Phone lines were downed along County Road 45, near Vivula.

into the Muscle Shoals area.

A series of decaying mesoscale convective system boundaries pushed southeastward into Central Alabama on Thursday and Friday, June 27 and 28th. Thunderstorms developed as these outflow boundaries interacted with an unstable airmass characterized by dewpoints in the 70's and CAPE values up to 3000J/kg. These storms produced scattered wind damage across central and south Central Alabama.

Trees and power lines were blown down around Ashford as reported by the public via social media.

Upper level troughing and a weak surface front affected the region for a couple of days at the end of the month. Ample instability contributed to the development of a few severe storms with damaging winds the main threat.
