National Weather Service meteorologists surveyed damage in Blount County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 90 mph. The tornado touched down along Graves Cemetery Road south of Blount County Road 26, where a few small trees were damaged. It tracked northeast across County Road 26, where two smaller farm buildings were destroyed, and continued northeast producing sporadic minor limb damage as it crossed Royal-Liberty Road. At this point the storm path widened to 1275 yards as it spread along a valley parallel to Highway 79. The damage also intensified as it crossed Martin Road, uprooting numerous hardwoods, snapping a grove of pines, and causing damage to chicken barns. From here the tornado crossed Highway 79, moving nearly parallel to it for the last 3 miles of the track. At this point the tornado uprooted or snapped numerous large hardwoods and softwoods. Several chicken barns were damaged, a larger hay barn was destroyed, with relatively minor damage to homes along Highway 79. The tornado dissipated in a wooded area just south of Highway 278.

A slow moving upper trough over the Southern Plains States produced a series of mesoscale convective systems that moved out of Mississippi and across north Alabama.

Drier air aloft produced steep mid level lapse rates each day which resulted in a number of hail reports on April 6th and 7th. Low level winds backed during the early morning hours on April 8th and briefly produced favorable conditions for a weak tornado.

### MARION COUNTY --- 2.1 SSW SHOTTSVILLE [34.24, -88.14], 0.9 SW SHOTTSVILLE [34.26, -88.14]

04/13/19 22:57 CST 0 Tornado (EF1, L: 1.21 mi , W: 440 yd)

National Weather Service meteorologists surveyed damage in Marion County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 90 mph. The tornado touched down just southeast of the intersection of County Road 13 and Grant Road. It rapidly intensified as it tracked northward and crossed County Road 13, where it uprooted dozens of pine trees and a few hardwoods. The tin was partially torn off a small barn and was deposited to the west of the path. Just as quickly as the tornado intensified, it dissipated just north of County Road 13 before reaching County Road 56.

#### HALE COUNTY --- 0.4 NNW GALLION [32.51, -87.70], 2.0 E CEDARVILLE [32.61, -87.64]

04/14/19 00:26 CST 0 Tornado (EF0, L: 8.72 mi , W: 220 yd) 04/14/19 00:35 CST 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Hale County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado touched down on the south side of E Z Street just south of Highway 80 and tracked northeast where it knocked over a trailer at Mount Olive Missionary Baptist Church. The tornado continued northeast across Gallion Road where it caused timber damage and ripped most of the metal roofing and sides off a large metal shed. Timber damage continued as it moved northeast, impacting portions of Davis and Hall Roads. A home just west of Hall Road suffered minor damage to shingles and overhangs while a home on the north end of Hall Road was impacted by an uprooted tree that resulted in partial roof damage. A large shed between Hall Road and Highway 69 lost nearly all of its metal roof. North of the damaged shed, a home suffered minor siding damage. The tornado then tracked northeast, causing timber damage as it crossed Highway 69 and destroying a shed along with damaging another larger shed. Notable timber damage was observed north and northeast of this point as the tornado moved east of Highway 69 into uninhabited and inaccessible areas. Tornado damage was evident from Prairie Oaks Ranch located on Pecan Road. The tornado caused damage to several trees on the property and some fencing along Cat Bottom Road. The tornado moved northeast across open fields with timber damage along a tree line found along County Road 10. The tornado tracked northeast across County Road 9 where it ripped some metal tin off of a barn and caused additional tree damage. The tornado moved across open fields until it impacted portions of a tree line along a farm road just west of Highway 9. Additional timber damage was found further north along County Road 9 as the tornado turned more northeast. The tornado caused sporadic tree damage before lifting just south of County Road 16.

### TUSCALOOSA COUNTY --- 1.8 SSW HAGLER [33.01, -87.36], 1.8 NNE HAGLER [33.05, -87.34]

04/14/19 01:25 CST 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Tuscaloosa County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 105 mph. Although it was uncertain as to the exact location of initial touchdown due to inaccessible land, a TDS detected by the KBMX WSR-88D indicates the tornado touched down just north of the Bibb-Tuscaloosa county line. The first damage from the tornado was near Highway 82 near the intersection with Hagler-Coaling Road, where a few weakened large trees were snapped. Several trees fell into the highway but were removed before the survey. As the tornado crossed Highway 82, it intensified rapidly, uprooting scores of hardwood trees, removing the roof off a small barn, and peeling all the shingles off of a home. A cow was killed by one of the falling trees. The tornado continued north-northeastward over a hill and then down across Hagler-Coaling Road. The tree damage was not as concentrated, but several large hardwoods were snapped or uprooted, and a home sustained roof damage. The tornado lifted just east of Hagler-Coaling Road.

