U Of I Institute Cautions
Owners Of Riding Mowers

IOWA CITY—The University of
Iowa's Animal Research Laboratory warns of the pos-
ible dangers involved in using riding mowers,
and urges the owners to be careful.

The laboratory points out that riding mowers
are now being used extensively in the area,
and that many owners are not aware of the
dangers involved.

The laboratory warns that riding mowers
are not necessarily safe, and that accidents can
occur if proper precautions are not taken.

The laboratory recommends that owners
follow the safety guidelines provided by the
manufacturer, and that they keep the mowers
in good working order.

The laboratory also recommends that owners
consider using alternative methods of
access to their lawns, such as foot-powered
mowers or manual labor.

The laboratory is continuing its
research on the risks associated with riding
mowers, and will be releasing updates in the
near future.

The laboratory is available for further
information or assistance.
