Four pine trees were knocked down near the campus of the University of Northern Alabama.

A few pulse thunderstorms developed during the afternoon and evening hours. One storm knocked four pine trees down on the campus of the University of Northern Alabama in Florence.

MORGAN COUNTY --- 1.0 NNW PRICEVILLE [34.38, -86.89]

05/30/14 15:08 CST 1K Lightning

05/30/14 15:08 CST 0 Source: County Official

Lightning knocked a very large tree limb down onto a home on east upper river road in the Sandy Acres subdivision, near Priceville, Alabama. Winds around 35 mph also damaged a trampoline.

A strong thunderstorm developed in north central Alabama, producing lightning that did some damage to a house after a large tree limb (after being struck by the lightning) fell on it.

#### ALABAMA, Southeast

GENEVA COUNTY --- 5.8 E BLACK [31.00, -85.64], 5.0 WSW FADETTE [31.01, -85.61]

05/10/14 14:07 CST 85K Tornado (EF1, L: 2.15 mi , W: 100 yd) 05/10/14 14:16 CST 0 Source: NWS Storm Survey

Damage began just west of Geneva County Highway 9 near the intersection with Thelma Road. The beginning of the damage path appeared to be about 250 yards west of Highway 9 where some light tree damage was noted. More substantial tree damage was noted closer to Highway 9 and along Thelma Road, with numerous snapped or uprooted trees. In addition there was damage to two houses. One had some minor damage to some of the siding and gutters. The other had uplift of some sections of the roof from both the house and a nearby shed. Damage at this location was consistent with estimated peak 3-second wind gusts of around 100 mph based on the Enhanced Fujita Scale. Some sporadic tree damage was noted to the northeast of Thelma Road near some farm fields, and it seems likely that the tornado was then in occasional contact with the ground for a little over a mile with only some light tree damage noted. A small corridor of more significant damage was noted again just west of Price Road and about 0.3 miles north of Geneva County Highway 4. At that location, a metal building structure being used as a barn was destroyed. The metal beams that supported the structure were embedded at the corners of the building in about a foot of concrete in the ground. These beams and the associated concrete were pulled out of the ground. Nearby damage consisted of some sporadic instances of trees and poles being snapped, as well as a small shed being destroyed. Given the likelihood that the wind entered the larger metal structure relatively unimpeded, and a lack of more significant nearby damage, it's likely that this structure failed at a slightly lower wind speed with estimated peak 3-second wind gusts of around 105 mph. The last damage was noted in a patch of trees just northeast of the metal structure that was destroyed.

GENEVA COUNTY --- 2.0 S SAMSON [31.08, -86.04]

05/12/14 13:27 CST 0 Source: Public

The public submitted a picture on social media of a large tree down 2 miles south of Samson on Highway 87.
