Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
ALABAMA, Central				
JEFFERSON COUNTY --- 0.9 NW MC CALLA [33.34, -87.03]				
	03/01/16 17:42 CST		0	Hail (1.75 in)
	03/01/16 17:43 CST		0	Source: Amateur Radio
JEFFERSON COUNTY --- 1.4 ESE MC CALLA [33.33, -87.00], 1.1 E BESSEMER ARPT [33.32, -86.90]				
	03/01/16 17:43 CST		0	Tornado (EF2, L: 5.59 mi , W: 465 yd)
	03/01/16 17:50 CST	4	0	Source: NWS Storm Survey
<p>National Weather Service meteorologists surveyed damage in Western Jefferson County just east of McCalla and south of Bessemer and determined that the damage was consistent with an EF-2 tornado. Maximum winds were estimated to be around 120-125 mph. The tornado touched down just east of McAdory High School on the west side of Overlook Circle with some damage to a roof. There were 12 homes and 1 church that suffered minor damage up to this point as the tornado proceeded east crossing Harper's Dairy Loop. From here it strengthened to an EF-2 as it crossed the Bent Brook neighborhood where it destroyed 6 homes and caused significant damage to 6 other homes. The pro shop at Bent Brook Golf Course also sustained minor damage along with a vehicle overturned. The tornado weakened to an EF-1 as it moved east of the golf course and caused minor damage to 2 more homes and destroyed a free standing garage. The tornado finally lifted just east of Morgan Road on Rice Circle. In total, 14 homes sustained minor damage, 6 sustained substantial damage, and 6 homes were destroyed. An additional 3 buildings sustained damage, along with several hundred trees snapped or uprooted along the path.</p>				
SHELBY COUNTY --- 0.9 SE HELENA [33.29, -86.84]				
	03/01/16 17:52 CST		0	Thunderstorm Wind (EG 50 kt)
	03/01/16 17:53 CST		0	Source: Law Enforcement
<p>Several trees uprooted near Helena City Hall.</p>				
TALLADEGA COUNTY --- 2.6 SSE GANTT JCT [33.12, -86.22], 4.8 ESE GANTT JCT [33.12, -86.17]				
	03/01/16 18:42 CST		0	Tornado (EF0, L: 2.99 mi , W: 80 yd)
	03/01/16 18:45 CST		0	Source: NWS Storm Survey
<p>National Weather Service meteorologists surveyed damage in extreme southeastern Talladega County just southeast of Sylacauga and determined that the damage was consistent with an EF-0 tornado. Maximum winds were estimated to be around 80 mph.</p> <p>The tornado touched down along Settlement Road just west of Old Rockhouse Road. A few homes sustained shingle damage, and one outbuilding was destroyed, along with several uprooted trees at this location. The tornado continued northeast and knocked down trees and damaged several additional homes near Cherry and Heflin Lanes. The tornado turned to the east and tracked parallel to County Road 511. The most concentrated damaged occurred in the valley just west of the community of Overbrook, where numerous trees were snapped or uprooted. The tornado continued eastward and produced minor tree damage and lifted along County Road 511, just before the Clay County line. Six homes suffered damage and four outbuildings were damaged or destroyed.</p>				
LEE COUNTY --- 1.8 WNW ROANOKE JCT [32.68, -85.41], 1.6 ENE ROANOKE JCT [32.68, -85.35]				
	03/01/16 20:27 CST		0	Tornado (EF0, L: 3.08 mi , W: 100 yd)
	03/01/16 20:31 CST		0	Source: NWS Storm Survey
<p>National Weather Service meteorologists surveyed damage in north central Lee County just north of the city of Opelika and determined that the damage was consistent with an EF-0 tornado. Maximum winds were estimated to be around 70-75 mph.</p> <p>The tornado touched down just north of downtown Opelika, west of Oak Bowery Road where numerous trees were uprooted. The tornado traveled east-southeast crossing Morris Avenue where additional small pine trees were uprooted. Farther to the east, the tornado crossed U.S. 431 and Industrial Blvd. where minimal damage was observed. The tornado lifted near the Opelika Sports Complex on Andrews Road where several more soft and hardwood trees were snapped and uprooted. Along the path, 20 to 30 trees sustained damage. However, little to no structure damage was observed.</p> <p>A highly amplified upper-level trough approached the central Gulf Coast Region during the afternoon hours. A deepening surface low over the Ohio Valley Region pushed a strong cold southeast towards Alabama. By the middle of the afternoon, deep layer shear had increased to 60 knots with 0-3 km storm-relative helicity values between 200 and 300 m2/s2. Destabilization and shear profiles favored severe thunderstorms, including tornadoes and large hail.</p>				
PIKE COUNTY --- 1.8 SE GOSHEN [31.70, -86.10]				
	03/03/16 17:30 CST		0	Hail (1.75 in)

