A tornado initially touched down in Macon County Alabama and crossed into Lee County approximately 1 mile southwest of Lee Road 3. It continued its northeastward path causing extensive tree damage across western Lee County. Dozens of houses and mobile homes on the western side of Auburn were heavily damaged due to falling trees. Several residences were destroyed. One female and one child were injured when trees fell on a mobile home. Significant damage was also noted in the Terrace Acres neighborhood, where homes were heavily damaged from falling trees. The tornado crossed the southern edge of Auburn University's campus and caused damage to the baseball facilities at Auburn High School and nearby homes. The tornado crossed interstate 85 at US highway 280 and continued moving to the northeast toward Lake Harding. Along the lake, extensive tree damage and damage to numerous homes and boathouses occurred. Several residences were destroyed or sustained complete roof loss. The tornado continued into Harris County Georgia (See November Storm Data from WFO Peachtree City).

Several waves of thunderstorms affected Central Alabama on Wednesday, November 16. The airmass ahead of a slow-moving, strong cold front became increasingly moist and unstable during the early morning hours. Rotating supercells within several broken lines of thunderstorms began producing damage just after sunrise in west Central Alabama. Isolated damage continued across the southern portion of the area through the early afternoon. In addition to damage across portions of Alabama, this storm system produced damage from Eastern Texas to the Atlantic Coast.

MONTGOMERY COUNTY 0.6 E (MGM)MONTGOMERY ARPT [32.30, -86.39]			
11/22/11 16:58 CST	5K	Thunderstorm Wind (EG 40 kt)	
11/22/11 16:58 CST	0	Source: Public	

Very localized damage occurred at Dannelly Field, where a hangar door was pushed in, slightly damaging the aircraft inside. Also, a small aircraft sitting on the tarmac secured by chocks was wind-vaned about 90 degrees.

A line of showers and thunderstorms formed well ahead of an approaching cold front on November 22nd. As the line of storms moved into an unstable airmass in southeast Central Alabama, strong thunderstorms developed, producing an isolated report of wind damage.

11/12/11 10:00 CST	0	Wildfire
11/16/11 15:00 CST	0	

A wildfire began on the 12th near Courtland, Alabama. Windy and dry conditions that day allowed the fire to spread quickly. The fire began near County Roads 284 and 288. The fire came within a half mile of a dozen homes, but none were impacted. The fire was contained by the 15th, and rainfall on the 16th put out the remaining flames. The exact cause is under investigation.

A sign at Johnson High School was blown down at the intersection of Cecil Fain Drive and Winchester Road in northwest Huntsville. Time estimated.

A high shear-low CAPE (instability) environment supported the development of strong to severe thunderstorms during the morning hours across north Alabama. These storms were in advance of a sharp cold front dropping southeast. Ahead of the front, very moist air was flowing northward from the Gulf of Mexico with dew point temperatures climbing into the lower to mid 60s during the overnight hours of the 15th into the morning of the 16th. A broken line (QLCS) of thunderstorms moved rapidly eastward through northern Alabama after sunrise. One of the line segments in this system became strong to severe in Franklin moving into Lawrence County where the first report of damage was received. The storm produced a narrow downburst of damaging winds in northern Madison and northwest Huntsville in Madison County. A 74 mph wind gust was measured at the 911 center in Madison County. Trees and power lines were taken down in a narrow swath across northwest Huntsville.

Jackson and DeKalb Counties with 3 to 5 inches. The rain fell over 24 to 36 hour period, with rainfall remaining light to moderate during most its duration. The rainfall resulted in minor river flooding along the Little River, Big Wills Creek and Paint Rock River. A landslide occurred on Highway 35 just north of Section in Jackson County. A driver was trapped in his vehicle, but was rescued unharmed. Trees, boulders and debris blocked 100 to 250 yards of Highway 35.

An intense upper level low developed on the 28th at the base of a highly amplified upper trough across the Great Lakes and Mississippi Valley. The upper low closed off over the mid South and tracked northeast across the Tennessee Valley during the morning of the 29th. A warm conveyor belt of heavy rainfall developed in advance of the low which dumped from around 2 to over 5 inches of rain across the eastern two thirds of north Alabama and middle Tennessee. The highest rain amounts were recorded in Jackson and DeKalb Counties with 3 to 5 inches. The rain fell over 24 to 36 hour period, with rainfall remaining light to moderate during most its duration. The rainfall resulted in minor river flooding along the Little River, Big Wills Creek and Paint Rock. A landslide occurred on Highway 35 just north of Section in Jackson County. A driver was trapped in his vehicle, but was rescued unharmed. Trees, boulders and debris blocked 100 to 250 yards of Highway 35.

The rain mixed with and changed to snow across north Alabama during the afternoon and evening hours of the 28th, and lasted into the 29th. The heaviest bursts of snow occurred in northwest Alabama during the afternoon and evening hours, and in north central and northeast Alabama during the overnight and morning hours. Since ground temperatures were in the 50s, and air temperatures in valley areas only dropped into the mid 30s, most of the snowfall melted on impact with mostly trace amounts reported in valley locations. However, above 1500 foot elevation, snow accumulations of 1 to 2 inches were reported. The heaviest amount was 2.3 inches on Monte Sano Mountain, about 5 miles northeast of Huntsville.

A tree was blown down at 490 N State Highway 95. Monetary damage was estimated.

An early Fall, seasonably strong upper level mid-latitude trough moved through the area on November 16th. The associated surface low pressure and cold front brought with it a round of thunderstorms, one of which became severe in southeastern Alabama, downing 4 trees in Houston county. A tornado watch was in affect prior to the arrival of thunderstorms. However, no tornadoes were confirmed in the WFO Tallahassee county warning area with this system.
