Trees were blown down.

Ahead of a cold front associated with a strong upper level storm system, a squall line moved across Central Alabama on Monday, April 11. This line of thunderstorms produced widespread wind damage, knocked down numerous trees and power lines and damaged many homes and buildings. In addition, embedded areas of rotation along the line produced one tornado, an EF1 in Jefferson County.

A tornado touched down in Sumter County along Dan Mitchell Road, south of State Route 116, six miles west southwest of Gainesville. As the tornado moved east, the tornado strengthened to an EF-2 rating, with maximum sustained winds of 115 mph. Dozens of hardwood trees were either snapped or uprooted and several homes sustained damage. One home sustained major roof damage along the path. The tornado lifted a half a mile west of State Route 39, one mile south of Gainesville.

GREENE COUNTY --- 2.5 ENE KNOXVILLE [33.01, -87.74], 3.3 ENE KNOXVILLE [33.02, -87.73]

04/15/11 14:14 CST 83.80K Tornado (EF1, L: 0.85 mi , W: 100 yd)

04/15/11 14:16 CST 0 Source: NWS Storm Survey

The first segment in this tornado track initially touched down north of County Road 86 in Greene County. It then moved northeast into Tuscaloosa, where it eventually lifted. In Greene County, the tornado was rated an EF-1, with maximum winds of 90 mph. Dozens of hardwood and softwood trees were either snapped or uprooted.

TUSCALOOSA COUNTY --- 3.7 SE RALPH [33.01, -87.73], 1.6 WSW BOX SPGS [33.19, -87.50]

04/15/11 14:16 CST 7.06M Tornado (EF3, L: 17.52 mi , W: 500 yd)

04/15/11 14:45 CST 0 Source: NWS Storm Survey

The second segment of this tornado crossed into Tuscaloosa County, approximately one half mile west of Lock 9 Road. The tornado touched down in Greene County, 3 miles southeast of Ralph. The tornado strengthened to an EF-3 rating, with maximum winds of 140 mph. Hundreds of trees were snapped or uprooted and a power transmission tower was severely damaged. As the tornado moved northeast into Taylorville, several homes and businesses received structural damage. The tornado lifted near Mayfair Drive, south of Veterans Memorial Parkway. The damage path in Tuscaloosa County had a maximum width of 500 yards.

HALE COUNTY --- 3.4 NW GREENSBORO [32.73, -87.63], 4.2 NNW GREENSBORO [32.76, -87.61]

04/15/11 14:33 CST 0.37M Tornado (EF2, L: 2.20 mi , W: 700 yd)

04/15/11 14:37 CST 0 Source: NWS Storm Survey

A tornado touched down near State Highway 14 in Hale County. As it moved northeast, several hundred trees were snapped or uprooted. Several homes and businesses sustained moderate roof damage and a church sustained significant damage to the windows and one wall. Although no injuries were reported, one person remained trapped in their overturned mobile home for several hours. The tornado lifted near State Highway 69.

SUMTER COUNTY --- 3.0 E CUBA [32.44, -88.33], 3.3 W LILITA [32.48, -88.19]

04/15/11 14:53 CST 3.91M Tornado (EF2, L: 8.92 mi , W: 200 yd)

04/15/11 15:07 CST 0 Source: NWS Storm Survey

A tornado touched down in Sumter County, near US Highway 80, where several trees were snapped. The tornado strengthened to an EF-2 rating, with maximum wind speeds of 115 mph and continued to move northeast as it crossed Alabama Highway 17, where two homes sustained significant damage, and two outbuildings were completely destroyed. The tornado lifted near County Road 17, about 7 miles south of Livingston.

BIBB COUNTY --- 1.1 ENE MERTZ [32.90, -87.36], 1.5 ESE BLOCTON [33.11, -87.08]

04/15/11 15:00 CST 88.75K Tornado (EF1, L: 21.77 mi , W: 1760 yd)

04/15/11 15:34 CST 0 Source: NWS Storm Survey

A tornado touched down in Bibb County, along State Highway 25. The tornado has been rated an EF-1, with maximum winds at 105 mph. As the tornado moved northeast, it crossed Highway 5 south of West Blocton where several homes sustained moderate roof damage. Along the path, hundreds of trees were either snapped or uprooted. The tornado lifted along County Road 24, 3 miles east of West Blocton.

This tornado developed along a Quasi-l inear Conv	ective System in southeast Tus	scaloosa County	near Coaling and r	moved northeastward for

approximately 18 miles. It crossed into Jefferson County between Interstate 20 and Bucksville, then continued for nearly 2 miles into Jefferson County. The tornado touched down in the southwestern extent of Coaling, north of CR 14, along Staghorne Dr where it damaged many trees. The tornado quickly strengthened as it moved through Coaling to an EF3 rating with winds of 155 mph, remaining south of US Hwy 11. At least a dozen homes sustained damage. Several homes were completely destroyed. The tornado weakened as it moved east of Coaling and crossed US Hwy 11. The tornado moved across the Mercedes Plant where it caused minor roof damage to one building, knocked down several light poles along Interstate 20 near the plant, and snapped numerous trees. This damage was consistent with an EF1 rating and winds of 100 mph. The tornado continued to cause tree damage as it moved northeast and approached the Jefferson County line.

A tornado developed along a Quasi-Linear Convective System and touched down in rural southwestern Walker County, near the Fairview community. The tornado moved north northeast through Cordova before lifting near Lynns Park. The tornado touched down southwest of CR 6 and rapidly intensified to an EF3 rating with winds of 140 mph. Along Horseshoe Bend, a home was completely leveled, where it swept the foundation clean of the structure and debris. The tornado continued north northeast through the Richardson subdivision and across Pleasantville Road. It destroyed at least two single-wide manufactured homes. The tornado crossed US Hwy 269 where it weakened to an EF2 with winds of 120 mph and moved through the Aldridge community, where several homes were damaged, large trees were uprooted, and another single-wide manufactured home was tossed and obliterated. In Cordova, the tornado caused significant roof and parapet damage to brick buildings in the downtown area. The tornado crossed Old US Hwy 78 just east of the Mulberry Fork, where it snapped and uprooted trees and caused minor structural damage. The tornado continued northeast and dissipated south of County Road 22, less than a mile north of Old US Hwy 78. A second tornado, with winds of 140 mph, tracked through Cordova during the afternoon of the same day (between 1535 and 1605 CST) and caused more significant structural damage.

This tornado developed along a Quasi-Linear Convective System in southeast Tuscaloosa County, near Coaling and moved northeastward for approximately 18 miles. It crossed into Jefferson County between Interstate 20 and Bucksville and continued for nearly 2 miles into Jefferson County. The tornado weakened as it entered Jefferson County near Tingle Springs Circle to an EF0 and its path width gradually became less until the tornado lifted near the intersection of Old Tuscaloosa Highway and Lowetown Rd. Along its path in Jefferson County, the tornado caused tree damage.

A tornado developed along a Quasi-Linear Convective System. It touched down in far northern Jefferson County, northeast of Warrior, and tracked northeastward into Blount County and across the western bank of Mountain Woods Lake before it lifted northeast of Sagefield Rd. The damage along the Jefferson County portion of the track was consistent with an EF1 rating with winds of 95 mph. The tornado touched down east of Old Hayden Rd, and tracked northeast where it downed dozens of trees along Mabel Dr. This resulted in damage to several homes. The tornado moved into Blount County near Sibleyville Rd.

A tornado developed along a Quasi-Linear Convective System. It initially touched down in far northern Jefferson County, northeast of Warrior, and tracked northeastward into Blount County and across the western bank of Mountain Woods Lake before it lifted northeast of Sagefield Rd. As the tornado moved into Blount County near Sibleyville Rd, it intensified to an EF2 rating with winds of 135 mph. An outbuilding was destroyed and many trees downed near the county line. The tornado continued northeast, before making a slight eastward turn and moving along the western edge of Mountain Woods Lake. Along the lake, twenty to twenty-five homes were damaged with at least 3 homes destroyed. Three injuries occurred while a family was sheltered in their home, which was destroyed. In addition, multiple boat docks and garages were damaged or destroyed. Along the portion of the path in Blount County, hundreds of trees were snapped or uprooted.

A tornado developed along a Quasi-Linear Convective System. It touched down in south central Jefferson County where it affected the Cahaba Heights and Liberty Park communities of the Birmingham Metro area. The tornado touched down near Gresham Elementary School. It knocked down several trees along Country Ridge Pl. The tornado moved northeast and crossed US Hwy 280, near Dolly Ridge Rd where it knocked down numerous trees and damaging buildings along the highway. The tornado strengthened as it moved into Cahaba Heights where it produced damage consistent with an EF2 rating and winds of 120 mph. The most significant area of damage occurred between US Hwy 280 and Cahaba Heights Rd, near Cahaba Heights Elementary School, where numerous homes sustained significant damage from fallen trees. The tornado weakened to an EF1 rating with winds of 100 mph as it continued northeast, but still knocked down trees which resulted in damage to homes and businesses. The tornado crossed Interstate 459 south of Liberty Park knocking down dozens of trees, and continued northeast causing minor tree damage. The tornado lifted near Grants Mill Rd, 2 miles south of Interstate 459. A person was killed (indirect) during clean-up efforts.

tornado while in Marion County was 0.5 mile (880 yds). The tornado touched down west of AL Hwy 19 near Sipsey Creek and moved northeast and crossed Corridor X/Future Interstate 22. Here it caused significant tree damage. The tornado strengthened north of Hamilton and caused roof damage to at least one home. The storm strengthened further as it approached US Hwy 43, southwest of Hackleburg, to a violent EF4 rating with winds estimated at 170 mph. The tornado tracked parallel to US Hwy 43 toward Hackleburg and strengthened more to an EF5 with winds up to 210 mph, as its path widened to 0.75 mile (1320 yds). Several subdivisions and businesses, Hackleburg High School, Middle School, and Elementary School, and the Wrangler Plant were destroyed. Vehicles were tossed up to 200 yards. One well built home with 4 brick sides was completely leveled and the debris from the home was tossed over 40 yards to the north. The tornado moved northeast of Hackleburg and continued to parallel US Hwy 43. It crossed into Franklin County just east of the highway. Along the damage path in Marion County, thousands of trees were downed, several hundred structures were damaged, and at least 100 of these structures were completely destroyed as many homes were leveled. Eighteen fatalities are attributed to this tornado in Marion County, as well as numerous injuries.

The first segment of this long track tornado initially touched down 5 miles northeast of Pickensville near Basinger Rd, north of AL Hwy 86. This tornado continued through portions of Tuscaloosa, Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before it dissipated in Marshall (See Storm Data for Huntsville) County. While the average path width of this tornado in Pickens County was around 0.4 mile (704 yds), the maximum path width was 0.6 mile (1056 yds). The tornado crossed AL Hwy 17 and US Hwy 82, across the southern and western extents of the city of Reform. The storm strengthened to an EF1 rating with winds of 110 mph to the northeast of Reform. Along CR 49, several chicken houses were destroyed and grain feed bins were tossed up to 100 yards. As the tornado crossed AL Hwy 159, north of CR 49, several homes sustained roof damage and several outbuildings were destroyed. Numerous trees were snapped or uprooted along the path. The tornado moved northeast entering Tuscaloosa County south of Mid Walters Rd.

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

A long track violent tornado touched down in Monroe County (See Storm Data Memphis) Mississippi, southwest of Smithville where it caused damage associated with an EF5 rating. The tornado moved northeast through Itawamba County before it crossed into Marion County, Alabama at a point near CR 93, southwest of Bexar. The tornado weakened to an EF1 rating as it entered Alabama, with winds of 110 mph . As the tornado tracked south of Bexar, a few mobile homes and outbuildings were damaged and numerous trees were snapped off and uprooted. The tornado moved across Corridor X/Future Interstate 22, near CR 33. As the tornado approached AL Hwy 19, 4 miles east southeast of Shottsville, it strengthened to an EF3 rating with winds of 160 mph, and destroyed several homes. This resulted in 6 fatalities. The tornado continued northeastward where it destroyed several single family homes and mobile homes along CR 20 and AL Hwy 187, 9 miles north of Hamilton. As the tornado approached the Marion/Franklin County line, several more houses were damaged and at least one chicken house destroyed near AL Hwy 187. Along the Alabama portion of the tornado path, hundreds of trees were downed, and at least 25 homes, mobile homes, and outbuildings were damaged or destroyed. The average path width of the Alabama portion of the tornado path was 0.5 mile (880 yds). The tornado continued into Franklin County Alabama (See Storm Data Huntsville), dissipating near Old Line Rd.