Large hail reported at Scotts Farm Supply Store.				
<p>A QLCS moved rapidly eastward across south Alabama during afternoon hours of March 24. The system produced large hail near the northern apex of the bow and high winds were reported on the back side of the system due to a wake low.</p>				
PICKENS COUNTY --- 2.1 WNW STAFFORD [33.46, -88.28], 2.5 NNW STAFFORD [33.48, -88.26]				
	03/31/16 17:32 CST		0	Tornado (EF1, L: 2.08 mi , W: 500 yd)
	03/31/16 17:37 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in northwest Pickens County near Stafford and determined that the damage was consistent with an EF-1 tornado. Maximum winds were estimated to be around 100 mph.				
The tornado started in Mississippi and crossed the state line into Pickens County about 2.3 miles south of Highway 82. The tornado tracked northeast and crossed Eagle Road and County Road 30 before dissipating just north of Highway 82. The damage along the path consisted mainly of snapped and uprooted trees. There was some minor damage to a mobile home as the tornado approached County Road 30.				
PICKENS COUNTY --- 3.8 NNE ETHELSVILLE [33.47, -88.19], 5.5 NNW MELROSE [33.48, -88.14]				
	03/31/16 17:43 CST		0	Tornado (EF1, L: 2.88 mi , W: 350 yd)

Storm Data and Unusual Weather Phenomena - March 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
National Weather Service meteorologists surveyed damage in northwest Pickens County just north of Ethelsville and determined that the damage was consistent with an EF-1 tornado. Maximum winds were estimated to be around 95 mph.				
The tornado touched down near County Road 75 just south of Highway 34. Numerous trees were snapped and uprooted along County Road 75, and there was some minor roof and siding damage to a single residence. The tornado tracked east-northeast in an area that was not accessible by vehicle. The next damage area was along Mineral-Springs Church Road just south of Highway 34, where numerous trees were uprooted and snapped. The tornado continued eastward along Highway 34 and produced loss of shingles to a home and destroyed several outbuildings. The tornado crossed Shockley Road and produced considerable damage to a metal roof of a wood framed home and damage to several outbuildings. The tornado lifted just east of this damage.				
MARENGO COUNTY --- 1.9 WSW LASCA [32.01, -87.98]				
	03/31/16 17:44 CST		0	Hail (1.00 in)

Numerous trees uprooted and a tree on a home along Highway 96 in the city of Millport.				
ETOWAH COUNTY --- 90.5 W ALTOONA [33.78, -87.87], 88.2 W ALTOONA [33.82, -87.84]				
	03/31/16 18:03 CST		0	Tornado (EF1, L: 3.72 mi , W: 650 yd)
	03/31/16 18:13 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in northwest Fayette County near Bluff and determined that the damage was consistent with an EF-1 tornado. Maximum winds were estimated to be around 105 mph.				
The tornado touched down near the intersection of County Road 51 and Turner Road. The tornado traveled northward along County Road 51 for about one mile uprooting and snapping trees, and then it damaged several wood frame barns and outbuildings. The tornado appeared to weaken and only produced minor tree damage as it crossed Turkey Creek and Kirkland Road. It continued north-northeast producing mainly tree damage before dissipating along County Road 21, about one-half mile south of County Road 42.				
LAMAR COUNTY --- 0.6 W KENNEDY [33.58, -87.99]				
	03/31/16 18:04 CST		0	Hail (1.25 in)
	03/31/16 18:05 CST		0	Source: Amateur Radio
Half Dollar size hail reported in the town of Kennedy.				
FAYETTE COUNTY --- 3.5 S BELK [33.60, -87.93]				
	03/31/16 18:06 CST		0	Hail (1.00 in)

