Several reports of trees uprooted and power lines downed in the city of Auburn.

LEE COUNTY --- SMITHS STATION [32.53, -85.08]

	06/15/17 17:20 CST		0	Thunderstorm Wind (EG 50 kt)
	06/15/17 17:22 CST		0	Source: Public

Several reports of uprooted trees in the Smiths Station community.

Thunderstorms developed along a large and progressive outflow boundary that tracked southeast across all of central Alabama during the afternoon and early evening hours. The thunderstorms produced widespread wind damage.

AUTAUGA COUNTY --- 1.4 WSW AUTAUGAVILLE [32.42, -86.69], 2.3 W WHITE CITY [32.65, -86.66], 2.4 ENE PINE FLAT [32.66, -86.41], 3.3 SSE PRATTMONT [32.43, -86.42]

	06/18/17 04:45 CST		0	Flash Flood (due to Heavy Rain)
	06/18/17 10:15 CST		0	Source: Emergency Manager

Heavy rainfall during the early morning hours produced rainfall amounts of 3-5 inches in a time span of two to three hours. Widespread flooding was reported over the eastern half of Autauga County. Up to four feet of water was reported at the intersection of Highway 82 and County Road 21. Flooding washed out portions of Manning Road. Vehicle with occupants became trapped by the rising water on County Road 59.

ELMORE COUNTY --- 4.3 SW MILLBROOK [32.43, -86.41], 4.6 SSW MILLBROOK [32.42, -86.41], 4.1 SSW MILLBROOK [32.43, -86.40], 4.0 SSW MILLBROOK [32.43, -86.40]

	06/18/17 06:00 CST		0	Flash Flood (due to Heavy Rain)
	06/18/17 09:00 CST		0	Source: Emergency Manager

Cooter Pond Road flooded due to Pine Creek overflowing its banks and the adjacent Mobile Home Park also flooded.

Storm Data and Unusual Weather Phenomena - June 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
MONTGOMERY COUNTY --- 1.0 W MONTGOMERY [32.38, -86.32], 2.1 SSW MONTGOMERY [32.35, -86.32], 2.6 SE MONTGOMERY [32.35, -86.27], 0.5 SSE CAPITAL HGTS [32.39, -86.28]				
	06/18/17 07:00 CST		0	Flash Flood (due to Heavy Rain)
	06/18/17 10:00 CST		0	Source: Broadcast Media

Several reports of flooded roads in the city of Montgomery.

MONTGOMERY COUNTY --- 1.2 E (MXF)MAXWELL AFB MNT [32.38, -86.33], 2.0 SSE (MXF)MAXWELL AFB MNT [32.35, -86.33], 2.1 SSW MONTGOMERY [32.35, -86.32], 1.0 W MONTGOMERY [32.38, -86.32]				
	06/18/17 07:00 CST		0	Flash Flood (due to Heavy Rain)
	06/18/17 10:00 CST		0	Source: Broadcast Media

Several reports of flooded streets in the western portions of the city of Montgomery.

Thunderstorms developed during the early morning hours of June 18th across portions of south central Alabama. The convection formed along a upper trough axis that stretched from Mobile, Alabama, northeastward into northwest Georgia. The storms were slow moving due to light upper level winds near the trough axis.

LOWNDES COUNTY --- 2.9 E LOWNDESBORO [32.28, -86.57], 3.4 ENE HAYNEVILLE [32.20, -86.54], 2.6 N TYSON [32.22, -86.46], 2.1 SSE MANACK [32.30, -86.48]				
	06/22/17 04:00 CST		0	Flash Flood (due to Heavy Rain)
	06/22/17 07:00 CST		0	Source: Department of Highways

Several roads flooded in northeast Lowndes County between the cities of Lowndesboro and Hayneville.

JEFFERSON COUNTY --- 0.6 ESE RED ORE [33.43, -86.94], 1.0 W THOMAS JCT [33.53, -86.87]				
	06/22/17 11:21 CST		0	Tornado (EF1, L: 8.29 mi , W: 255 yd)
	06/22/17 11:38 CST	4	0	Source: NWS Storm Survey

NWS Meteorologists surveyed damage in western Jefferson County and found that the damage was consistent with an EF 1 tornado, with maximum sustained winds near 110 mph. There were three separate notable increases in damage severity and/or density, likely indicating that the funnel had a skipping/cycling characteristic as it swayed from less to more intense.

The tornado touched down along 5th Street North, between Highway 11 and Avenue A, where damage ranged from broken large limbs to uprooted and snapped trees. The tornado then traveled northeast with a long swath of damage centered along a track generally between Interstate 20/59 and Highway 11. Aside from continued uprooting of trees and downing of limbs, the first notable damage occurred just west of Western Hills Mall, where there was hefty damage to an Express Oil Change, Alabama ABC store, and mini strip mall, along Dr. M.L.K. Boulevard. Damage at this location was likely the result of a short-lived, concentrated vortex, with a track around 300 yards in length and EF1 intensity. Beyond this point, damage fell into EF0 range.