A tornado initially touched down in Kemper County Mississippi (See Storm Data Jackson), near Scooba, and tracked northeast through Sumter County, Alabama and into southern Pickens County just west of CR 85. As the tornado strengthened to an EF3 rating with winds of 140, the path width decreased to 0.4 mile (704 yds). As the tornado crossed CR 85, a large cinder block building sustained significant loss of roofing and partial wall collapse. The tornado continued to cause tree damage along its path as it moved northeast and crossed the Tombigbee River at Vienna. The tornado weakened and lifted at AL Hwy 14, just north of the Sipsey River.

TUSCALOOSA COUNTY --- 3.4 W MOORES BRIDGE [33.46, -87.84], 3.8 SSW NEW LEXINGTON [33.52, -87.70]

The second segment of this long track tornado crossed into Tuscaloosa County south of Pleasant Ridge Church Rd. This tornado began in Pickens County, 5 miles northeast of Pickensville, and tracked northeastward into Tuscaloosa County. It continued through portions of Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before it dissipated in Marshall (See Storm Data for Huntsville) County. While the average path width of this tornado in this portion of Tuscaloosa County was around 0.5 mile (880 yds), the maximum path width maximum was 0.8 mile (1408 yds), which occurred along AL Hwy 171. The tornado strengthened as it entered west Tuscaloosa County to an EF3 rating with winds of 140 mph. It produced significant tree damage along AL Hwy 171. Trees were debarked with only bare large limbs left. Other trees at this location were snapped. The tornado moved northeast weakening to an EF0 rating, but continued to produce tree damage across northwest Tuscaloosa County. The tornado moved into southeast Fayette county 0.5 mile east of Fayette Rd.

FAYETTE COUNTY --- 5.8 E NEWTONVILLE [33.52, -87.70], 7.7 E NEWTONVILLE [33.53, -87.67]

04/27/11 15:18 CST 0 Source: NWS Storm Survey

The third segment of this long track tornado crossed into southeastern Fayette County southeast of Concord and quickly crossed New Hope Rd before it moved into Tuscaloosa County at CR 12, south of New Lexington. This tornado began in Pickens County, 5 miles northeast of Pickensville, and tracked through Tuscaloosa, Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before it dissipated in Marshall (See Storm Data for Huntsville) County. Both the average and maximum path width of this tornado in this portion of Fayette County was around 0.3 mile (528 yds). The tornado strengthened slightly to an EF1 rating, with winds of 100 mph, as it entered this area of Fayette County. Many trees were snapped or uprooted, along with significant branch damage, occurred along this portion of the path, particularly along and near Old Country Rd.

TUSCALOOSA COUNTY --- 2.5 S NEW LEXINGTON [33.53, -87.67], 5.5 NE STERLING [33.60, -87.51]

The fourth segment of this long track tornado entered Tuscaloosa County for the second time at CR 12, south of New Lexington. This tornado began in Pickens County, 5 miles northeast of Pickensville, and tracked through Tuscaloosa, Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before it dissipated in Marshall (See Storm Data for Huntsville) County. While the average path width of this tornado in this portion of Tuscaloosa County was around 0.5 mile (880 yds), the maximum path width was 0.75 mile (1320 yds). As the tornado crossed into Tuscaloosa County, minor tree damage of EF1 rating was noted. As the tornado crossed US Hwy 43, a mobile home was completely destroyed and the debris from the building was blown away. Northeast of US Hwy 43, a single family brick home suffered major roof loss as the tornado strengthened briefly to an EF2 rating, with winds of 120 mph. As the tornado continued northeastward across north Tuscaloosa County, minor tree damage occurred and at least 3 other homes sustained minor roof damage. The storm moved into southeastern Fayette County at Old Cheatam Rd, northwest of Sandtown.

Injuries Crop Dmg

The fifth segment of this long track tornado entered Fayette County for the second time at CR 83, south of Boley Springs, and moved northeast where it exited Fayette County south of Blue Water Trace Rd . This tornado began in Pickens County, 5 miles northeast of Pickensville, and tracked through Tuscaloosa, Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before it dissipated in Marshall (See Storm Data for Huntsville) County. While the average path width of this tornado in this portion of Fayette County was around 0.5 mile (880 yds), the tornado maximum path width was 0.75 mile (1320 yds) as it entered the county. The tornado strengthened to an EF3 rating, with winds of 140 mph, as it crossed CR 83 in Fayette County, where a mobile home was completely destroyed, with the remaining debris thrown a considerable distance, which resulted in 2 fatalities. The tornado continued northeast, where it crossed Wilcutt Road and CR 46, where several additional mobile homes were completely destroyed and the debris thrown a considerable distance. This resulted in two additional fatalities. Along this path, two homes sustained complete roof loss or partial roof loss, respectively. In addition, several cars were thrown and destroyed, and a building sustained extensive damage to the exterior brick veneer. The tornado caused considerable damage to trees, completely debarked trees with only stubs of largest branches as it continued northeast toward the Walker County line.

Direct Fatalities: M76MH, F69MH, M60PH, F60PH

WALKER COUNTY --- 4.0 SSW MARIETTA [33.64, -87.42], 4.5 NE DILWORTH [33.87, -87.00]

04/27/11 15:35 CST 9 0.12B Tornado (EF4, L: 29.02 mi , W: 1056 yd)

The sixth segment of this long track tornado entered southwest Walker County south of Blue Water Rd and moved northeast, where it eventually exited the northeast portion of the county east of Phillipstown Rd. This tornado began in Pickens County, 5 miles northeast of Pickensville, and tracked through Tuscaloosa, Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before it dissipated in Marshall (See Storm Data for Huntsville) County. While the average path width of this tornado in Walker County was around 0.3 miles (528 yds), the tornado widened as it approached the city of Cordova to a path width maximum of 0.6 mile (1056 yds). Shortly after it entered the county, the tornado knocked down a cell phone tower, caused minor roof damage to a mobile home and single family home, and completely destroyed a mobile home as it approached AL Hwy 69. As the storm continued northeast crossing Earnest Chapel Rd southeast of Oakman, several vehicles were rolled and a home was destroyed. This resulted in 1 fatality and 2 injuries. The tornado continued east northeast where it crossed CR 35 and AL Hwy 269 south of Parrish. The tornado weakened to an EF0 as it approached Corridor X/future Interstate 22, with only minor tree damage noted, before it strengthened significantly as it neared Cordova. A 0.6 mile wide swath of EF3 damage, with winds of 140 mph, was noted in downtown Cordova. Numerous homes and buildings sustained significant damage, if not complete destruction, resulting in 4 fatalities. The tornado continued northeastward across Burton Chapel Loop Road and crossed the Mulberry Fork of the Black Warrior River. As it crossed Mountain View Road, the tornado increased to a violent EF4 rating, with winds of 170 mph, and destroyed 2 mobile homes, as well as a single family home. One of the mobile home undercarriages was missing, having been tossed at least 500 yards. At this site, a small bulldozer was flipped over, a pickup truck was tossed 200 yards, and an International 4700 dump truck was tossed 50 yards and was destroyed upon landing. A 2 ton utility trailer from this location was found a mile away, with a 2.5 ft impact crater where it landed. As the tornado neared Old Hwy 78, it tossed two double wide mobile homes at least 100 yards, resulting in their complete destruction. Two fatalities occurred here. The tornado continued toward Sipsey, where an unanchored double wide mobile home was tossed 100 feet up a 50 foot embankment. Two fatalities occurred in this area. The tornado continued at a minimum of EF2 strength to the northeast where it destroyed several homes and tossed a double wide mobile home 100 ft, south of Campbellville. Along this path, significant tree damage was noted, as well as damage to or the complete destruction of numerous other single family homes

This was the second tornado to hit downtown Cordova on this day. At 418AM-436AM CST, a tornado with winds of 120 mph moved through the same area causing significant structural damage.

Direct Fatalities: M47MH, F43MH, M45MH, F89MH, F64PH, M10PH, M12PH, F46PH, M24PH

GREENE COUNTY --- 1.4 SSW MANTUA [33.03, -87.94], 3.5 NE SNODDY [33.06, -87.83]

04/27/11 15:48 CST 0 Source: NWS Storm Survey

A tornado touched down in northern Greene County and moved northeast through southern Tuscaloosa and western Jefferson Counties, causing devastating damage consistent with a violent EF4 rating to portions of the city of Tuscaloosa and western suburbs of Birmingham, before it lifted northeast of downtown Birmingham. The tornado initially touched down just south of the intersection of CR 60 and CR 208 in Greene County, and moved northeast, crossing mostly rural areas and causing significant tree damage. One outbuilding was destroyed with the debris being swept away and pieces of farm equipment flipped over. This damage was consistent with an EF2 rating with winds of 125 mph. The tornado crossed into Tuscaloosa County just north of CR 60. This tornado was produced by a supercell thunderstorm that began in Newton County Mississippi at 13:54 pm CST, finally dissipating in Macon County, North Carolina at approximately 21:18 pm CST. This supercell spawned several strong to violent tornadoes along its long path.

This tornado initially touched down in rural northern Greene County and moved northeast through southern Tuscaloosa and western Jefferson Counties, causing devastating damage consistent with a violent EF4 rating to portions of the city of Tuscaloosa and western suburbs of Birmingham, before it lifted northeast of downtown Birmingham. The tornado entered Tuscaloosa County just north of CR 60, west northwest of Ralph, and moved northeast causing tree damage and minor structural damage consistent with an EF2 rating and winds of 125 mph. The tornado strengthened as it crossed the Black Warrior River, north of Interstate 20 and approached Tuscaloosa. As the tornado approached Interstate 359, several buildings were destroyed including the Tuscaloosa County Emergency Operations Center. The tornado strengthened further to a violent EF4 with winds of 190 mph. Along 15th St E. and McFarland Blvd E., several small restaurants and stores were destroyed, with only a wall or two still standing. The tornado devastated the Cedar Crest neighborhood just north of 15th St, leveling many cinder block homes and causing at least 3 fatalities. The tornado crossed McFarland Blvd, destroying additional stores and restaurants. The tornado crossed University Blvd in the Alberta City community. Alberta Elementary School suffered nearly complete destruction, with only a few portions of walls still standing. A nearby two story apartment building was reduced to rubble sitting on the foundation. The Alberta Park Shopping Center was completely destroyed with no walls standing and a pile of debris on the foundation. Cinder block construction homes in the surrounding neighborhood were completely destroyed, and in a few cases debris was swept away from the site. The tornado continued northeast and struck the Chastain Manor Apartments at the north end of 34th Ave E. Buildings on the east side of this new 2 story apartment complex were completely destroyed, with only a pile of debris remaining and a few walls set into the hillside. A small club house that was anchored to a foundation, but with apparently no interior walls, was completely destroyed and swept from its foundation. Similar devastation to homes and businesses was noted along both sides of CR 45 near 1st St E. and locations to the northeastward. East of Holt, the tornado path width widened from 0.5 mile to around 1 mile. The tornado crossed Holt Peterson Rd just northwest of Clinker Rd, where two homes were completely destroyed. One home on a foundation was swept clean, with only floor joists remaining attached to the foundation. Almost all trees were blown down or snapped in the vicinity, as well as in the bottom of a narrow ravine nearly 100 feet below the house. The tornado continued to Holt Lock and Dam Road near its intersection with Recreation Area Road. Numerous mobile homes and several cinder block homes were destroyed in this area, which resulted in several fatalities. The tornado struck a marina on Holt Lake at the end of Recreation Area Road where it caused significant damage to a restaurant as well as numerous boats. Several injuries were noted in this area. The tornado continued northeastward and weakened to an EF3 rating with winds of 130 mph. As its path narrowed to 0.5 mile, the tornado passed north of Brookwood, near the intersection of Hannah Creek Rd and CR 59. Several mobile homes were destroyed, cinder block homes received heavy damage, and significant tree damage was noted in this area. The tornado moved parallel to Hannah Creek Rd where it caused extensive tree damage and destroyed at least one mobile home. The tornado crossed CR 99 and moved into western Jefferson County, 4 miles north of Abernant. A person died (indirect) several weeks after the event as a result of contracting pneumonia from exposure to the elements after his home was destroyed. An additional 6 people died (indirect) in the months following the tornado from the stress of the event, not direct injury.