FAYETTE COUNTY --- 3.0 S BAZEMORE [33.86, -87.70], 2.7 ESE BAZEMORE [33.89, -87.65]				
	03/31/16 18:27 CST		0	Tornado (EF1, L: 3.70 mi , W: 500 yd)
	03/31/16 18:35 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in northeast Fayette County just northeast of Hubbertville and determined that the damage was consistent with an EF-1 tornado. Maximum winds were estimated to be around 90 mph. The tornado touched down near the intersection of County Road 52 and County Road 18. The tornado tracked northeast and uprooted and snapped numerous trees as it crossed County Road 24. From there, it continued northeast along and just north of County Road 24 and produced tree damage before dissipating at Castleberry Road.				
WALKER COUNTY --- 0.9 SW NAUVOO [33.99, -87.49]				
	03/31/16 18:51 CST		0	Thunderstorm Wind (EG 50 kt)
	03/31/16 18:52 CST		0	Source: Emergency Manager
Trees uprooted and power lined downed near the town of Nauvoo.				

Storm Data and Unusual Weather Phenomena - March 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
FAYETTE COUNTY --- 1.3 S ALTA [33.65, -87.53], 1.8 ESE ALTA [33.66, -87.50]				
	03/31/16 19:05 CST		0	Tornado (EF0, L: 1.88 mi , W: 400 yd)
	03/31/16 19:09 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in southeast Fayette County near Boley Springs and determined that the damage was consistent with an EF-0 tornado. Maximum winds were estimated to be around 70 mph. The short-lived tornado touched down near County Road 46 at the town of Boley Springs. The weak tornado tracked northeast and uprooted numerous trees along its path as it Crossed County Road 83. The roads were blocked by fallen trees at this point and the track could not be followed any farther.				
TUSCALOOSA COUNTY --- 1.5 NNW NORTHPORT [33.24, -87.59]				
	03/31/16 19:35 CST		0	Hail (1.25 in)
	03/31/16 19:36 CST		0	Source: Social Media
WALKER COUNTY --- 1.4 S JASPER WALKER CO ARP [33.85, -87.27]				
	03/31/16 19:35 CST		0	Hail (1.00 in)
	03/31/16 19:36 CST		0	Source: Amateur Radio
Quarter size hail reported in the city of Jasper.				
BLOUNT COUNTY --- 1.5 E ADVILLE [33.88, -86.62], 1.4 S LOCUST FORK [33.88, -86.62]				
	03/31/16 20:42 CST		0	Tornado (EF1, L: 0.32 mi , W: 275 yd)
	03/31/16 20:44 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in southern Blount County just south of Locust Fork and determined that the damage was consistent with an EF-1 tornado. Maximum winds were estimated to be around 90 mph. The tornado was very briefly on the ground near the intersection of Spunky Hollow Road and Sunrise Lane just south of Locust Fork. A metal storage barn with wood framing was heavily damaged and the intact roof was lofted nearly 50 yards. Additionally, a dozen softwood trees were uprooted and/or snapped in this area of damage. A brick home sustained only minor roof damage. Another home in the path sustained minor roof damage and a small pontoon boat was lofted into the side of the home. On the left edge of the path, a single family home suffered the loss of some roofing materials and windows broken by debris . Another dozen softwoods were uprooted and/or snapped with several hardwoods also uprooted. The tornado lifted just northeast of Sunrise Lane.				
ELMORE COUNTY --- 1.8 E KENT [32.62, -85.92]				
	03/31/16 20:48 CST		0	Thunderstorm Wind (EG 50 kt)
	03/31/16 20:49 CST		0	Source: Emergency Manager
Power lines downed along Channa Creek Road.				
AUTAUGA COUNTY --- 1.8 SW FORESTER [32.41, -86.64], 2.9 S FAYS [32.44, -86.41], 0.7 NE FAYS [32.49, -86.41], 2.5 NNW AUTAUGAVILLE [32.46, -86.68]				
	03/31/16 22:00 CST		0	Flash Flood (due to Heavy Rain)
	03/31/16 23:59 CST		0	Source: Emergency Manager
Numerous roads underwater and closed due to high water between the cities of Autaugaville and Prattville . Approximately 60 Autaugaville residents trapped due to flash flooding that washed out portions of Strickland Landing Road.				
ELMORE COUNTY --- 3.8 SW MILLBROOK [32.44, -86.41], 2.5 WNW MILLBROOK [32.49, -86.41], 0.7 ENE ROBINSON SPGS [32.52, -86.37], 0.9 SSW PRATTVILLE JCT [32.46, -86.36]				
	03/31/16 22:30 CST		0	Flash Flood (due to Heavy Rain)
	03/31/16 23:59 CST		0	Source: Emergency Manager
Heavy rainfall over a several hour period, produced flash flooding over southwest Elmore county. Portions of State Highway 143 between Duncan Road and Highway 14 underwater and closed.				
LEE COUNTY --- 1.2 ENE MITCHELL XRD [32.53, -85.38], 3.1 N WHATLEY XRD [32.54, -85.34]				
	03/31/16 23:19 CST		0	Tornado (EF0, L: 2.09 mi , W: 50 yd)
	03/31/16 23:23 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in south central Lee County near Beauregard and determined that the damage was consistent with an EF-0 tornado. Maximum winds were estimated to be around 70 mph. The tornado began near the intersection of State Road 51 and Lee Rd 47, where several pine trees were snapped and uprooted in a convergent pattern. One half mile to the east-northeast, the tornado caused shingle damage to a house along Lee Rd 114. The tornado continued for an additional 1.5 miles and caused minor tree and shingle damage before dissipating near the intersection of Lee Rd 400 and Lee Rd 166.				

