### Potential Impacts Color Table

- **Limited (Common)**
- **Minor (Common)**
- **Moderate (Uncommon)**
- **High (Rare Event)**
- **Extreme (Very Rare Event)**

*Important: Weather conditions and forecasts can change significantly in a short period of time. Please stay up-to-date at weather.gov/abq*

*This product is for situational awareness and is intended to be used alongside more detailed forecast products*
Key Impacts:

- Increased coverage of strong to severe storms over eastern areas today with heavy downpours, large hail and damaging winds possible.
- A few storms north of Highway 60 and west of the central mountain chain will produce dry lightning with a risk of localized damaging wind gusts, mainly today and Tuesday. Potential for new wildfire starts.
- Strong storms could return to northeast NM Friday evening.
- Hot temperatures reaching close to record values through much of next week. Increased risk of heat-related illness each day, especially in lower elevation valleys and parts of the eastern plains.
