System historical data and Operational Forecast System Processed Data Base time series data type codes
- o data unit codes