Storm Data and Unusual Weather Phenomena - March 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A very warm and unstable developed over west Alabama by the late afternoon on March 31st. Surface air temperatures warmed into the upper 70s with surface dewpoints in the upper 60s. Thunderstorms developed rapidly over Mississippi and spread into Alabama during the evening hours. 0-6 km Bulk Shear values increased to between 50 and 60 knots and the storms quickly became severe, including tornadoes.

ALABAMA, North

LAUDERDALE COUNTY --- 1.0 WNW FLORENCE [34.81, -87.69]

03/01/16 11:55 CST	0	Thunderstorm Wind (EG 52 kt)
03/01/16 11:56 CST	0	Source: Law Enforcement

A few trees were downed by thunderstorm winds.

A strong cold front moved southeast through the Tennessee valley region on March 1st, with a severe storm forming and producing isolated wind damage in northwest Alabama.

(AL-Z006) MADISON

03/14/16 10:30 CST	1M	Strong Wind (MAX 43 kt)
03/14/16 10:32 CST	0	

A relatively weak area of showers with a couple embedded thunderstorms shifted through the southern half of Madison County during the late morning hours of 3/14. After a radar analysis, a particular area of the complex of showers/storms had a transient moment of potential super cell characteristics. While there was some minor damage reported during this brief period, a NWS official storm survey revealed damage was associated with sub-severe winds of approx. 50 MPH.

Storm Data and Unusual Weather Phenomena - March 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Large tree downed by sub-severe winds. The storm survey team reported a weak and degraded root system which led to the tree being knocked down.

LAWRENCE COUNTY --- 2.0 S MOULTON [34.45, -87.28]

	03/31/16 19:50 CST	0	Hail (1.00 in)

	03/31/16 19:59 CST	0	Hail (1.00 in)
	03/31/16 19:59 CST	0	Source: Broadcast Media

Quarter size hail was reported.

MORGAN COUNTY --- 2.6 N HARTSELLE [34.47, -86.93], 2.0 W BLUFF CITY [34.55, -86.81]

	03/31/16 20:54 CST	0	Tornado (EF2, L: 9.32 mi , W: 200 yd)
	03/31/16 21:12 CST	0	Source: NWS Storm Survey

The tornado touched down just southwest of the intersection of Indian Hill Road Northeast and Roberts Catfish Lane in Hartselle. Multiple hardwood trees were snapped at the beginning of the tornado track. From there, the tornado damaged several mobile homes on Roberts Catfish Lane. One of the mobile homes rolled 45-50 yards to the northeast after snapping all 6 of the tie-downs that anchored the home. The unit was mostly destroyed with the frame of the structure still largely intact. The second mobile home at this location separated from its porch and was shifted off its foundation about 10 feet. A wooden tin carport structure housing lawn and farm equipment was partially destroyed, with pieces of the wood embedded in the ground around the mobile homes. A small sedan parked at the second mobile home was lifted and had the front end embedded briefly in the ground, tearing off the front bumper, which was found 10 feet away. debris from these buildings was found half a mile to the northeast from this location at the next area of damage surveyed. Path width at this location was about 50 yards.

