poles were snapped along with a 10	ed to the east-northeast between 10th Stree D by 10 foot shed partially destroyed. Just of along the path of this wind maxima	-	-	- · · · · · · · · · · · · · · · · · · ·

was the final piece of damage seen along the path of this wind maxima.

A squall line moved east through the region during the pre-dawn hours. As the squall line entered northwest Alabama, it produced a swath of damaging winds in the community of Red Bay in Franklin County. As the line proceeded east and weakened, a new line formed in central and north central Alabama. This line produced a brief EF-0 tornado in the town of Madison in Madison County and an EF-1 tornado in the Asbury community of Marshall County.

A tornado initially touched down in downtown Tuscumbia, near the intersection of 6th Street and Main Street, where two roofs were businesses. The brick facade of a small retail building was torn off across 5th Street, and it's roof was partially torn off and roofing r	•	·				•

historic home causing injury to the resident. In this residential area, multiple trees were snapped and uprooted or had large limbs broken off. Several power poles were snapped. Many more old trees were snapped an uprooted across the road along Commons Street between Mulberry and Hickory Streets.

At this point, the tornado appeared to weaken somewhat as it crossed a large corn field between Commons Street and King Avenue . It snapped branches upon reaching King Avenue and toppled Bradford pear trees on the grounds of Shoals Hospital along Billy Bowling Drive . As the tornado moved across Grand, Pasadena, and Ford Avenues and Ford Street in Muscle Shoals, it did significant damage to multiple trees throughout the neighborhood. Very minor damage was noted to a couple of houses, but nearly all damage was to trees or power poles.

The tornado intensified as it crossed Ford Street and moved into a commercial district along Woodward Avenue near 2nd Street. There was widespread structural damage to businesses and a church in this area. Numerous awnings were damaged or destroyed, roofs were partly torn off of strip malls, a few windows were broken, and several large signs along the road were blown down. Roofing was peeled off of a used car dealership and gas station and vaulted across the street into a wooded area and another nearby gas station. Power poles were snapped, and two metal power poles were bent, damaging the traffic lights at the intersection. The tornado continued across 2nd Street onto the Tennessee Valley Authority Reservation, where it snapped multiple trees along Garage Road. The tornado lifted before reaching Reservation Road, and little to no damage was noted thereafter. Minor straight-line wind damage was observed farther northeast, near Grandview Drive near the Tennessee River, but this was not associated with the tornado.

 Flash Flood (due to Heavy Rain)

 10/14/14 03:00 CST
 0
 Source: Emergency Manager

Flash flooding occurred with around 12 inches of water over the road from near the bridge on Airport road on Alabama highway 35 in Fort Payne, Alabama, between the hospital and Interstate 59 from a tributary to Big Wills Creek.

A strong cold front swept across the region late on the 13th into the 14th across Ohio, Mississippi and Tennessee Valleys and interacted with a moist and unstable air mass. This led to two waves of severe thunderstorms for northern Alabama. During the early evening hours, one cluster of thunderstorms raced northward from central Alabama at speeds of 50 to 60 mph, and produced areas of significant wind damage, snapping power poles, and large trees. A couple of discrete supercells developed in northeast Mississippi ahead of a squall line and tracked across northwest Alabama. This was followed by the squall line which slowly migrated across the area producing one EF-1 tornado in Colbert County. Sporadic wind damage, and heavy rainfall accompanied this secondary wave which also led to isolated flash flooding.