This tornado was produced by a supercell thunderstorm that began in Newton County Mississippi at 13:54 pm CST, finally dissipating in Macon County, North Carolina at approximately 21:18 pm CST. This supercell spawned several strong to violent tornadoes along its long path.

A tornado initially touched down in southwest Marion County, near the community of Pikeville and tracked northeast. The tornado moved across southern portions of Haleyville and into Winston County, south of AL Route 129. The tornado lifted in the William B. Bankhead National Forest, north of Rabbittown. The tornado touched down along US Hwy 43, south of CR 2 where it downed hundreds of trees. The tornado moved northeast and crossed Corridor X/Future Interstate 22 east of CR 37. Here it caused tree damage consistent with an EF1 tornado and winds of 105 mph. The tornado strengthened north of Pea Ridge to an EF3 rating with winds of 150 mph. Along CR 45, west of AL Route 253, at least two mobile homes were completely destroyed and six well built homes sustained major damage or were completely destroyed. As the tornado approached US Hwy 278 near Whitehouse, several outbuildings were destroyed and a well built home was destroyed with the foundation swept clean. Several injuries were noted in this area. The tornado continued northeastward and caused mostly tree damage as it neared the Winston County line.

The eighth segment of this long track tornado entered southwestern Blount County just north of Albright Rd from southern Cullman County (See Storm Data for Huntsville). This tornado began in Pickens County, 5 miles northeast of Pickensville, and tracked through Tuscaloosa, Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before dissipating in Marshall (See Storm Data for Huntsville) County. While the average path width of this tornado in this portion of Blount County was around 0.4 mile (704 yds), the tornado maximum path width was 0.5 mile (880 yds). As the storm moved northeast, it caused significant roof damage to a single family home on Acton Bend Circle consistent with an EF2 rating and winds of 115 mph. Along this portion of the track, the tornado also knocked down hundreds of trees. The tornado crossed Interstate 65 north of Sulphur Springs, before it crossed the Mulberry Fork of the Black Warrior River, briefly moving into Cullman County.

The fourteenth segment of this long track tornado crossed back over the Mulberry Fork of the Black Warrior River from eastern Cullman County (See Storm Data for Huntsville) into western Blount County southwest of Bangor. This tornado began in Pickens County, 5 miles northeast of Pickensville, and tracked through Tuscaloosa, Fayette, Walker, Cullman (See Storm Data for Huntsville), and Blount Counties, before dissipating in Marshall (See Storm Data for Huntsville) County. As the tornado moved northeast, the path width gradually increased from 0.25 mi (440 yds) to a maximum of 0.70 mi (1232 yds) in Blountsville. The tornado continued its path of significant tree damage as it crossed US Hwy 31 and moved northeast toward Blountsville, strengthening to an EF2 rating, with winds of 130 mph. As the tornado crossed US Hwy 431, multiple well built brick and slab foundation homes were damaged on Maple Drive, one of which had only interior walls left standing. Several other outbuildings were also destroyed. As the storm continued to the northeast of Blountsville, it strengthened further to an EF3 rating, with winds of 145 mph. A home near Osborne Lake, south of Blue Springs, was left with only interior walls standing. The tornado continued northeast and damaged hundreds of trees. Just northeast of US Hwy 278, a single family home was destroyed and a dump truck was thrown at least 30 ft. The tornado continued to cause significant tree damage as it neared the Marshall County line east of Nesmith Rd and south of CR 25, in northern Blount County.

GREENE COUNTY --- 3.3 WSW TISHABEE [32.62, -88.05], 6.2 SSE MC CLURE [32.74, -87.80]

This tornado initially touched down in rural northern Greene County and moved northeast through southern Tuscaloosa and western Jefferson Counties. The tornado caused devastating damage consistent with a violent EF4 rating to portions of the city of Tuscaloosa and western suburbs of Birmingham and then lifted northeast of downtown Birmingham. The tornado entered western Jefferson County 5.5 miles west of North Johns. The tornado continued to cause significant tree damage as it crossed Sealy Ann Mountain Rd and CR 23. As the tornado crossed Valley Creek and the far northern portion of Virginia, several homes sustained minor damage. The tornado strengthened to a violent EF4 rating with winds of 190 mph as it approached Concord. Several retail stores were destroyed along CR 46 and only piles of debris were left on their foundations. Several cinder block homes were completely destroyed with debris swept away. In addition, numerous other homes in the area were destroyed with only a few interior walls left standing. At least five fatalities occurred in Concord. The violent tornado continued northeastward toward Pleasant Grove, where extensive damage occurred across western and northern parts of town. Numerous homes were destroyed and foundations swept clean of debris. Several vehicles were picked up and tossed 15 yds. At least 11 fatalities occurred in Pleasant Grove. The tornado quickly moved into McDonald Chapel, near the intersection of CR 80 and Vicksburg St, killing one person. The tornado weakened to an EF2 with winds of 125 mph, but still damaged many homes and destroyed several others. The tornado moved through the Smithfield Estates area where it caused significant damage along Cherry Ave between Daniel Payne Dr and US Hwy 78 and resulted in one fatality. Numerous homes and a 2-story apartment complex sustained significant damage, consistent with an EF2 rating. As the tornado moved northeast, it crossed Interstate 65 near mile marker 266 and into the city of Fultondale. The path width increased to around 1.5 miles. Hundreds of trees were downed along the interstate and several light poles were folded over. Several buildings along US Hwy 31 sustained significant roof and structural damage. The tornado continued northeast where it crossed CR 124, and lifted just west of AL Hwy 79, 4 miles north of Tarrant.

This tornado was produced by a supercell thunderstorm that began in Newton county Mississippi at 13:54 pm CST, finally dissipating in Macon county, North Carolina at approximately 21:18 pm CST. This supercell spawned several strong to violent tornadoes along its long path, including another violent EF4 tornado that crossed portions of east Central Alabama.

This tornado initially touched down in eastern Jefferson County, north northeast of Trussville and moved northeast through portions of St. Clair, Calhoun, Etowah and Cherokee Counties, before it moved into Georgia, across Polk, Floyd and Bartow (See Storm Data Peachtree City) Counties. The tornado crossed Neely Henry Lake and into Calhoun County at Eagle Cove Rd., northwest of Ohatchee. At this point, the tornado had winds of 180 mph, an EF4 rating, and a path width of 1 mile. As the tornado crossed AL Hwy 77, numerous homes were leveled and mobile homes were demolished. Trees were left as stumps. Four fatalities occurred in this area. The tornado continued to cause extensive damage as it moved northeast crossing US Hwy 431 at Colwell and CR 23, where several homes and one church were destroyed. Four fatalities occurred in this area. As the tornado approached the Etowah County line, it weakened to an EF2 with winds of 120 mph, but continued to cause damage. Several homes were damaged and one mobile home destroyed along CR 64. The tornado moved into Etowah County east of Cannonball Rd.

This tornado was produced by a supercell thunderstorm that began in Newton County Mississippi at 13:54 pm CST, and dissipated in Macon County, North Carolina at approximately 21:18 pm CST. This supercell spawned several strong to violent tornadoes along its long path, which included another violent EF4 tornado that crossed portions of Tuscaloosa and western suburbs of the Birmingham.

This tornado initially touched down in eastern Jefferson County, north northeast of Trussville and moved northeast through portions of St. Clair, Calhoun, Etowah and Cherokee Counties. The tornado then moved into Georgia, across Polk, Floyd and Bartow (See Storm Data Peachtree City) Counties. The tornado moved into southwestern Cherokee County south of Estes Crossroads, along CR 19. As the tornado continued northeast, it strengthened as it moved south of Gnatville, to an EF2 rating with winds of 120 mph. Extensive tree damage was noted along CR 6 and several mobile homes sustained significant damage off of CR 447. The tornado strengthened further to an EF3 rating with winds of 150 mph as it crossed AL Hwy 9 south of Coloma. A single family home was destroyed on CR 31. The tornado weakened slightly as it crossed Frog Mountain, but continued to knock down trees and damage an outbuilding. The tornado re-strengthened as it crossed CR 45 north of Rock Run. Damage along CR 29 south of Forney was consistent with an EF3 rating and winds of 160 mph. Several well built homes were completely destroyed. The tornado weakened as it moved toward the Alabama/Georgia stateline, but continued to cause significant tree damage consistent with an EF1 rating and winds of 105 mph. The tornado crossed into Polk County Georgia at CR 28, south of Hanson.

This tornado was produced by a supercell thunderstorm that began in Newton County Mississippi at 13:54 pm CST, and eventually dissipated in Macon County, North Carolina at approximately 21:18 pm CST. This supercell spawned several strong to violent tornadoes along its long path, which included another violent EF4 tornado that crossed portions of Tuscaloosa and western suburbs of the Birmingham.

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

A tornado touched down in central Elmore County and moved northeast through central Tallapoosa and western Chambers Counties, before it lifted north northwest of Lafayette. The tornado touched down north of Wetumpka, along CR 209 where a few trees were downed and minor home damage were noted. The tornado quickly intensified as it moved northeast through Dexter, where it caused major damage to several homes, outbuildings and farm equipment that was consistent with winds of 130 mph, an EF2. It continued across AL Hwy 9 and damaged several homes. The tornado intensified south of Central to EF3 strength, where it destroyed a mobile home and damaged several single family homes near CR 418. It moved through a mobile home park at the intersection of Middle Road and Auction Barn Road, where it completely destroyed 10 mobile homes and killed 4 people. The tornado continued east to the Mount Hebron Road area. Here, the tornado destroyed several homes, businesses, 2 churches, and an agricultural nursery. The tornado then crossed Lake Martin, just south of the AL Hwy 63 Bridge, doing significant damage to numerous homes around the Windermere area, as its path widened to 0.5 mile. The tornado crossed into Tallapoosa County near Stoney Ridge Rd.

Direct Fatalities: F23MH, F5MH, F43MH, F67MH, F74PH, F70PH

SHELBY COUNTY --- 2.3 SSE VINCENT [33.35, -86.40], 0.6 ENE ARKWRIGHT [33.38, -86.37]

04/27/11 19:15 CST 44K Tornado (EF1, L: 2.80 mi , W: 200 yd)

04/27/11 19:18 CST 0 Source: NWS Storm Survey

A tornado initially touched down in far eastern Shelby County and tracked north northeast into western Talladega County. The tornado lifted northeast of Logan Martin Dam. The tornado touched down south of the town of Vincent on County Road 62 where it uprooted dozens of trees. The tornado traveled to the northeast and knocked down additional trees along its path. The damage was consistent with an EF1 rating and winds of 105 mph.

The tornado crossed the Coosa River and moved into Talladega County, east of Bates Rd.

TALLADEGA COUNTY --- 2.3 W COOSA PINES [33.38, -86.37], 2.6 NW ST IVES [33.45, -86.31]

04/27/11 19:18 CST 1M Tornado (EF1, L: 5.79 mi , W: 200 yd)

04/27/11 19:24 CST 0 Source: NWS Storm Survey

A tornado initially touched down in far eastern Shelby County, south of Vincent, and tracked north northeast into western Talladega County. The tornado crossed the Coosa River, west of Laniers. The tornado moved northeast and caused tree damage on the east side of Logan Martin Dam and through residential neighborhoods along the southeastern edge of Logan Martin Lake. Several homes were damaged due to fallen trees. Damage was consistent with an EF1 rating and winds of 105 mph. The tornado lifted near the lake edge, along Lakeview Circle.

PERRY COUNTY --- 1.5 N UNIONTOWN [32.47, -87.52], 2.7 NNE UNIONTOWN [32.48, -87.49]

04/27/11 19:31 CST 0.65M Tornado (EF2, L: 1.92 mi , W: 350 yd)

04/27/11 19:35 CST 0 Source: NWS Storm Survey

A tornado touched down in Smith County, Mississippi and tracked through Jasper and Clarke Counties (See Storm Data Jackson), where it caused EF4 rated damage. The tornado then crossed into Choctaw County (See Storm Data Mobile) Alabama, where it caused EF3 rated damage. The tornado tracked across portions of Sumter, Marengo and western Perry Counties, before it dissipated. The tornado crossed into Perry County north of Uniontown and produced significant tree damage. The tornado crossed AL Hwy 183, where it damaged two outbuildings and destroyed a grain silo. The tornado lifted east of AL Hwy 183, northeast of Uniontown.