TUSCALOOSA COUNTY --- 2.2 SE DUDLEY [33.15, -87.27]

National Weather Service meteorologists surveyed damage in Perry County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado touched down near Iveys Chapel Church Road where a few trees were snapped. The tornado tracked northeast across inaccessible terrain until it crossed Mount Pilgrim Church Road where it uprooted some trees. The tornado continued northeast where it neared County Road 219 and removed a small portion of a farm shed. The tornado continued across agricultural fields then caused timber damage as it neared areas of trees. The tornado caused damage to homes just south of Melton Lane off of Highway 219. The tornado ripped nearly half of the roof off of a home and damaged siding. On the northwest side of the home strong winds pulled out two of the three support columns for the carport and that resulted in the roof partially collapsing. The tornado moved north along Highway 219 where it continued to cause notable timber damage. The tornado then tracked northeast across County Highway 183, where more timber damage occurred. The tornado continued northeast before dissipating near Barnette Road.

SHELBY COUNTY 1.9 NNW SIMMSVILLE [33.35, -86.69], 5.6 SW DUNAVANT [33.43, -86.6	3]	
04/14/19 03:05 CST	0	Tornado (EF0, L: 6.48 mi , W: 600 yd)
04/14/19 03:14 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Shelby County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado touched down just northeast of County Road 11 near County Road 36. This area was inaccessible, and the tornado start point was based upon a NEXRAD tornado debris signature from the KBMX radar. The tornado navigated rough terrain across Ivy Branch and into the northwest portion of a subdivision along Reach Crest Road and Reach Crest Drive, where thin tree trunks were snapped and other trees were uprooted. One tree was uprooted and fell onto a sports utility vehicle, damaging the rear door and knocking out the window. A nearby residence suffered notable roof damage resulting in three holes that penetrated the ceiling sheet rock and causing water damage to portions of the second level.

The tornado continued northeast where limited uplift to a roof occurred and a wind turbine ventilator was torn off the roof and found over 20 feet away from the home. Across the street along a narrow drainage basin, the funneling of inflow winds likely caused wind speed acceleration that knocked over a heavy metal outdoor grill, tore a few downspouts from their wall anchoring, and downed some fencing by snapping the support posts and blowing the wood at least 10 feet. Further northeast a small portion of a covered drive suffered some uplift of sheathing at North Shelby Baptist Church, where a few trees were snapped or uprooted near the entrance of Belcher Drive. To the east of Highway 280, multiple trees were snapped or uprooted along a portion of Old Highway 280 road near Salser Lane. The tornado tracked north-northeast of this point through uninhabited and inaccessible areas and then reached the Highland Lakes Subdivision where it crossed Highland Lakes Drive and affected areas along Southledge Road. The majority of damage here was due to snapped or uprooted trees though some minor roof damage was noted to a home along Southledge Road. Further northeast along Southledge Road near Ledge Circle, a home lost some shingles and a portion of a backyard fence was downed due to the winds.

The tornado continued northeast and affected some areas along Highland Lakes Trail,

Springhill Lane, Springhill Court, Mountain Trace, and Watersedge Circle. Nearly all of the damage in this area was to uprooted or snapped trees. One home did lose a window likely due to a falling tree. Further northeast the tornado produced tree damage on portions of Knollwood Drive, Watermill Circle, Highland Lakes Trail, Sandhurst Circle, Grove Park Parkway, and Grove Park Circle. Along Grove Park Parkway there was some roof damage to a home along with minor damage to two signs and one street light along the roadway. The tornado damage was confined to trees as it continued northeastward affecting portions of Milners Lane, Crescent Circle, Milners Way, Milner Road West, Milner Way, Hugh Daniel Drive, and Greystone Cove Drive. The tornado gradually weakened in this area and dissipated shortly before reaching Lake Hardwood Drive.

SHELBY COUNTY 1.1 NW CALERA [33.11, -86.79], 0.3 NW DARGIN [33.15, -86.77]

National Weather Service meteorologists surveyed damage in Shelby County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 70 mph. The tornado touched down near County Road 16 where it crosses the Vulcan Quarry, causing minor timber damage across Shelby County Road 16 that blocked the roadway. The tornado continued to the north-northeast through inaccessible forested areas and crossed the northern extent of the quarry where no damage was reported by personnel. The tornado moved nearly due north and caused some minor timber damage as it crossed Shelby County Road 22 and uprooted trees as it moved across Sharpsburg Circle. A nearby home had a portion of its wooden fence supports broken due to the winds. Behind a house three trees were uprooted. A few trees were uprooted at the eastern end of Ivanhoe Lane. Further to the north, the tornado crossed Rossburg Drive and Rossburg Place, causing significant roof damage to one home, broke apart portions of five fences, deposited plywood and some roofing material on the roof an other homes, uprooted a few trees and tore a small portion of a roof off of an upstairs room. The tornado then continued northward, between Little John Circle and Nottingham Drive, where it dissipated.

