

POST TROPICAL CYCLONE REPORT

Storm Name	Isaias
NWS Office	Birmingham
Begin/End Date	10/9/2026 - 10/10/2026
Fatalities	1 - Direct 1 - Indirect
Tornadoes	0

Event Summary

Hurricane Isaias made landfall on October 9th at 730 PM near Destin, FL as a strong category 2 storm with max sustained winds of 105 MPH and a central pressure of 971 mb. The storm quickly weakened as it moved inland along the northern Gulf coast. As a decaying Isaias moved north, the wind field gradually expanded across the southeast. Gusty conditions were felt across Central Alabama with gusts generally ranging from 30-40 knots. This system brought beneficial rains to the region as much of the state was experiencing Abnormally Dry to Extreme Drought conditions. High rainrates led to a quick 3-4" of rain in a few spots across southeast Central Alabama. However, no espidoes of flash flood were observed. Isaias quickly transitioned into an extra-tropical storm which allowed for all Tropical Storm Warnings to be downgraded to Wind Advisories by 4 AM Saturday.

NOTE: It is unlikely that the point-based observations provided in this report sampled the peak values for the event.