TALLAPOOSA COUNTY --- 6.1 NW BARNESVILLE [32.75, -85.88], 2.5 S DUDLEYVILLE [32.88, -85.59]

04/27/11 19:36 CST 1 0.12B Tornado (EF4, L: 19.03 mi , W: 880 yd)

04/27/11 20:01 CST 10 0 Source: NWS Storm Survey

A tornado touched down in central Elmore County, north of Wetumpka, and moved northeast through central Tallapoosa and western Chambers Counties, before it lifted west northwest of Lafayette. The tornado crossed into Tallapoosa County near Stoney Ridge Rd, south of CR 34, and intensified to EF4 strength with winds of 170 mph. Damage was widespread and severe with several well built multi-story homes destroyed with no walls remaining on floors above basement level. The tornado continued at this strength but became narrower to nearly 400 yards wide as it crossed AL Hwy 49 south of Dadeville where it destroyed 2 homes and rolled a pick-up truck 120 yards. The tornado continued northeast and weakened to EF3 strength with winds of 155 mph. It crossed U.S. Hwy 280 just east of Dadeville where it produced significant damage to several homes and businesses, and caused one fatality. The tornado crossed into Chambers County west of Lafayette, south of CR 48.

Direct Fatalities: F70PH

PERRY COUNTY --- 0.4 ENE MARION PERRY CO ARPT [32.55, -87.31], 2.2 NE VILULA [32.57, -87.25]

04/27/11 19:50 CST 1.30M Tornado (EF1, L: 4.24 mi , W: 100 yd)

04/27/11 19:53 CST 0 Source: NWS Storm Survey

A tornado touched down 5.5 miles south of Marion, 1 mile west of CR 35 and tracked northeastward. The tornado destroyed an outbuilding and damaged the roof of a single family home along CR 38. The tornado strengthened to EF1 with winds of 90 mph as it crossed CR 45, north of Vilula. Many trees were knocked down near the Faith Chapel Baptist Church. The tornado damaged a couple barns along Kynard Rd and quickly dissipated just east of CR 4.

CHAMBERS COUNTY --- 3.5 NW JUDSON [32.88, -85.59], 1.4 NNE SIKES [32.92, -85.52]

A tornado touched down in central Elmore County, north of Wetumpka, and moved northeast through central Tallapoosa County and crossed into western Chambers County, west of Sikes, south of CR 48. The tornado tracked northeastward with winds of 150 mph, an EF3. One home was destroyed along CR 54. It gradually weakened and lifted northeast of the intersection of CR 51 and CR 66, 7 miles west northwest of Lafayette.

CHAMBERS COUNTY --- 1.6 NNE BUFFALO [32.97, -85.37], 2.3 ESE FIVE PTS [33.01, -85.29]

04/27/11 20:19 CST 5K Tornado (EF1, L: 5.24 mi , W: 150 yd) 04/27/11 20:28 CST 0 Source: NWS Storm Survey

A tornado touched down 2 miles southeast of White Plains, along CR 225, where it downed several trees and caused major damage to a single family home. The tornado moved east northeast and crossed CR 178 and 176 where numerous trees were knocked down. The tornado crossed CR 222 and lifted near CR 267 where additional trees were knocked down. Damage along the path was consistent with an EF1 rating with winds up to 110 mph.

CHAMBERS COUNTY --- 2.1 E FIVE PTS [33.02, -85.29], 0.5 ENE HICKORY FLAT [33.08, -85.26]

04/27/11 20:29 CST 10K Tornado (EF1, L: 5.01 mi , W: 100 yd) 04/27/11 20:38 CST 0 Source: NWS Storm Survey

A tornado touched down along CR 267, just north of the end point of the White Plains tornado. The paths did not join at any point as both damage widths were relatively small. Damage at CR 267 included several sheared tree tops and several uprooted trees. The tornado tracked northeast where it crossed CR 270 where additional trees were knocked down and an outbuilding sustained minor roof damage. The tornado traveled northeast and passed just east of Finley, and lifted along CR 278 where minor tree damage was noted. Damage along this path was consistent with an EF1 rating with winds of 90 mph.

CHILTON COUNTY --- 0.6 NE COOPER [32.78, -86.54], 2.5 ENE COOPER [32.79, -86.51]

A tornado briefly touched down near the intersection of US Hwy 31 and CR 24, just northwest of Verbena and uprooted a few oak trees. The tornado moved northeast, and crossed CR 597 where it damaged a metal carport of one single family home and the roof of a mobile home. In addition, many trees were knocked down in a 50 yd wide path. The tornado quickly dissipated along CR 59, south of CR 24. Damage along this path was consistent with an EF0 rating and winds of 80 mph.

A powerful storm system crossed the Southeast United States on Wednesday, April 27, 2011, resulting in a large and deadly tornado outbreak. This epic event broke the record for number of tornadoes in a day for the state of Alabama, becoming the most significant tornado outbreak in the state's history.

Central Alabama had two rounds of severe weather that day. During the early morning hours, a Quasi-Linear Convective System quickly moved across the northern half of the National Weather Service, Birmingham county warning area. Straight line winds of 90 mph (78kts) or greater and 11 tornadoes lead to widespread damage and power outages. During the afternoon, long-lived supercell thunderstorms produced long-track, strong and violent tornadoes. Destruction and loss of life across many towns and communities was devastating.

The hardest hit areas included Shottsville and Hackleburg, both in Marion County, where winds of 160 mph and 210 mph respectively, caused unimagineable damage. Cordova, in Walker County, was hit twice; by a tornado along the Quasi-Linear Convective System during the early morning hours and again in the afternoon by a long-track EF4 tornado. A long track tornado moved across the city of Tuscaloosa and the western suburbs of Birmingham, resulting in the complete destruction of whole neighborhoods and numerous injuries and fatalities in those heavily populated areas. The same parent supercell produced another violent tornado in east Central Alabama as it tracked across St. Clair and Calhoun Counties, resulting in additional fatalities and incredible damage to a number of neighborhoods. Another violent EF4 tornado tracked across portions of Elmore and Tallapoosa Counties, including Lake Martin, destroying numerous homes and a large section of a mobile home park.

Most of the violent tornadoes from this day were captured on video by a number of people, including storm spotters and chasers, as well as numerous television news crews and remotely controlled web-enabled video cameras. This allowed unprecedented coverage and viewing of this historic event in real time from people worldwide.

ALABAMA, North

FRANKLIN COUNTY --- 0.7 S RUSSELLVILLE [34.51, -87.73]

04/04/11 12:42 CST 0 Hail (0.88 in)

04/04/11 12:45 CST 0 Source: Law Enforcement

Thunderstorm produced pea to nickel-sized hail across Russellville.

Date/Time

Location

Injuries Crop Dma Thunderstorm winds knocked a tree down along County Road 671. North Alabama averted most of the severe weather associated with a large severe weather outbreak across the deep South. An initial area of elevated thunderstorms followed by a quasi-linear convective system (QLCS) moved through during the morning hours ahead of a northward advancing warm front. The front eventually reached northern Alabama, but persistent rain and thunderstorms through the day limited the instability available to fuel a more widespread severe weather threat during the afternoon and evening hours. Rainfall amounts of 2 to 4 inches resulted in brief flooding of small creeks near Florence and Tuscumbia, and more nuisance minor street flooding elsewhere. As the strong cold front and upper level trough approached during the evening, a thunderstorm and meso-cyclone was responsible for knocking a couple of trees down in DeKalb County. FRANKLIN COUNTY --- 0.9 SE RED BAY MUNI ARPT [34.44, -88.14], 0.9 NW RED BAY [34.44, -88.14] 04/20/11 03:18 CST Lightning 5K 04/20/11 03:18 CST n Source: Emergency Manager Lightning from a thunderstorms struck a house near the town of Red Bay during the early morning hours of April 20. FRANKLIN COUNTY --- 2.3 NNE CHESTNUT RIDGE [34.36, -87.60], 0.3 WSW DIME [34.32, -87.63] 04/20/11 03:40 CST 0 Thunderstorm Wind (EG 50 kt) 04/20/11 03:40 CST Source: Emergency Manager Damaging straight-line winds caused numerous trees and powerlines to go down along Highway 243 and County Road 79. This damage continued south along CR 79 to the Winston/Marion County line. LAWRENCE COUNTY --- 4.8 SW LEOLA [34.33, -87.37], 3.0 SSW LEOLA [34.34, -87.33] 0 04/20/11 03:58 CST Tornado (EF1, L: 2.62 mi, W: 100 yd) 04/20/11 04:02 CST 0 Source: NWS Storm Survey A brief EF-1 tornado (95 MPH max winds) touched down on the east side of the Sipsey Wilderness Area, along Forest Service Road (FSR) 208. Numerous trees were snapped and uprooted along a path that tracked nearly 3 miles northeast, corssing Highway 33 and ending around FSR 244 near Black Warrior. This tornado was embedded within a larger line of severe thunderstorms producing damaging straight-line winds. Additional sporadic areas of damage, mainly trees, were seen around the wilderness area. LAWRENCE COUNTY --- 0.6 W MOULTON [34.48, -87.29] 04/20/11 04:05 CST 0 Thunderstorm Wind (MG 54 kt) 04/20/11 04:10 CST Source: Amateur Radio Damaging winds measured in excess of 60 MPH knocked down trees and powerlines portions of Lawrence County, especially in Moulton. This resulted in a widespread power outage in Moulton. MORGAN COUNTY --- 1.7 NW PUMPKIN CENTER [34.49, -87.10] 04/20/11 04:10 CST 3K Thunderstorm Wind (EG 50 kt) 04/20/11 04:15 CST 0 Source: Newspaper A large tree was uprooted on Brown Road in Danville. damage from southern Franklin across Lav				
indicating wind speeds of at least 70 mph of	=		=	_
wo injuries. As the bow echo continued e	astward, numerous reports of tre	es and damage t	o small structures	were reported.

A mesoscale convective system rolled through northern and central Alabama during the late evening hours of the 20th, and exited shortly after midnight on the 21st. Prolific lightning was generated with mainly elevated thunderstorms within the anvil region of this system across northern Alabama. A line of strong to severe thunderstorms extended south from the upper level circulation center which tracked east from northwest and west central Alabama. The storms produced sporadic thunderstorm wind damage, knocking down several trees in Franklin County. Most of the damage further east were tree limbs that did cause isolated small power outages. Although most areas received one half to one inch of rainfall, there were local amounts of one to just over two inches. This resulted in mostly nuisance minor street flooding, although one road was closed in Franklin County due to more substantial runoff.

Following the storms, a meteorological phenomenon known as a wake low developed which produced a short period of damaging non-thunderstorm winds in Marshall County. A wind gust of 60 mph was registered with this system at the Albertville, Alabama AWOS

station (K8A0). Several power outages were reported through the event.

Tornado (EF2, L: 30.32 mi , W: 880 yd)

Source: NWS Storm Survey

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

A weak tornado touched down east of Cold Springs, toppling and snapping numerous trees. Several sheds sustained minor damage in this early part of the track. The storm crossed Highway 69 where it damaged a large shed. Additional damage was noted as the tornado tracked northeast across County Road 46, where trees continued to be snapped and damage sustained to many chicken coops, some of which collapsed. After crossing Interstate 65 just south of Dodge City, additional chicken coops and trees were damaged along the path of the storm.

The tornado then increased in strength as it approached Wallace State College in Hanceville, where winds were estimated to peak at 120 mph (EF-2 intensity). Eight large metal power poles were bent over just above the base and several campus buildings had significant portions of metal roofing torn off. A mid-rise under construction had its windows blown out, while the high-rise building sustained additional minor damage. The connected construction crane remained standing. To the south of the main track, in Hanceville proper, significant numbers of large pine, poplar and other hardwood trees were toppled onto houses. The roof of the high school gym in town was partly destroyed and additional small buildings near downtown Hanceville sustained damage..