About half a mile northeast, just west of interstate 65 on Bethel Circle Northeast, widespread tree damage was surveyed. Large hardwood trees about 2 feet in diameter were found snapped, sheared and twisted off about 10-15 feet from their bases. Multiple trees had the bark twisted off and strewn about the forest. Of the few homes that were within the tree damage area, only minor damage was noted to a couple of the houses. Most of this damage was from siding being blown off or from trees directly clipping the edge of a roof as they fell. The vast majority of the tree damage at this location was on property along Village Branch Cree behind the homes. Path width at this location was about 200 yards.

The tornado appeared to lift briefly before setting down again along Bethel Road near the intersection with Spring Valley Road, just east of Interstate 65. Several trees were uprooted at the Walnut Grove Baptist Church, and several gravestones were pushed over or broken. Numerous pine trees were snapped in a clear, coherent path as the tornado continued to the northeast.

Tree damage became more consistent and widespread along Shoal Creek Road and White Oak Drive. Hundreds of softwood and hardwood trees were snapped and uprooted in this general area, and there was some minor structural damage to a few single family homes. The tree damage was more widespread as the tornado moved into the Autumn Wood Trail area. Trees fell onto a single family home and damaged it.

The most significant structural damage occurred near the intersection of Thompson Lane and Peach Orchard Road. IN this area, multiple sheds were completely destroyed and most of the shingles on the roof of a single family home were torna off. Once again, numerous pine trees were snapped. The tornado appeared to weaken slightly as it moved towards Uper River Road. There was some modest tree damage in a field east of Thomson Lane, and many of the shingles on the roof of a single family home were damaged or removed.

The tornado continued northeast to Turkey Mountain, Road, where it snapped several more trees and pushed a double-wide mobile home off its piers and damage the roof. Based on damage viewed from Turkey Mountain Road, it is believed that the tornado continued to near the Tennessee River.

LIMESTONE COUNTY --- 2.0 SSE NEW HOPE [34.55, -86.81], 2.0 SSE NEW HOPE [34.56, -86.80]

	03/31/16 21:12 CST	0	Tornado (EF0, L: 0.23 mi , W: 160 yd)
	03/31/16 21:14 CST	0	Source: NWS Storm Survey

Storm Data and Unusual Weather Phenomena - March 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

There was enough evidence to suggest that the tornado continued through northern Morgan County and crossed the Tennessee River into extreme SE Limestone County. A supplemental survey completed by the University Alabama Huntsville determined that the tornado did cross the river during its dissipation stage, and produced minor tree damage along the river bank in Limestone County. The damage associated with the weakening tornado was comparable to weak EF-0 damage. There was minor damage recorded slightly further downstream, however that damage did not meet EF-0 criteria. Therefore, the official tornado tracked was ceased at the river bank on the Limestone County side .

Supercell and multi-cell cluster thunderstorms affected much of the Tennessee Valley in advance of a strong cold front during the late afternoon and evening hours of the 31st. One of the cells produced an EF-2 tornado in Morgan County and extreme southeastern Limestone County.

ALABAMA, Southeast

DALE COUNTY --- OZARK [31.44, -85.64]

	03/03/16 18:25 CST	0	Thunderstorm Wind (EG 50 kt)
	03/03/16 18:25 CST	0	Source: 911 Call Center

Trees were blown down in the Ozark area.

A squall line swept across portions of the tri-state area during the evening hours of March 3rd with some reports of damaging wind gusts, mainly in the form of trees and power lines blowing down.

DALE COUNTY --- DALEVILLE [31.28, -85.72]

	03/17/16 14:00 CST	0	Hail (1.75 in)
