

SPOT Forecast Page Review

Michael Main, NWS Albany

New Spot Page: Overview

- New Link: <https://spot.weather.gov/>
- Somewhat similar to the legacy spot forecast page
- Developed due to previous IT infrastructure falling out of date

New Spot Page: Important Points

- The new spot page should still have the same functionality as the old page, but a few bugs are still being worked out
- Please feel free to use the remarks section to let us know of any main concerns or special requests not typically included a spot forecast
- <https://www.weather.gov/fire/training> has a list of known issues that are being worked on and that have already been fixed
- **If you have any spot forecast questions or issues, please feel free to call us**