The tornado continued its track northeast from Hanceville, nearly paralleling Highway 91. Between Center Hill and Walter, large hardwood trees were found snapped and twisted. In addition along County Road 645, a barn was nearly destroyed. Continuing northeast along a path, just south of Holly Pond along Highway 91, a portion (1/3 to 1/2) of a residential shelter or shed was destroyed and a portion of a chicken house was badly damaged.

Additional damage was seen along County Road 1742 and 1753, several miles northeast of Holly Pond, and along Highway 231 in extreme northeast Cullman county. This damage is considered to be with the same complex of storms that rolled across the area during the early morning hours April 27th, however there is too much distance between damage points to be considered one long track tornado.

Direct Fatalities: M20VE

CULLMAN COUNTY --- 3.5 E JOPPA [34.26, -86.46], 3.9 ENE JOPPA [34.26, -86.45]

04/27/11 05:20 CST 0 Tornado (EF0, L: 0.63 mi , W: 75 yd)

04/27/11 05:22 CST 0 Source: NWS Storm Survey

This tornado initially touched down northeast of CR 1850 in Cullman county. It snapped numerous hardwood and softwood trees along it's path in this location. The tornado then quickly moved northeast into Marshall county, where it continued it's path into Marshall County.

MARSHALL COUNTY --- 1.5 W NIXON CHAPEL [34.20, -86.41], 1.1 NNW HYATT [34.24, -86.36]

04/27/11 05:22 CST 40K Tornado (EF1, L: 4.15 mi , W: 150 yd)

04/27/11 05:26 CST 0 Source: NWS Storm Survey

A tornado of EF-1 intensity with peak wind speeds of 95 mph tracked northeast from Blount County near County Road (CR) 21 (Big Spring Brow Road). The tornado uprooted and snapped numerous large hardwood trees from the Blount/Marshall county line to near the intersection of Cox Gap Road and Highway 64. Just farther northeast, additional trees were uprooted along Fairview Drive and between Nixon Chapel Road and Panky Road where the tornado appeared to broaden/widen its circulation before lifting before Pleasant Grove Road.

MARSHALL COUNTY --- 1.5 WNW RED HILL [34.26, -86.45], 2.0 ENE LAKEVIEW [34.35, -86.30]

04/27/11 05:22 CST 0 Tornado (EF1, L: 10.41 mi , W: 75 yd)

04/27/11 05:40 CST 0 Source: NWS Storm Survey

As the tornado moved into Marshall county, its peak winds strengthened to around 110 mph, becoming an EF-1 intensity tornado. On Feemster Gap Road a mobile home was rolled over several times. The mobile home hit a tree and fell back on its side with the roof badly damaged and the frame bent. No injuries were sustained at this location, but residents that had been inside the mobile home took shelter in an underground storm shelter minutes before the tornado hit. Other mobile homes nearby only sustained minor damage to the roofs and flashing underneath. Northeast of this, another mobile home was blown several feet from its original location (as noted by the location of its remaining porch). Behind this mobile home, an unanchored outbuilding was rolled several times and numerous large trees were uprooted and snapped in the field behind the home.

As the tornado moved through the Johnsons Mill community, several barns were damaged, with one or two completely destroyed. A chicken house on Fry Gap Road was completely destroyed, as well, near the intersection of Fry Gap Road and Thompson Falls road. Further northeast, another chicken house sustained major damage but was not completely destroyed on Brazelton Road near Fry Gap Road.

Northeast of these locations, near the intersection of Warranton Road and Browns Valley Road, another chicken house was completely destroyed and numerous trees were splintered and snapped off near the base. The tornado was likely at its strongest at this location, with a width of 75 yards. Damage continued along the peninsula between Big Springs Creek and Browns Creek on Guntersville Lake. Trees were snapped and oriented in a convergent pattern along the peninsula as the tornado was weakening and eventually lifting near the intersection of Highway 431 and Highway 69.

A fast moving tornado of EF-1 intensity produced peak wind speeds of 95 mph. This tornado was associated with a broad yet well-defined mesoscale convective vortex. The tornado touched down along County Road 14 (Diamond Road), and Red Hill Road. Large hardwood trees were snapped and uprooted in a convergent pattern along County Road 14 (Diamond Road) as the tornado moved rapidly northeast. Significant roof damage occurred to several chicken houses along Red Hill Road just west of County Road 14. The tornado lifted just north of Brookline Ridge Road near the extreme south side of Lake Guntersville

The tornado initially touched down just west of Guntersville Lake, near Spindle Top Drive and Highway 69. Numerous trees were snapped and uprooted in this location. The tornado then continued northeast across County Road (CR) 14 and across Cha-la-kee and Cotton Roads, where several homes had damage to shingles and numerous large trees were uprooted.

The tornado then moved northeast across Guntersville Lake and strengthened as it crossed Buck Island. Numerous trees were snapped and uprooted across the Buck Island community. Several power poles were snapped near their bases and numerous homes sustained minor roof damage. Several piers and sheds were also destroyed. Damage was rated EF-1 through this area.

Next, the tornado crossed east over Guntersville Lake and struck Lake Guntersville State Park as an EF-2. Hundreds of trees were twisted, snapped and uprooted through the northern half of the State Park. Several RV campers were damaged in the camp grounds and minor roof damage was observed at the camp lodge.

The tornado continued northeast, just to the east of Highway 227, where hundreds of additional trees were snapped and uprooted along the west-facing valley wall. The tornado moved northeast as an EF-2, destroying a trailer and rolling another near Oliver Road, between Williams and Martin Drive. A barn and shed were also demolished.

The tornado then continued northeast crossing Highway 227 near Morgan Cove Road, twisting and uprooting several trees.

MARSHALL COUNTY --- 1.3 E HIGHPOINT [34.25, -86.26], 0.6 SSW LANE [34.31, -86.23]

04/27/11 05:30 CST 0 Tornado (EF1, L: 4.58 mi , W: 50 yd) 04/27/11 05:40 CST 0 Source: NWS Storm Survey

A tornado of EF-1 intensity produced peak wind speeds up to 110 mph. The tornado touched down near the intersection of State Highway 325 and Max Graben Circle southwest of Albertville. From there, the tornado moved northeast across Section Line Road and State Highway 205. The tornado snapped and uprooted numerous hardwood and softwood trees along the path. Trees were knocked down onto several residences. The tornado crossed State Highway 431 north of Albertville near State Highway 426. As it crossed George Wallace Drive north of Highway 431, a chicken house was completely destroyed on Arbor Acres Road. Other chicken houses on the same property sustained roof damage and lost tin from the sides of the structures.

04/27/11 05:30 CST 0 Tornado (EF1, L: 5.69 mi , W: 50 yd) 04/27/11 05:40 CST 0 Source: NWS Storm Survey

A tornado of EF-1 intensity produced peak wind speeds up to 110 mph. The tornado touched down near the intersection of Section Line and Beck Roads in Lattiwood. The tornado then moved northeast along Oneonta Cutoff Road and eventually crossed State Highway 205. The tornado snapped numerous hardwood and softwood trees along the path and knocked trees on residences. Snapped power poles were found along the path. Additional tree damage occurred northeast of Highway 205 near the intersection of Brashers Chapel and Wyeth Mountain Roads. Here, several barns were completely destroyed and numerous outbuildings had most of the tin removed from the roof.

MARSHALL COUNTY --- 1.8 N HYATT [34.26, -86.35], 1.2 W MOUNTAINVIEW [34.30, -86.32]

A tornado of EF-1 intensity produced peak wind speeds of up to 110 mph. The tornado touched down just south of Guntersville near the intersection of Pleasant Hill and Section Line Roads (State Highway 166). From there, the tornado moved northeast crossing Pleasant Grove Road, snapping and uprooting numerous hardwood and softwood trees. At the intersection of Pleasant Hill Church Road and Community House Road, the steeple of the Pleasant Hill Church was removed and thrown about 100 feet. The porch columns were also removed. A residence next to the church sustained damage when the wooden front porch was removed and thrown behind the house about 100 feet. Roof damage resulted from large branches being knocked down onto the house. In a field across Pleasant Hill Road, a wide swath of trees were snapped and uprooted.

A tornado of EF-1 intensity produced peak wind speeds of up to 105 mph. The tornado tracked northeast from Lake Guntersville near McKee Island, west of State Highway 79 across the north end of Buck Island, then lifted near Star Point. The tornado damaged a marina just west of Highway 79 where a canopy collapsed. The tornado then crossed Joe Starnes Field (Airport) and snapped and uprooted many trees along Buck Island Road on the north side of Buck Island. The tornado produced damage over Star Point, along Milky Way Road, Monsanto Road, and Star Point Road. Trees were mostly snapped, twisted and uprooted at these locations. The tornado crossed over Lake Guntersville at several locations along its path.

DEKALB COUNTY --- 2.5 WNW GROVE OAK [34.45, -86.09], 2.3 N GROVE OAK [34.46, -86.04]

04/27/11 05:49 CST 0 Tornado (EF1, L: 2.66 mi , W: 880 yd)

A tornado with EF-0 intensity produced peak	wind speeds of up to 85 mph. Th	ne tornado touched	down near the inte	ersection of County Road 24 and Batts
Road while embedded in a larger region of s				-
ndicated a funnel that descended and lifted	several times along the damage p	ath.		
The tornado continued eastward moving para	allel to Snake Road and County R	oad 24 where a co	ncentrated region	of numerous large trees were uprooted
and snapped. Several houses had shingles		-		
County Road 24, between Zehner Road and		ed damage associ	ated with this torna	do dissipated near Browns Ferry Road
as a secondary circulation developed to the	south of the tornado.			
MORGAN COUNTY 1.7 N TRINITY [34.65	, -87.08], 3.5 NE TRINITY [34.65,	-87.03]		
	04/27/11 10:20 CST		0	Tornado (EF1, L: 2.74 mi , W: 75 yd)

This tornado touched down within the Decatur Industrial Park to the west of Red Hat road and tracked east northeast with a concentrated damage path of roof damage to an industrial building and numerous hardwood trees snapped 20 feet from the base. Peak winds were estimated at 105 mph at this location. Minor roof damage to another industrial complex along the Tennessee River was noted. At this location numerous trees were uprooted and were pointing to the northeast. This tornado then crossed the Tennessee River and moved into southeastern Limestone county.

A tornado of EF-1 intensity produced peak wind speeds up to 105 mph. The tornado touched down along the downslope portion of Drake Mountain near the intersection of Pulaski Pike and Cedar Point Drive. A concentrated area of damage consisting of snapped hardwood trees, roof and gutter damage was seen along Cedar Point Drive and Green Meadow Road. Less damage was noted along a ridge that extended from Wade Mountain. Another concentrated area of damage that consisted of tree and roof damage was seen along the downslope portion of Smithers Mountain in the Mount Charron Estates and Valley View Estates neighborhoods. The tornado continued east-northeast with the most notable EF-1 damage occurring along Moores Mill Road north of Winchester Road where numerous hardwood trees were snapped and/or sheared off with a convergent damage/debris pattern. Significant tree and roof damage was noted along Henson Drive, Trailwood Drive and Bradford Lane before the tornado dissipated along Briar Fork Waterway.

MADISON COUNTY --- 0.7 WSW BLOUCHER FORD [34.87, -86.49], 1.9 S NEW MARKET [34.87, -86.43]

A tornado of EF-0 intensity produced peak wind speeds up to 85 mph. The tornado touched down north of Rube Robinson Road just east of Macon Lane while embedded within a larger region of straight-line wind damage associated with a bow echo. Numerous trees were knocked down with many hardwood trees snapped and sheared along its track near Buckhorn High School. The tornado tracked east-northeast across Winchester Road shearing off the top half of numerous hardwood trees before dissipating along the upslope portion of Lewis Mountain.

