| | 02/21/14 00:31 CST | 1 | 0 | Source: NWS Storm Survey |

A brief but strong tornado with wind speeds up to 125 mph touched down at the Jet Polymer Plant off of Gault Avenue about 4 miles north-northeast of the town of Fort Payne in central DeKalb County. The tornado flipped 3 large tractor trailers, one of which was vaulted into the air, landing on top of the plant's roof. Adjacent to the plant, across a parking lot, a medium sized metal building structure had much of its metal siding removed and roof uplifted. Also, the column anchorage was severely bent and failed. The tornado continued its track northeast, snapping and uprooting medium to large trees.

Beyond this point, the tornado appeared to skip along its track (little to no damage seen), before doing significant structural damage to several homes along Green Valley Circle. One person experienced minor injuries (lacerations) at one of the homes in this location. Two single-family well constructed residences sustained a complete loss of roof material and a collapse of at least two exterior walls (mainly around the garage areas). Numerous trees surrounding the properties were snapped or uprooted. In addition, one small and one medium sized shed were completely destroyed. This area appeared to be where the tornado was at its strongest (Peak Winds: 125 mph/EF-2 rating). Other nearby homes in the neighborhood along Green Valley Circle sustained mainly loss of roof shingles, siding panels, and broken windows.

Just up the hill from this location, a small apartment complex was hit. Partial uplift of the roof occurred at this location. Also nearby, a small apartment complex was hit, where partial uplift of the roof, loss of siding, and broken windows were seen at this two story apartment complex. Other smaller buildings had just minor roof damage, with small trees snapped off, and small branches broken off of trees. The tornado continued northeast along its short track and appeared to quickly weaken and eventually lift near the intersection of 55th Street and Martin Avenue, but not before causing partial roof loss to a home. At this location, plastic fencing around a pool was knocked out and several trees were snapped about halfway down. Debris was also noticed littering the area, seemingly deposited by the tornado as it diminished.

A quasi-linear convective system rolled across the region during the evening and overnight hours of the 20th into the 21st producing eight tornadoes in north Alabama and southern middle Tennessee and numerous reports of wind damage.

Large trees were blown down in the 5500 Block of Hodgesville Road with some cars crushed under car ports. Power lines were also blown down. Monetary damage was estimated.

Steep mid-level lapse rates and an upper level trough moving through combined to produce isolated severe weather across the tri-state area with one report of severe weather in southeast Alabama.
