An upper level trough and associated cold front moved through Alabama during the afternoon on March 5th. Cloud cover during the morning, and an inversion off of the surface, kept the surface based instability low. However, sufficient CAPE in the hail growth zone, and strong upper level support, helped for thunderstorms to develop. The thunderstorms mainly produced small hail, but drier air entraining into some of the thunderstorms led to several damaging wind reports.

Storm Data and Unusual Weather Phenomena - March 2013					
Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details	
Along the northwest shore of Doctor Ja swath of wind damage. A mobile home	, , , ,	Road, approximately f	our dozen trees we	ere uprooted in a short and narrow	

ETOWAH COUNTY 2.2 NNE SARDIS CITY [34.20, -86.11], 3.5 ENE WHITI	ESBORO [34.19	, -86.01]		
03/18/13 14:43 CST		0	Tornado (EF1, L: 5.27 mi , W: 300 yd)	
03/18/13 14:48 CST	3	0	Source: NWS Storm Survey	

The tornado initially touched down in Marshall County in Boaz and moved eastward into Etowah County about a half of a mile west of Oak Drive where it snapped and uprooted several pine trees. From there it moved to the east and crossed Broadwell Road and overturned a tractor trailer and a camper. The tornado continued eastward, snapping and uprooting trees along the path. Several barns and small outbuildings sustained roof damage. As the tornado crossed Chumley Road, two mobile homes were overturned while more trees were uprooted. The most extensive damage occurred as the tornado approached Rowen Road. A mobile home was lifted and overturned leaving one person seriously injured and two others with minor injuries. In this same area, two additional mobile homes were destroyed. As the tornado crossed Brow Road, a one story brick home had one third of its roof removed and wind-blown debris was observed on all four sides of the home. The tornado continued further east for approximately 300 yards before dissipating as it approched Sand Valley Road.

A large portion of a metal roof was removed from a residence along County Road 20.

An upper trough became negatively tilted as it moved into the Mississippi River Valley. A strong cold front trailed southward from the trough and swept through the state. Ahead of this cold front, an intense derecho moved through central Alabama during the afternoon and evening hours of Monday, March 18th. The morning started out cloudy across Alabama, but as dry air aloft filtered into the state from the southwest, the clouds thinned, allowing surface based instability to increase into the 1250-1750 J/kg range ahead of the developing line of thunderstorms. As the line entered the state from Mississippi, it brought with it damaging straight line winds of widespread reports of 60 to 80 mph, including a measured report of 88 mph. These winds resulted in trees and power lines down across the northern two-thirds of central Alabama. Along with the wind from the derecho, up to two inch hail was reported and eventually a tornado spun up in northern Etowah County. Ahead of the derecho, discrete thunderstorms developed as well. It was within these individual storms where some of the largest hail was reported, including baseball sized hail in Chilton County.

On the morning of Saturday, March 23, an upper trough began digging into the center of the country. That evening, within the resultant southwesterly flow aloft that was streaming through the southeastern United States, a surface low began to develop near New Orleans. Because of the lack of any real upper level feature to drag it or the warm front northward, the surface low never really amounted to much. North of the warm front, which was draped across the Gulf Coast, elevated storms began to develop. Steep mid-level lapse rates (evident in the 12z/March 23 BMX and 00z/March 24 JAN upper air soundings below), along with sufficient hail growth zone CAPE values of 1000-1500 J/kg and 0-3km Storm Relative Helicity values of 400-600 m^2/s^2, these elevated storm became well-organized. Starting in south-central Mississippi and moving into central Alabama, one of these storms traversed Sumter, Hale, Perry, Bibb, Chilton, Coosa and Tallapoosa Counties, dropped hail stones of 1 to 1.75 inches in diameter and created damaging wind gusts.

Wind damage began near Interstate 65 at exit 304, where multiple trees were uprooted and snapped, highway signs were broken over, and business windows were broken in. Roof and sign damage occurred to several businesses along Alabama Highway 69 and several side roads. The most significant damage occurred to a cinder-block warehouse, where an exterior wall collapsed. An overhead door was buckled and the roof collapsed.

The Municipal Utilities Board reported that a hard hit section of the city of Albertville was at Alabama Highway 205 and Rabbittown Road where many trees and power lines were knocked down. A tree fell into a house on Lexington Street. Power poles were snapped on Edmundson Street between Solitude Road and Highway 205. The Albertville Recreation Center sustained extensive damage where a scoreboard was blown down on a baseball field and a dugout roof was ripped off. Fencing was damaged and trees were blown down on the walking track.

Several mobile d minor to moderate exterior damage in of 125 mph). The tornado continued to . Metal from the roof that was damaged suffered minor roof damage. A semi s. The tornado continued to parallel

A tornado touched down along County Road 539 north of County Road 50 in the Fyffe and Shiloh communities. Minor tree damage was noted in this area. An unoccupied chicken house also sustained damage. Near the intersection of County Roads 50 and 43, a restaurant sustained roof damage and a carport was flattened. Further east, another large farm building sustained major damage. Along Highway 50, additional chicken houses were damaged or destroyed along with trees snapped and uprooted.

The most significant damage occurred along Traylor Street just north of Highway 50/Grove Oak Road. Two large, well constructed, farm buildings were completely destroyed. One of these contained metal trusses and the posts were ripped out of the ground. Debris was thrown several hundred yards and large debris was embedded into the ground. A nearby home sustained minor structural damage. The path widened to 350 yards with estimated maximum wind speeds of 120 mph. The tornado began to narrow and weaken as it moved further east as it crossed County Roads 523 and 578. The tornado lifted near County road 72/Tumlin Road north of Highway 75.

A severe thunderstorm produced extensive wind damage on the north side of Fort Payne. Along 45th Street, adjacent to the high school, an entire row of wooden power poles were snapped. The athletic facilities at the high school sustained damage to fencing, signage and roofing, including a light pole being blown down at the high school stadium and a large projector screen blown away by the thunderstorm winds. Just to the east of the school, the Heil Environmental manufacturing facility sustained significant roof and interior water damage, with one injury noted. A metal building had a complete wall collapse and extensive roof damage and a local business suffered extensive damage and another minor injury. The surrounding area also had numerous trees snapped or uprooted, including multiple trees downed at the Fort Payne Times-Journal newspaper building on Greenhill Boulevard in Fort Payne, Alabama. Several trees were downed by thunderstorm winds at the Fort Payne City Park and at the DeSoto Golf Course. Further extensive wind damage occurred in the DeSoto State Park on Blalock Drive, where numerous trees were snapped and downed by thunderstorm winds. This resulted in the closing of the DeSoto State Park lodge and restaurant for seven days due to numerous trees and power lines being downed in vicinity of the lodge and restaurant. Damage in this area was consistent with winds of 90 to 105 mph.

An active severe weather episode was produced by two quasi-linear convective systems. The first developed during the midday hours across middle Tennessee into northwest Alabama, while another which originated as a small convective cluster in central Arkansas rapidly intensified and raced eastward through northern Mississippi into north Alabama during the afternoon hours. Numerous reports of wind damage, large hail and four tornadoes. Two of the tornadoes injured ten people and produced significant damage to mobile homes, trees, and power poles.