JACKSON COUNTY --- 1.3 ENE BOLIVAR [34.91, -85.78]

04/27/11 13:40 CST 1 0 Tornado (EF4, L: 25.75 mi , W: 880 yd) 04/27/11 14:12 CST 0 Source: NWS Storm Survey

A violent long track tornado developed on the north side of Lewis Smith Lake along County Road 310 where some light damage was found. The tornado tracked northeast snapping numerous large trees and causing significant structural damage to residences along County Roads 222 and 436 near Grandview. The tornado tracked northeast into the city of Cullman. Some of the worst damage occurred just northeast of U.S. Highways 31 and 278. Several small retail buildings were completely destroyed. along with the near total destruction of a large church. The tornado tracked across State Highway 157, then caused additional damage north of State Highway 69 between Simcoe and Pleasant View. Just north of Fairview along County Roads 1559 and 1564, 2 homes were destroyed with significant portions of the homes not found. Further northeast along County Road 1589, the tornado caused major structural damage to several old (early 1900s) homes. Numerous hardwood trees were debarked. A 1/4 to 1/2 mile wide corridor of significant damage persisted between Fairview and the Morgan County line.

Direct Fatalities: M68PH

MORGAN COUNTY --- 1.9 SSE GUM POND [34.31, -86.65], 1.9 NE RYAN XRDS [34.35, -86.58]

04/27/11 14:12 CST 0 Tornado (EF4, L: 5.33 mi , W: 880 yd) 04/27/11 14:16 CST 0 Source: NWS Storm Survey

A violent tornado tracked from Cullman County into extreme southeast Morgan County near the town of Hulaco. Peak wind speeds of up to 175 mph caused significant damage between Hyatt Bottom Road and Blocker Road, just east of State Highway 67. Several cinder block and old construction homes were destroyed, and numerous trees were snapped and sheared toward the base.

		Injuries	Crop Dmg	

A violent tornado with peak wind speeds of 190 mph crossed into northwest Marshall County (from Morgan County). The most severe damage occurred on either side of U.S. Highway 231 north of Arab -- particularly in the Ruth community and along Hog Jaw Road -- about 3 miles north of Arab. Along Hog Jaw Road, a large storage shed with farm equipment was destroyed with some of the large machinery tossed 10 to 20 yards around the shed. In the Ruth community, Mount Oak and Frontier Roads were hardest hit where a cinder block/cement home was nearly wiped clean. Debris from a home on Frontier Road was thrown 50 to 100 yards away. A family of 9 was in this house and 5 were killed. A trailer was missing and a metal-bolted garage was wiped clean of its foundation. Along Frontier Road, a large brick home was nearly wiped clean off its foundation with several large trees ripped out of the ground and missing. Further northeast along the path, along Walnut Ridge, a one-story home was severely damaged with the roof missing and a trailer that was tossed into a tree. Several concrete power poles were bent over as the tornado crossed U.S. Highway 231, some bent at the base. One the east side of Highway 231, a gas station building was completely demolished and two gas pumps were ripped from the ground and missing. The canopy over the pumps remained mostly intact.

The tornado continued toward Union Grove. The degree of damage weakened somewhat but several homes had significant damage where the top stories and roofs were destroyed and the external walls had collapsed. Along County Road 240, a double-wide manufactured home was destroyed and a large garage collapsed but the well-built roof remained intact.

The tornado significantly weakened as it crossed the Tennessee River. On the other side of the river, the tornado snapped and uprooted numerous trees as it crossed Walker Road and just across U.S. Highway 431 before lifting just northeast of Highway 431.

Direct Fatalities: F54PH, M1PH, F31PH, M56PH, M37PH

FRANKLIN COUNTY --- 2.7 S NIX [34.31, -87.79], 3.0 ENE OAK GROVE [34.44, -87.53]

04/27/11 14:28 CST 27 50M Tornado (EF5, L: 16.95 mi , W: 1760 yd)
04/27/11 14:45 CST 0 Source: NWS Storm Survey

A violent long track tornado continued it's path from Marion County into southern Franklin County north of Hackleburg. Significant devastation occurred throughout the city of Phil Campbell. Prolific damage was noted from the intersection of CR 51 and Alabama Highway 237, to the intersection of CR 81 and CR 75. Within a two mile corridor of either side of the railroad tracks the damage was significant. Within this corridor, several well constructed houses were destroyed. Along Bonner Street, multiple block homes were leveled to the ground with the block foundations destroyed. A twenty-five foot section of pavement was sucked up and scattered. Chunks of the pavement were found in a home over 1/3 of a mile down the road. The damage in this area was consistent with EF-5 damage.

In addition, at least three churches along the path sustained significant damage. One church in Phil Campbell was completely destroyed with only the slab remaining.

Multiple mobile homes throughout the path were completely destroyed, and their mangled frames were tossed 25 to 50 yards. Cars were tossed and destroyed throughout the path of the tornado, with one car wrapped around a debarked tree in Phil Campbell. All along the path length, thousands of hardwood and softwood trees were snapped. Hundreds of trees were also debarked and twisted, and had only stubs of the largest branches remaining. EF-5 damage continued similarly northeast from Phil Campbell, roughly along County Roads 81 and 82 toward the community of Oak Grove.

In Oak Grove, the tornado may have reached a relative maximum in intensity well into the EF-5 category as the damage was slightly more intense and the path width was at a maximum of greater than one mile. A large swath of complete devastation was noted in Oak Grove along County Roads 38 and Smith Lane. A large well-constructed home with extensive anchoring was razed with debris carried well away from the site. A Corvette sports car was mangled and thrown 641 feet (measured). A block home next door was also disintegrated. Along Smith Lane a block home was wiped out and the only remains of a nearby chicken house was a small piece of a metal truss. In this same area, the tree damage was significant and a large percentage of trees were stripped bare.

The violent tornado continued to track northeast from Franklin County into Lawrence County as an EF-5 near the Mt. Hope area where significant devastation was incurred to single family homes and a restaurant. Nothing but the foundation and a pile of debris remained in this area, and a small portion of the restaurant foundation buckled. Thousands of hardwood and softwood trees were snapped, with a significant number of trees twisted and debarked with only stubs of branches remaining. Many mobile homes were also destroyed with the frames mangled, and a single family home was completely destroyed with the walls and contents strewn over a hundred yards. Further northeast the damage was slightly less intense, with more trees snapped and twisted as the tornado reached Highway 24. At this location multiple chicken houses were completely destroyed with much of the debris wrapped around debarked trees. TVA high voltage power line trusses were also destroyed at this location. As the tornado continued northeast more significant damage occurred in and around the Langtown community north of Moulton. On the west side of Alabama Highway 33, several homes sustained significant damage with roofs missing or only interior rooms remaining. A nearby store and gas station also sustained significant damage. The tornado strengthened again to a high end EF-4 as it moved over County Roads 214 and 298, where multiple houses and mobile homes were completely destroyed. Several cars were tossed into fields and wrapped around trees along County Road 291 and 292. One vehicle was tossed into a large hardwood tree that was also debarked. Tree and mobile home damage continued along County Roads 217 and 222, where a handful of large high tension TVA power poles were destroyed. Sustained EF-4 damage continued northeast towards Alabama Highway 20, where a restaurant was completely destroyed and two single family houses were significantly damaged. Tree damage continued into extreme northeastern Morgan County.

04/27/11 15:01 CST 6 0 Tornado (EF4, L: 24.18 mi , W: 1260 yd) 04/27/11 15:30 CST 0 Source: NWS Storm Survey

A violent long track tornado began it's life about 3 miles northeast of Section producing damage of EF-0 to EF-1 intensity with peak wind speeds of 70 to 90 mph, snapping or uprooting several softwood and hardwood trees. The tornado rapidly intensified and began producing high end EF-3 to low end EF-4 damage within a matter of minutes, with peak wind speeds of 150 to 170 mph, and a path width of 1/2 to 3/4 mile as it roared into areas northeast of Pisgah and north of Rosalie. Residents interviewed remarked that up to 3 tornadoes merged into one very large tornado. There was evidence of this in the damage swath.

The tornado swarmed several mobile homes and block foundation homes in its path, snapping or uprooting thousands of trees. Numerous trees were debarked in the process. The tornado leveled at least 2 mobile homes and swept their remains hundreds of yards downwind. Three were killed in 3 separate residences (6 total fatalities - 2 in Pisgah and 4 in the Higdon/Flat Rock communities). Several vehicles were launched or swept several yards in different directions, in a few cases up to 50 yards. The Friendship Church roof was heavily damaged. Several farms were also affected, with barns and chicken houses heavily damaged or destroyed.

As the tornado continued its path, it intensified further on approach to Flat Rock and Higdon, producing damage of high end EF-4 intensity with peak winds up to 190 mph. The tornado killed three from the same family at a residence southwest of Flat Rock. The tornado mowed thousands in up to a 3/4 mile wide path. One well-built block foundation home literally exploded as the tornado struck, lifting and sweeping all its structure and contents downwind, in some cases several hundred yards. Miraculously, a mother and 3 children taking refuge in a hallway were completely unharmed. At this farm, all fencing was destroyed and up to 19 cattle perished. Two chicken barns were completely obliterated and swept away and unidentifiable. A propane tank was lifted from the previous location of chicken barns and dropped over 100 yards away in front of the destroyed home.

Direct Fatalities: F81PH, M89PH, F75PH, M77PH, F58PS, F80PS

MORGAN COUNTY --- 2.3 NW TRINITY [34.65, -87.11], 2.9 N TRINITY [34.66, -87.07]

04/27/11 15:17 CST 0 Source: NWS Storm Survey

The tornado briefly crossed rural areas of Northwest Morgan County. High resolution MODIS satellite imagery combined with aerial surveys show a well-defined path of tree/vegetation damage between 1/2 and 3/4 mile wide indicative of low end EF-3 wind speeds of around 140 MPH. Just before crossing the Tennessee River into Limestone County, this tornado may have done some unconfirmed structural damage to a few buildings in an Industrial Park area along Mallard Fox Dr NW and Independence Ave.

The violent tornado continued it's path from the Tennessee River along the Lawrence/Limestone county line northeast through Tanner and into the east Central portion of Limestone County. Homes were completely obliterated along a wide swath in the Tanner community. Nearly a dozen high tension power lines were snapped or taken to the ground in Limestone County. Concrete power poles were also snapped off at their base. A subsequent ground team, aided by a storm survey expert from the University of Alabama in Huntsville, surveyed the most intense damage in Limestone County. High end EF-3 damage was noted over a large area in eastern Limestone County along and north of the East Limestone High School. The intensity was maximized in Limestone County in the community of Tanner, with a large swath of EF-4 damage and a narrow corridor of high end EF-4 damage. Several well-constructed homes with anchor bolting were completely wiped clean. One home had the debris lofted over 300 hundred yards with large items carried completely away. Intense ground scarring was noted in this area. In addition, a large cargo container was picked up and blown approximately 600 yards and several cars were carried airborne for hundreds of yards. In all, hundreds of homes received moderate to major damage along the path with many of these being total losses.

Direct Fatalities: F54PH, M55PH, F39PS, F67VE

FRANKLIN COUNTY --- 1.3 SSE HODGES [34.31, -87.92], 2.2 ESE HODGES [34.32, -87.89]

This tornado decreased quickly in intensity as it moved into southeastern Franklin county after producing EF-3 damage in Marion county. Just after crossing the Marion/Franklin county line, the tornado collapsed two chicken houses and ripped roofing material off of two others nearby along highway 187. The tornado continued its brief track northeast and ripped much of the roof off of a two story home as it approached highway 172. Based on roof damage observed and widespread nature of large trees blown down or snapped off near their base, winds were estimated at 120 mph -- EF-2 tornado. Another house nearby experienced significant roof damage as well. The path width at this point was around 300 yards. As it reached highway 31, some minor shingle and home damage was observed. However, the tornado moved over a mainly forested portion of this area, continuing to snap/uproot numerous large trees, snapping several near their bases.

As the tornado moved toward Old Line Road, additional damage to houses was observed. A few homes had portions of their roofs peeled off. In addition, a mobile home was destroyed. In this area a car was totaled by the tornado. Numerous large trees were snapped off or blown down as well. A barn was heavily damaged by trees in this area as well. The path width of the tornado was largest at this point and was estimated to be around 550 yards. A path of numerous large trees being snapped or blown down continued just northeast of this road. The tornado appeared to gradually weaken and lift over the forested area northeast of Old Line Road as little additional damage was seen from ground surveys. New satellite imagery reveals tree damage extending a little over 1/2 mile east of Old Line Road. Due to this new information, the end point was adjusted slightly east from its original point (5/17/12).

