A tornado touched down just west of Highway 63 in western Tallapoosa County, where it uprooted and snapped scores of trees. It continued northeastward and passed just north of Wind Creek State Park, where it produced significant and widespread tree damage between Highway 128 and the shores of Lake Martin. The tornado caused significant damage to several homes in the Pineywoods Area. It then crossed Lake Martin and came ashore in the River Bend Subdivision, where it snapped or uprooted hundreds more trees. The tornado continued moving to the northeast and crossed Highway 280, just west of Midway, producing minor tree damage. It passed north of Jacksons Gap and passed just south of Eagle Creek, where it widened to over one-quarter mile. It destroyed one double-wide manufactured home and two single-wides. As the storm crossed Alabama 49, it lofted and destroyed a single-wide manufactured home, fatally injuring one individual. The tornado path broadened to approximately 1000 yards as it crossed Elder Road. Farther to the east, approximately 14 homes received mainly roof damage and scores of trees were snapped or uprooted on Buttston Road, just north of Denver Road. The tornado continued into eastern Tallapoosa County, and then moved into Chambers County, where it eventually lifted.

Direct Fatalities: M57MH

Ninor damage occurred to the roof of the Crun vindow was also broken, as well as minor tree		-	vas removed, caus	ing damage to the interior ceilings. One
An upper level disturbance moved out of Tex	xas and began to make its way	into the Mississip	pi Valley region o	n March 29. Showers and
hunderstorms developed out ahead of the f	ront produced one isolated rep	ort of penny sized	I hail. As the uppe	r level disturbance
moved closer to the area on March 30, sever	ral more bouts of rain occurred	across central Al	abama. Due to abr	normally high
temperatures, there was enough instability t	o produce an isolated occurrer	nce of strong wind	is of around 50 mp	oh that caused damage to
a building in the Montgomery area.

A strong shortwave moved across the area during the evening hours on Saturday, March 31, 2012. With moderate instability in place (1500-2500 J/kg) and steep mid level lapse rates due to 500 mb temperatures of -18 degrees C, supercell thunderstorms produced widespread large hail across locations in northwest Central Alabama. Hail larger than golf balls was reported with numerous thunderstorms. In addition, thunderstorms tracked across the same areas, resulting in multiple rounds of large hail for the same locations.

MADISON COUNTY 1.3 SW CLUTTSVILLE [34.82, -86.79], 1.9 SE PLEVNA [34.95, -86.40]				
03/02/12 09:25 CST	0	Tornado (EF3, L: 23.70 mi , W: 250 yd)		
03/02/12 10:00 CST	0	Source: NWS Storm Survey		

A tornado crossed from Limestone into Madison County just north of Orville Smith Road where a single wide modular home lost much of its roof and tree were snapped around it. Major structural damage occurred at the intersection of Yarbrough Road and Old Railroad Bed Road. This was one of the worst hit areas around the Harvest community. Damage to homes, mostly collapsed roofs and some exterior wall damage continued east along Yarbrough Road across Bridges Drive and Bedford Lane, just before Wall Triana Blvd. Also in this area, power poles were snapped near the base. Damage continued across State Highway 53 just south of Jeff Road. The tornado snapped and uprooted trees along Quarter Mountain Road, Carters Gin Road, and Beaver Dam Road just before Pulaski Pike. More significant damage bean to be seen along Patterson Lane, between Mount Lebanon Road and Harwell Lane where wood power poles were snapped, numerous trees uprooted and several homes had roof loss. A large metal barn/shed lost it's roof and some of it's walls were collapsed inward. Damage continued along U.S. Highway 231 at Meridianville Middle School where a concrete power pole was snapped an minor roof damage occurred to nearby buildings.

The tornado then strengthened between Hubert Road and Walker Lane along Mitzi Drive. In this area, EF-2 to low end EF-3 damage was found as several single story homes were destroyed with a loss of all walls. Other homes received significant damage with complete loss of roof and failure of exterior walls. Estimated path width in this area was 200-250 yards. Just northeast of this location along Charley Patterson Road, EF-3 damage occurred as 3 brick veneer/cinder block houses were reduced to rubble. The tornado continued to produce significant damage along Butler Road just south of Walker Lane where additional concrete power pols were snapped and large oak trees were snapped and uprooted. The damage path continued north of New Market, near Hillsboro, with additional trees snapped and uprooted and some roof shingles were lost to some residences. Damage here suggests the tornado was beginning to weaken. Along Davis Road, just south of Moe Road, numerous trees were snapped or uprooted with severe shingle loss to a house about 200 yards away from the road. Beyond this, the tornado appeared to weaken and lift as it moved across the higher plateau region of extreme northeast Madison County.

	03/02/12 10:06 CST		0	Tornado (EF2, L: 7.26 mi , W: 220 yd)
	03/02/12 10:15 CST		0	Source: NWS Storm Survey

A tornado of EF-2 intensity with a peak wind speeds of 130 mph crossed portions of north central into northeast Madison County. The tornado began it's path just south of the Meridianville-Madison County Executive Airport off Meridianville Bottom Road where several trees were snapped. The tornado continued it's path eastward to Buckhorn High School before lifting at a farm across from the school on Winchester Road.

