limbs were knocked down. This is where the tornado was at its widest with other snapped trees noted along County Road 169. The last of the damage was found on County Road 817 with a metal roof from a house peeled off and thrown behind the house. A snapped tree was observed as well.

CULLMAN COUNTY 4.0 WNW JONES CHAPEL [34.25, -87.11], 2.9 NE JOI	NES CHAPEL	[34.25, -87.01]	
06/22/18 17:50 CST		0	Tornado (EF2, L: 5.56 mi , W: 180 yd)

As the tornado crossed from Winston into Cullman County, the tornado likely lifted shortly after crossing CR 1069 and producing minor limb damage. The tornado likely touched down again west of the CR 1055 and CR 1082 intersection. Extensive tree damage was observed. Numerous trees were either uprooted or snapped as the tornado tracked through a depression on the north side of CR 1055. Intensity was documented as 90 mph (EF-1) as it approached CR 1082. At this point, the tornado likely lifted again as it moved east of CR 1082 with only minor limb damage observed through Sullivan Creek.

Peak intensity of the tornado was observed along CR 1091, west of CR 1114. A one year old manufactured home was completely destroyed as it broke away from its anchors, causing 3 injuries. The home was perpendicular to the winds, facing due west. It was displaced about 20 yards from its original location. Three of four corner anchor units were ripped from the ground. The fourth remained lodged in ground but the metal strap was ripped from the I-Beam. It is worth noting that the anchors were approximately 2-3 feet into the ground, and were strapped to the I-Beam (from what could be observed). However, given the highly saturated, muddy soil, the anchors were pulled out as the home tipped backwards. Given this potential failure, winds were estimated at 130 mph (EF-2), or slightly above the expected value for a completely destroyed manufactured home. Additionally, near this location, several trees were uprooted. Peak width of approximately 180 yards were also documented in this area.

As the tornado tracked east, another area of downed branches and uprooted trees were noted east of CR 1107. This was the final location of observed damage as the tornado likely lifted and eventually dissipated along CR 1114.

A supercell tracked east along the far northern part of north Alabama near the state line during the early afternoon. This cell produced wall clouds, a couple of funnel clouds, localized wind damage and at least one report of penny sized hail.

Trees were knocked down onto Highwa	v 33 near the Winston County line.				
	,				

A long lived thunderstorm complex that originated in the upper Midwest arrived in north Alabama around midday on the 28th.

Widespread wind damage was reported with winds up to 100 mph in some locations as estimated by the damage. Unfortunately, one person suffered critical injuries sustained by a lightning strike in Hampton Cove and died about two weeks later.