ETOWAH COUNTY --- 1.9 N GLENCOE [33.98, -85.93], 0.7 NNW HOKES BLUFF [34.01, -85.88]

National Weather Service meteorologists surveyed of	damage in Etowah County and	determined that	it was consistent w	ith an EF1 tornado, with maximum

National Weather Service meteorologists surveyed damage in Etowah County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 95 mph. This tornado began near Taylor Road where a large tree was uprooted and light trim damage was done to a house. Damage intensity rapidly increased as the tornado crossed Rabbittown Road. One residence had significant damage done to its roof and an exterior wall, along with broken windows. A car was also picked up/shifted. A second residence, which appeared to have very little/no anchoring, was greatly shifted from its foundation with heavy roof damage and broken windows. Across the street, a third residence had significant roof and wall damage, along with broken windows. The pattern of fallen trees in this vicinity indicated a cyclonic wind pattern, helping to confirm tornadic winds despite the storm's presentation on radar.

The tornado continued northeastward, knocking down additional trees as it crossed Highway 278. Several outbuildings were destroyed and tossed downwind at a residence located along Tidmore Bend Road. The tornado then crossed the Coosa River and caused light roof damage to a dock as well as knocked down some trees before dissipating just before Alford Bend Road.

Λ

Thunderstorm Wind (MC 54 kt)

National Weather Service meteorologists surveyed damage in southwest Pike County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 70 mph.

The tornado initially touched down north of County Road 6, several miles south of Goshen. It tracked north-northeast mainly over rural farmlands and open fields. Due to the lack of road access, the path width and length were estimated. Wind speeds were based on trees uprooted west of County Road 2243. The survey was prompted by a distinct TDS from the Fort Rucker WSR-88D.

National Weather Service meteorologists surveyed damage in far western Pike County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 70 mph.

The tornado initially touched down just west of Jones Bridge Road in Crenshaw County.

CHEROKEE COUNTY --- 4.0 ESE SLACKLAND [34.10, -85.77]

The tornado crossed into Pike County just north of Greenville Avenue and lifted west of the town of Goshen. Damage in Pike County consisted mostly of uprooted trees and a gas station suffered minor damage.

National Weather Service meteorologists surveyed damage in Pike County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 95 mph.

The tornado touched down in a mobile home community named Hunters Mountain Mobile Estates. Several mobile homes sustained major damage. Around one dozen mobile homes were moved off their foundations, while several were observed to have rolled multiple times. Several of these mobile homes were occupied, but only minor injuries were reported. Two cars were also rolled in the area of greatest damage. The tornado tracked northeast crossing Highway 231, where power poles were snapped and several businesses sustained minor damage. It then tracked just west of downtown Troy, where trees were uprooted and large branches were broken. The tornado crossed Highway 29 where additional businesses sustained minor damage, including an awning and several roofs. Several homes north of downtown sustained minor roof damage along with nearby uprooted trees. The tornado then tracked northeast and lifted near Gibbs Street, just southwest of Troy Elementary School.

Tornado (EF1, L: 6.10 mi , W: 219 yd)

Source: NWS Storm Survey

Location	Date/Time	Deaths &	Property &	Event Type and Details
		Iniuries	Crop Dma	

A tornado began southwest of the intersection of Highpoint and McAllister Roads and north of Bearden Rd. Numerous hardwood trees were either uprooted or had large limb damage. As the tornado approached Highpoint Road, it caused minor roof damage to two single-family homes and destroyed a large shed, that was unanchored to its foundation. Damage indicators further upstream were consistent with the assessment at Highpoint Road. A mix of hardwood and softwood trees were either snapped or uprooted along portions of Nixon Chapel Road and Section Line Road. A more concentrated area of heavy tree damage, with significant mobile home roof damage and minor single home roof damage, was noted in an area between Windsor Road and Mt. Olive Road, likely where the tornado peaked in intensity.

The tornado continued north-northeast toward U.S. Highway 431. The tornado started to quickly weaken as it crossed the junction of Oneonta Cutoff Road, Turnpike Road and County Road 205. Sporadic tree damage was observed around this location, causing power line damage. Finally, the tornado approached Highway 431 and damaged air-conditioning units and caused minor roof damage to two large retail buildings. Very minor limb damage was noted north of 431 where the tornado dissipated.

A tornado just before daybreak produced up to EF-1 damage in Marshall County from northwest of Douglas to south of Guntersville.