The tornado snapped power poles and lines along Moores Mill Road just north of Darwin Road. The tornado then intensified and destroyed a silo just east of that location before snapping trees and collapsing a barn on Macon Lane. The EF-2 tornado continued east causing significant tree damage and structural loss to residences along Rube Robinson Road and Morning Mist Drive. Most residences experienced roof damage, including loss of shingles and windows blown out. One home on Morning Mist Drive completely collapsed and was torn off it's foundation. The tornado was at it's peak width of about 220 yards at this point, before narrowing to 50 to 100 yards as it re-crossed Rube Robinson Road. The tornado collapsed a roof and barn in this area, then crossed fields for about 1 mile before reaching residents adjacent to Buckhorn High School on Shady Oak Lane ad Maysville Lane. A residence experienced significant damage, with brick walls buckled and a large portion of the roof torn off. A nearby cinder block wall of a garage collapsed.

The tornado then tracked through the Buckhorn High School campus at a width of up to 100 yards. A block building used by the ROTC students adjacent to the stadium collapsed. Several portions of the roof of the high school were torn off. Several cars in the parking lot were moved, twisted, and damaged with some windows blown out. The tornado then crossed Winchester Road and severely damaged a farmhouse, snapped and uprooted trees and strewn debris downwind across an adjacent cotton field where the tornado is believe to have lifted.

JACKSON COUNTY 0.5 NW FRANCISCO [34.98, -86.26], 0.8 NNE FRANCISCO [34.99, -86.24]	l	
03/02/12 10:08 CST	5K	Tornado (EF1, L: 0.77 mi , W: 100 yd)
03/02/12 10:09 CST	0	Source: NWS Storm Survey

A tornado of up to EF-1 intensity produced peak wind speeds of 90 mph. The tornado snapped and uprooted trees just west of Highway 65 near Francisco. The tornado tracked into far southwestern Franklin County in Tennessee for about another quarter of a mile before lifting. This tornado was spawned from the supercell thunderstorm which had produced an EF-3 tornado in east central Limestone into northern Madison Counties earlier in the morning. It is unknown if additional damage occurred with this tornado in the higher terrain of northeast Madison and northwest Jackson Counties as these areas were inaccessible by ground vehicle.

LIMESTONE COUNTY 0.4 SSE SPENCER [34.92, -87.05], 1.2 W ELKMONT [34.93, -87.00]

A tornado of EF-0 intensity with peak wind speeds of 75 mph began a path in farm fields near the intersection of Easter Farm Road and County Road 49/Morris Road. Several tree limbs were snapped in this area along with sporadic uprooting of softwood trees. The tornado then tracked east toward the Elkmont community, mainly along a parallel track just south of Morris Road. The tornado lifted just west of Highway 127.

Hail up to quarter size was reported at	03/31/12 16:39 CST 03/31/12 16:42 CST			
Hail up to quarter size was reported at	03/31/12 16:39 CST 03/31/12 16:42 CST the intersection of New Cut Road and U.			

A swath of wind damage downed numerous trees and power lines, and destroyed one farm outbuilding. The path of damage began on County Road 434 just south of State Highway 24 north of the Five Points community. Here, severe small trees were snapped. Just southeast of this area along County Roads 434 and 324, a farm outbuilding was completely destroyed by peak winds estimated to be 90 mph. Continuing to move south-southwest along a path, several more trees were snapped or uprooted along County Road 87 heading south towards Five Points.

Near the Oakville community, several more small to moderate size trees were snapped along County Road 336. A pocket of winds estimated at 70 to 80 mph impacted a small area along County Road 203 around the Jesse Owens Memorial Park and Museum. At the park, a metal light pole was bent back slightly and a small outhouse was pushed off it's foundation and partially destroyed. Tree branches were snapped around the park and near the museum, but no structural damage occurred to the actual museum.

Heading farther south toward the interchange of State Highways 157 and 36 near Speake, an area of trees were either snapped or uprooted by estimated wind speeds of 75 mph. All the uprooted trees were lying in a south-southwest direction. Outside of a few snapped tree branches along County Road 81 just south of Speake, no additional damage was noted.

Joe Wheeler Electric Membership Corporation reported a power outage that affected at least 831 customers.

Hail to the size of nickels was reported at the Red Bay Police Department.

Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

A very unstable environment along with an approaching weak surface trough dropping through Tennessee ignited several supercell thunderstorms during the mid afternoon through mid evening hours. A couple of the supercell storms tracked from southern and southwester middle Tennessee through northwest and north central Alabama, producing long swaths of large hail, in some cases very large hail up to tennis and softball sized. One of the storms produced a narrow swath of damaging winds across eastern Lawrence County, including the Speake community. The winds destroyed a barn and garage, and knocked several trees and power lines down in this area.