FRANKLIN COUNTY --- 4.2 WSW NIX [34.34, -87.85], 2.6 WNW NIX [34.36, -87.82]

04/27/11 15:21 CST 30K Thunderstorm Wind (EG 70 kt) 04/27/11 15:23 CST 0 Source: NWS Employee

A few homes or farm buildings had damage to roofs along CR 57. Also a small Bradford Pear tree was uprooted in this area.

However, more substantial damage occurred further northeast within this wind swath near the intersection of Cleveland Branch road and CR 57. In this area, multiple pines were uprooted or blown over. In addition, some tall thin pine trees were snapped off midway down to the ground, even a few near their base. Three very large pine trees and oak tree were uprooted further northeast of the Cleveland Branch road intersection with CR 57. In this same area some pine trees were also uprooted on the other side of the road.

Additional damage continued along Cleveland Branch Road, where a farm building was totally destroyed. Additional tree damage and some minor roof damage continued along this road, but to a lesser extent.

FRANKLIN COUNTY --- 1.5 NW NIX [34.36, -87.80], 0.9 N LIBERTY HILL [34.36, -87.77]

A violent tornado continued its wide path of violent destruction across the northern tip of DeKalb County in the Shiloh community. The tornado killed 6 people in this area (12 total along its path across Jackson and DeKalb counties). Several cinder block foundation homes and mobile homes were completely destroyed or swept away. In addition, thousands of large trees were sheared off toward the base. An older two-story and fairly well-built log cabin home was destroyed. The top story of this home was lifted off, moved about 20 yards and twisted 180 degrees. The lower story collapsed and was shifted off its foundation. A senior citizen van was lofted and dropped into a field nearly 400 yards away. At least 3 chicken barns collapsed with a high loss of livestock noted. The tornado crossed into Dade County Georgia with a 1/4 to 1/2 mile wide path along County Road 155 north of Highway 75.

The tornado crossed in Madison County east of Limestone County Prison...along Orvil Smith Road with a path width of ½ mile. The tornado maintained an EF-3 strength with winds of 140 to 160 MPH and a path width between ¼ and ½ mile for much of its track northeast across Old Railroad Bed Road and Ford Chapel Road, before narrowing to around 300 yards in Anderson Hills. Dozens of well-constructed homes were destroyed, in some cases with all exterior walls collapsing in both single and two-story homes. At least 3-5 mobile homes were either destroyed or swept completely clean with no evidence of debris. At least 2 other well-constructed homes had complete wall collapse in Anderson Hills and were shifted off their foundation. This damage was once again consistent with low end EF-4 wind speeds of around 170 MPH.

Numerous tall pines and other hardwood trees were snapped, uprooted and debarked along the entire path. The path width widened once again to around ½ mile as the tornado tracked through residential areas along Bald Eagle Lane, Old Eli Road and Ginnery Row. At least 2 of these homes had complete wall collapse, but these structures had foundation straps and nails in lieu of bolts. At least one fatality was confirmed at one of these residences. Eight additional fatalities occurred in Madison County along the track of this violent tornado. The damage was consistent with high end EF-3 wind speeds between 140 and 160 MPH. The tornado lifted just south of the Patterson Lane after twisting irrigation equipment and snapping additional trees. Just to the northeast of this location, the tornado touched down again as an EF-0 tornado with peak wind speeds of 70 MPH. Along Grimwood Road and Walker Lane, south of Hazel Green, the tornado uprooted and snapped several trees. The tornado weakened or may have lifted briefly across extreme northeast Madison County before re-strengthening again as it entered Lincoln County in Southern Middle Tennessee.

An EF-1 tornado reaching peak wind speed of 105 mph began near Smith Road. Several houses sustained a significant amount of shingle damage. Numerous large trees were uprooted, snapped off, and an RV trailer was overturned along this road. Some of these trees were snapped off near their base. Also, the edifice of a brick home was damaged. At this point, the width of the tornado was at it's widest point (approximately 100 yards). As this tornado moved east northeast across Iron Horse Trail Road and across Orvil Smith Road, several areas of large trees (some snapped) were observed. This tornado continued east northeast, weakening slightly, but still uprooted large trees and produced minor roof damage. Portions of Shortleaf Road and Poplar Green Road were affected next by similar damage. Some fences were blown down in this area. The tornado lifted shortly before reaching Wall Triana Highway.

04	4/27/11 15:53 CST	0	Tornado (EF0, L: 8.72 mi , W: 50 yd)

04/27/11 16:02 CST 0 Source: NWS Storm Survey

The tornado began near mile markers 342 and 343, producing EF-0 intensity winds of up to 70 mph and snapping trees. The tornado then continued moving northeast producing generally minor and sporadic tree damage in rural areas of Limestone county along Brownsferry Road. It then continued its path northeast into Madison county.

MADISON COUNTY --- 2.4 NNW MADISON [34.73, -86.79], 1.3 ENE MONROVIA [34.78, -86.70]

04/27/11 16:02 CST 0 Tornado (EF1, L: 5.90 mi , W: 75 yd) 04/27/11 16:07 CST 0 Source: NWS Storm Survey

The tornado continued its path from Limestone into Madison county producing minor and sporadic damage. As it moved into Madison county the tornado intensified. It began uprooting large trees and producing some minor damage to homes in several locations. The most notable damage occurred in Madison along Balch Road near Kentucky Drive, Wall Triana at Gooch Lane, along McCrary Road, and further northeast along Capshaw Road between Nance Road and Jeff Road. From McCrary Road to Jeff Road, the width of tornado damage increased to approximately 75 yards. The tornado then continued moving northeast across Bishop Creek Road to Holbrook Drive. Damage along this portion of the track included uprooted large trees, some snapped-off tree tops, and minor roof damage. The tornado finally lifted further northeast on Holbrook Drive.

CULLMAN COUNTY --- 2.7 SSW ARKADELPHIA [33.87, -87.00], 2.5 E ARKADELPHIA [33.90, -86.93]

04/27/11 16:05 CST 20M Tornado (EF4, L: 4.42 mi , W: 440 yd) 04/27/11 16:11 CST 0 Source: NWS Storm Survey

A large violent tornado continued it's track from Walker County into the Huntsville County Warning Area (CWA) across the very southern tip of Cullman County, from about 3 miles southwest of Arkadelphia to just over 2 miles ESE of Arkadelphia. This tornado then tracked out of the Huntsville CWA into Blount County. In Cullman County, a wide swath of pine and hardwood trees was found snapped at the bases or splintered several feet off the ground, with some debarking of trees. South of Hwy 91 along Washington Loop, several homes were damaged or destroyed. A mobile home was obliterated and the frame was found at least 200 yards to the east up a hill. A cinder block home was wiped out, with the contents landing across the road, while the cars nearby were tossed. A truck landed in a nearby hollow at least 50 yards away while a sedan was smashed as it landed about 130 yards away. Farming equipment in a barn was displaced into the hollow, including a hay baler and a tractor. The storm shelter by the residence was partially lifted and damaged. The person inside received minor injuries. Additional homes and buildings nearby were destroyed and only a few trees were left standing or not debarked. The main damage path was fairly well confined, as a well built home just at the edge of the track only sustained minor roof damage.

JACKSON COUNTY --- 2.1 SE FACKLER [34.79, -85.91], 2.6 ENE LONG IS [34.99, -85.64]

04/27/11 16:05 CST 1 0 Tornado (EF4, L: 20.24 mi , W: 1320 yd) 04/27/11 16:25 CST 0 Source: NWS Storm Survey

A violent tornado touched down northeast of Fackler along County Road 42 where several large trees were snapped and minor damage occurred to mobile homes. The tornado continued east-northeast producing tree damage as it crossed U.S. Highway 72 near the intersection of State Highway 117. On Oak Hill Road just east of Highway 72, large trees were snapped and several roofs were damaged. On County Road 286, a trailer was tipped over and a shed was partially destroyed.

The tornado continued northeast producing heavy tree damage. The tornado produced EF-3 damage along County Road 96 just northeast of the Stevenson Airport, where 24 high tension electrical truss towers were twisted and flattened. Just south of the intersection of County Road 96 and State Highway 277, a mobile home was obliterated and another home collapsed. Two other homes sustained structural damage along this section of road, two mobile homes were rolled on their side, and a metal barn was destroyed.

The tornado continued northeast and at the intersection of County Roads 255 and 256, the most significant damage was encountered and rated EF-4. A residence just to the south of this intersection was reduced to its foundation. A concrete slab at the front of the home was pulled up, and a set of concrete stairs was ripped from the foundation. A compact car was thrown about 50 yards.

To the northeast of the intersection, two well-built and well-anchored homes were also reduced to their foundations. A car was thrown approximately 50 yards across the street from one residence. Several large trees were snapped off a few feet above the ground. A third residence along County Road 256 had zero walls left standing. Across the street from this home, a mobile home was completely demolished and strewn along County Road 256.

The tornado continued northeastward, destroying a cinder block garage and damaging a mobile home along 6th Street just southeast of Bridgeport. The tornado crossed the Tennessee River, producing significant tree damage along County Road 91 before crossing into Marion County in Tennessee.

A violent long track tornado began in the Lakeview community northeast of Geraldine before tracking northeastward, generally parallel to and just east of State Route 75. Along this line, the tornado passed through Fyffe, Rainsville, Sylvania, and eventually into northern DeKalb County south of the Cartersville community, killing 25 people. On the first day of surveys, the survey team noticed initial damage in the Lakeview community where the path width was generally around 50 yards. This initial damage included mostly felled and snapped trees and structural damage to small buildings. Extensive damage was noted especially in Rainsville and Sylvania where the path width was estimated to over 1/2 mile wide. Damage in Rainsville included houses that were completely removed from foundations, with debris scattered for about one mile. Near this location, trees were debarked and a few mobile homes were completely destroyed, with debris strewn for about a mile downstream.

A narrow corridor of intense damage extended from Skaggs Road to Lingerfeldt Road (also known as County Road 180), extending toward County Road 514. Along Skaggs Road, a stone house was completely obliterated with much of the interior debris strewn well away from the structure. A supporting large cement stone pillar was ripped completely out of the ground. Another home along Skaggs Road was also leveled completely to the ground. The NOAA overflight showed significant ground scarring in this area and a walk through the nearby fields showed large pot marks and other sections of disturbed ground.

Slightly northeast along Lingerfeldt Road, numerous homes were leveled completely to their foundation with vehicles and debris strewn for hundreds of feet. Overhead photos and follow-up visual confirmation revealed a mangled vehicle tossed well into a ravine and resting up in the remainder of trees. At 1608 Lingerfeldt Road/County Road 180, a large two story brick home was completely obliterated with several of the supporting anchors ripped of the ground. A concrete porch was ripped off with pieces strewn up to 150 yards. A section of the asphalt driveway was pulled up. In addition, an anchored liberty safe weighing 800 pounds was pulled off its anchorage and thrown into a wooded area 600 feet away. When found, the safe's door had been ripped open and completely off. A large pick-up truck at this residence was found mangled in pieces over 250 yards away in the same wooded area. The residents of the home survived in a nearby storm pit. Of note, the storm pit was partially exposed by the tornado with dirt being sucked up and pulled away around the opening. Next door, a mobile home was completely disintegrated. The residents of the mobile there also survived in a storm pit. The section of damage from Skaggs Road to Lingerfeldt Road near the intersection with Crow Lane was deemed to be EF-5 intensity. Severe damage with high end EF-4 damage was noted in a corridor from County Road 515 through a neighborhood along County Road 441. In the east and south ends of the neighborhood, many one and two story homes were leveled to their foundation with debris scattered some distance. Several cars were thrown a large distance in this area. There was evidence of ground scarring as well as some sidewalk pavement pulled up in this location. However, some of the homes in this area appeared to be pushed off their foundation initially with limited anchorage.

In the Sylvania community, similar situation occurred with houses completely removed from foundations and debris blown far downstream. Some of these houses were connected to their foundations with anchor bolts and foundation straps, indicating a stronger construction of the homes.

Tornado damage continued from the Blake community, intersecting County Road 27, running parallel between State Highway 75 and Interstate 59 through Henager, Ider, to south of Cartersville.