The tornado continued knocking down trees as it moved northeast, with some trees falling onto homes, resulting in severe roof damage. Tornadoic winds also caused minor to moderate roof damage ranging from missing shingles to sections of roof damaged or blown off, especially in neighborhoods adjacent to Miles College (to the south and northeast). Given a noticeable increase in damage density, it is possible that the tornado briefly intensified in this area, over the course of roughly a 700 yard path. While there was an obvious increase in the amount of uprooted trees, there was a large contribution from shallow root systems and especially saturated soil conditions; thus, given a lack of notable wind-driven damage to homes (which held in EF0, characteristic of shingle and roof trim damage), the overall damage pattern did not tip the scale for a small corridor of EF1 rating.

Next, the tornado neared and crossed Interstate 20/59 where the extent of damage backed off, though some minor structural damage done to the Tire Tech car bay, and Freeway Honda. Windows were also blown out of a few cars at the Honda dealership. An increase in the number of uprooted trees was again observed surrounding Tuxedo Park on the north side of Interstate 20/59, along with roof damage to a few homes. Tornado damage became very sporadic and increasingly less significant as the tornado neared Bankhead Highway, dissipating near the CSX Transportation railways adjacent to Pratt Highway.

JEFFERSON COUNTY --- 0.8 ESE MAXINE [33.57, -87.14]

Several trees uprooted along Alliance Road.

SHELBY COUNTY --- 0.5 ENE BOOTHTON [33.18, -86.97], 0.8 NE BOOTHTON [33.19, -86.97]				
	06/22/17 13:42 CST		0	Tornado (EF0, L: 0.27 mi , W: 50 yd)
	06/22/17 13:43 CST		0	Source: NWS Storm Survey

Storm Data and Unusual Weather Phenomena - June 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
NWS Meteorologists surveyed damage in western Shelby County and found damage consistent with an EF0 tornado, with maximum sustained winds near 70 mph. The tornado touched down along a gravel road off of County Road 10. The tornado was short-lived and produced a very brief path of uprooted and snapped trees. An on-duty mine guard sitting immediately adjacent to the damage path witnessed a sudden increase in winds, near-zero visibility, and popping of his ears.				

LAMAR COUNTY --- 1.0 NE VERNON [33.76, -88.11]

06/23/17 11:50 CST	0	Thunderstorm Wind (EG 50 kt)

Trees were knocked down on CR 261 near Adamsburg.				
A broken line of strong to severe thunderstorms pushed southeast through the Tennessee Valley during the early to mid-afternoon hours. Many of the storms produced strong outflow winds of 40 to 55 mph knocking down numerous tree limbs and small trees. A few pockets of higher winds of 55 to 60 mph knocked larger trees and power lines down. This resulted in scattered power outages.				
LAUDERDALE COUNTY --- 1.4 N RHODESVILLE [34.89, -87.87]

A tree was knocked down on the road at Macon Circle in Huntsville.				

Unstable and tropical air interacted with the remains of the circulation of former Tropical Storm Cindy to produce numerous showers and thunderstorms from late morning into the early afternoon hours. A few of these thunderstorms produced wind damage. Locally heavy rainfall of 1 to 3 inches in few spots produced brief excessive runoff and flash flooding.

Flash flooding resulted in the closure of Bassetts Creek Road.

Tropical Storm Cindy first developed in the central Gulf of Mexico on the afternoon of Tuesday, June 20th and made landfall between Cameron, LA and Port Arthur, TX during the early morning hours of Thursday, June 22nd. Despite the center of the storm being far removed from the north central Gulf Coast, the effects of Cindy extended several hundred miles to the east of the center and impacted the local area starting late Tuesday and persisting through the end of the week.

The primary impact across southwest and south central Alabama was from heavy rain and flooding. The highest storm total observed was in Thomasville, AL which measured 11.37" of rain ending Friday night, June 23rd. Numerous locations across south central and southwest Alabama recorded 5 to 10 inches of rain. The heavy rain resulted in numerous instances of flash flooding and minor to moderate river flooding.

Coastal flooding also impacted Mobile and Baldwin Counties, particularly in the typical low lying locations. Tidal gauges indicate the maximum inundation was around 3 feet MHHW in the north end of Mobile Bay.

Four tornadoes occurred in southern Alabama during Cindy, 3 EF-0 and 1 EF-1.

Two fatalities occurred, one due to high surf and one due to rip currents.
