Storm Data and Unusual Weather Phenomena - June 2024

Large tree limbs were blown down.

Thunderstorms developed during the afternoon and evening hours as a surface trough and upper level short wave trough moved through the area. Some of the storms became severe with the initial threat being large hail, with the largest hail the size of tennis balls in Hettinger County to the west of Lake Tschida. Later in the event, damaging wind gusts became the main concern. The greatest reported damage was in the Turtle Mountains region of north central North Dakota, where a movie drive in restaurant was severely damaged near Lake Metigoshie, and near Belcourt where a home, playground equipment, and trees were damaged.

Thunderstorms developed as surface low pressure deepened over eastern Montana and a warm front lifted through North Dakota. The main threat from the storms was damaging winds, with the strongest winds of 90 mph occurring in Stark County. Buildings, trees, and crops were damaged. Two tornadoes were reported, with one near Trotters in Golden Valley County and the other near South Heart in Stark County. Both tornadoes occurred in open fields with no damage to evaluate, and so were rated EFU (Unknown) by National Weather Service policy. Although damaging winds were the main threat, some large hail did occur. The largest hail was the size of ping pong balls, and fell in Stark County.