In the Blake community, the tornado path width was estimated to be one half to three quarters of a mile. Along County Road 27 just southeast of Sylvania, significant damage was observed. All exterior and interior walls of several homes were completely destroyed with partial block and mortar foundations remaining. In one instance, a concrete slab that served as a porch was displaced a few feet and broken in half. Some hardwood trees in the area were stripped with no stubs of any branches remaining and were partially debarked. The Mountain View Baptist Church sustained significant damage. An old, one-story portion of the church dating back to 1902 and constructed of a brick and mortar exterior on wood frame walls was completely destroyed. A recent two-story addition to the church was constructed in 2004 and consisting of similar building materials was partially destroyed, with most exterior walls and nearly all interior walls fallen. A concrete block and mortar foundation was all that remained of a hallway adjoining the two buildings.

CULLMAN COUNTY --- 0.7 ENE CENTERVILLE [34.28, -86.92], 1.9 NE CENTERVILLE [34.30, -86.90]

04/27/11 18:09 CST 0 Tornado (EF0, L: 1.19 mi , W: 100 yd)

04/27/11 18:13 CST 0 Source: NWS Storm Survey

A short-lived tornado touched down nearly 4 miles northeast of West point and tracked northeast across Interstate 65 just north of the County Road 1282 overpass. The tornado snapped and uprooted trees along County Road 1282, with smaller trees damaged along County Road 1264 just west of Interstate 65. The damaged continued east of Interstate 65 along County Road 1282 where several trees were snapped and uprooted and a porch of a house was damaged.

DEKALB COUNTY 1.7 S FT PAYNE [34.41,	-85.73], 3.2 SE FISHER XRDS [[34.44, -85.63]		
	04/27/11 20:05 CST		0	Tornado (EF2, L: 6.47 mi , W: 250 yd)
	04/27/11 20:10 CST		0	Source: NWS Storm Survey

A significant tornado of EF-2 intensity with peak winds up to 120 mph tracked through southeast DeKalb County. The tornado first touched down along Dogtown Road (County Road 89) just south of Jennings Road where two small barns collapsed. The tornado then crossed Jennings Road and snapped and uprooted trees along Bear Creek Road and Adamsburg Road. A large number of trees were snapped or uprooted along Kelly Road and a barn sustained damage along McCurdy Drive.

The tornado began to strengthen rapidly as it approached Wallace Avenue (State Highway 35). A large metal farm building was leveled to the ground here and 4 power poles were snapped off completely. In this area, the tree damage was substantial. The damage was deemed to be EF-2 intensity at this location. A home on the north side of Highway 35 sustained damage and trees were also downed along Patricia Drive. The tornado continued to move northeast uprooting and snapping a large number of trees along Pumpkin Center Road. Trees were knocked down on several homes just west of the intersection of Pumpkin Center Road and Fischer Road. Minor damage was noted to homes on the east side of Fischer Road as the tornado began to lift.

A powerful storm system roared across the Southeast United States on Wednesday, April 27, 2011. In the wake of this system, hundreds of people were left injured and/or homeless, along with approximately 100 people who lost their lives in the northern Alabama area alone. Some of the devastation was literally unimaginable with countless homes, neighborhoods and even portions of cities or towns either partially or completely destroyed. This storm system would be responsible for one of the largest and deadliest tornado outbreaks to ever impact much of the southeastern region.

The powerful storm system that affected the National Weather Service, Huntsville service area would actually occur in three separate waves of severe weather that day. The first occurred during the early morning hours of April 27, 2011 roughly between the hours of 2 AM and 8 AM CDT, while the second occurred during the late-morning to early afternoon period. The third and most devastating wave occurred during the afternoon hours on Wednesday, with some of the most violent and destructive tornadoes to affect the central Tennessee Valley area in recent decades.

The worst areas impacted by these storms included the towns of Phil Campbell and Oak Grove in eastern Franklin County Alabama, Mt. Hope in western Lawrence County and the Tanner Community in eastern Limestone County. Along a line connecting these areas tracked an EF5 tornado with peak winds around 210 mph, the strongest and most violent on the Enhanced Fujita Scale.

Other areas impacted by the storms include the city of Cullman, where extensive damage occurred to buildings in the downtown area, and to the town of Fairview, both of which are located in Cullman County. Downstream, further significant damage occurred to the Ruth and Oak Grove communities in Marshall County. In addition, the communities of Rainsville and Sylvania along with the towns of Henagar and Ider in DeKalb County were severely impacted. Fatalities in DeKalb County alone numbered at least 33 people. Furthermore, the towns of Flat Rock, Higdon and Pisgah in Jackson County sustained incredible damage. The tornadoes that affected these areas were rated as an EF4 with maximum winds near 190 mph.

In most of these areas alone, numerous people lost their lives. These represent just several of the communities and towns impacted by the events of April 27, 2011. While the majority of the analysis and survey work conducted by the National Weather Service, Huntsville and its partners have been completed, there will undoubtedly be countless research studies conducted by both academia and operational personnel in order to further evaluate and understand the complex processes associated with this near unprecedented severe weather outbreak.

04/15/11 17:36 CST 0 Source: NWS Storm Survey

Tornado touched down just west of Highway 17 near the Red Springs area, and quickly intensified as it moved southeast of Butler towards the Tombigbee River. National Weather Service ground and aerial surveys shows a 600 yard wide path of trees snapped just above the ground or uprooted, with several homes either damaged or destroyed along the path across the Ararat Road, Dansby Road, and County Road 43. Several homes either had large sections of their roof removed with several mobile homes damaged or completely destroyed. The tornado continued east across the Tombigbee River into Marengo County Alabama. The Alabama Forestry Commission estimates timber losses along this tornado track to be near 4.3 million dollars. Property damages to homes are estimated to be near 1 million dollars.

WASHINGTON COUNTY --- 6.3 SSW ESCATAWPA [31.19, -88.44], 1.2 W DEER PARK [31.22, -88.34]

04/15/11 19:05 CST 3 2M Tornado (EF3, L: 5.93 mi , W: 400 yd)

04/15/11 19:15 CST 3 0 Source: NWS Storm Survey

Tornado moved into southwest Washington county from the Leakesville area of Greene County Mississippi. The tornado tracked near County Road 8 where several mobile homes were damaged or destroyed. Three fatalities and three injuries occurred in a destroyed mobile home in Deer Park on Box Road. The tornado lifted just prior to reaching Highway 45. Extensive tree damage nearly 400 yards wide was noted in several areas along the path.

Direct Fatalities: F38MH, M10MH, M13MH

The tornado touched down taking a large section of roof off of a wood frame single story home near the center of circulation, pulling a single-wide mobile home off of its foundation on the north side of the circulation, and lifting off the roof of a nearby double-wide mobile home on the south side of the circulation. The tornado circulation quickly widened to 200 yards and strengthened, rolling another single-wide mobile home 60 yards then causing it to disintegrate as it hit a large tree. The mobile home's bent undercarriage was left about 60 yards to the left of the tornado path. The tornado continued to the east and quickly lifted in a pine forest.

04/15/11 21:05 CST 30K Tornado (EF0, L: 1.24 mi, W: 80 yd)

04/15/11 21:09 CST 0 Source: NWS Storm Survey

Brief tornado touchdown in the city of Citronelle. Roofs were damaged on a few single-wide manufactured homes with minor roof damage to a few single-family wood frame homes. Some trees were twisted off near the tops. A section of metal roofing was removed from one unit of the Wahoo Apartments on South Center Street.

MONROE COUNTY --- 1.5 WSW TURNBULL [31.71, -87.15], 1.7 NE TURNBULL [31.74, -87.11]

04/15/11 21:31 CST 0 Source: NWS Storm Survey

Tornado snapped or uprooted trees along a 400 yard wide path then produced significant damage to 3 homes and 1 church in the Riley's Crossroads area. One home had 2 exterior walls collapsed, another had a large section of the roof removed. The tornado significantly damaged the roof of the Savannah Missionary Baptist Church removing large sections of the sheathing and removing the steeple.

BUTLER COUNTY --- 5.7 WNW GREENVILLE MUNI ARPT [31.88, -86.71], 2.8 WSW SEARCY [31.90, -86.66]

04/15/11 22:15 CST 0.15M Tornado (EF2, L: 3.32 mi , W: 400 yd)

04/15/11 22:20 CST 0 Source: NWS Storm Survey

The tornado touched down at the intersection of Ridge Road and Sherling Lake Road northwest of Greenville, and continued east along Sherling Lake Road strengthening to EF-2 intensity as it passed over the eastern-most sections of the Cambrian Ridge Golf Course. The tornado then crossed the Sherling Lake RV Park snapping numerous pine trees in a 300 to 400 yard wide path. The tornado crossed Highway 263 then lifted west of Highway 185.

ESCAMBIA COUNTY --- 1.8 ENE WALLACE [31.21, -87.20], 5.0 N KIRKLAND [31.25, -87.04]

04/15/11 22:53 CST 0 Source: NWS Storm Survey

Several trees down in the Appleton area where tornado path began. Near Highway 31 approximately 9 miles north of Brewton, the tornado had strengthened, where it destroyed one round top (quonset type) metal building, destroyed one small outbuilding, and produced shingle damage to one home on the south side of the tornado circulation.

ESCAMBIA COUNTY --- 3.9 NNE BOYKIN [31.20, -86.86], 5.4 NNW DIXIE [31.22, -86.76]

Tornado touched down approximately one half mile west of Damascus Road and quickly widened to near 300 yards and strengthened to EF-2 intensity. Near and along Damascus Road the tornado destroyed one wood frame home, and severely damaged or affected several other brick homes and adjacent manufactured homes. The tornado rolled one single-wide manufactured home onto its roof trapping the occupants inside for several minutes. Several minor injuries were reported. The tornado continued east crossing Eddie Jackson Road, Hoomesville Road, and Brooklyn Road where trees were snapped or uprooted along a 200 yard wide path. The tornado continued moving east into Conecuh County. Alabama Forestry Commission estimated the timber losses along this tornado track to be near 2.1 million dollars. Property damage to homes was estimated to be near 500,000 dollars.

The tornado continued east from extreme southeastern Conecuh County, Alabama. The tornado snapped or uprooted trees along a 150 yard wide path, producing damage to several homes, outbuildings and structures adjacent to Brooklyn Road. Several homes had significant roof damage with some having trees blown over onto them. The tornado crossed U.S. Highway 29 at County Road 56 then lifted as it moved across the Covington County Arena area producing roof damage to the Kiwanis Building.

Nickel size hail reported 4 miles east of Opp by SkyWarn amateur radio operator.

Numerous supercell thunderstorms developed in the late morning through the evening hours across Mississippi and Alabama. A series of long track tornadic supercell thunderstorms moved out of southeast Mississippi in the late morning, and crossed southwest Alabama in the late morning through the afternoon and evening hours. In southwest Alabama, the tornadoes missed the larger populated towns and communities, but did produce significant damage to numerous homes in rural areas. Several injuries were reported with 3 fatalities in Deer Park, Alabama (Washington County) from an EF-3 tornado during the early evening hours. Widespread damage to timber along several 200 to 600 yard-wide tornado paths resulted in significant losses to the timber industry. The Alabama Forestry Commission estimated timber losses in southwest Alabama to be near 7.3 million dollars.

The tornado was already on the ground as it moved out of extreme northeastern Clarke County Mississippi into northern Choctaw County Alabama approximately 4 miles to the southwest of the community of Yantley. The tornado then remained on the ground as it moved east across the entire width of extreme northern Choctaw county, before exiting the county by crossing the Tombigbee river north of the community of Oakchia. The tornado nearly paralleled County Road 32 as it moved east across the county, producing EF-3 damage. Considerable tree damage was noted along the entire path, with many trees snapped off above ground level in a 500 yard wide path. Extensive damage to homes and other structures was also noted. A few homes had their roof taken off and exterior walls collapsed. Several manufactured homes along the path of the tornado were also completely destroyed. Property damage to homes is estimated to be near 2 million dollars, with widespread damage to timber resulting in losses near 6.6 million dollars.

On the afternoon and evening of 27 April 2011, a historic outbreak of large, very damaging tornadoes occurred over the southern United States. The majority of the tornadoes occurred across the northern half of Mississippi and Alabama, however along the southern edge of the severe thunderstorm complex a supercell thunderstorm formed just southeast of Jackson Mississippi and tracked eastward across northern Choctaw County Alabama before moving into portions of south central Alabama. This supercell thunderstorm produced a continuous tornado track that was nearly 123 miles long.
