Several trees uprooted in the community of Whitfield, along County Road 42.

MARENGO COUNTY --- 3.8 SSW DEMOPOLIS MUNI ARPT [32.42, -87.98], 2.7 ENE DEMOPOLIS MUNI ARPT [32.48, -87.91]

12/16/19 20:07 CST 0 Tornado (EF2, L: 5.95 mi , W: 350 yd) 12/16/19 20:16 CST 3 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in extreme northwest Marengo County and determined that it was consistent with an EF2 tornado, with maximum sustained winds near 120 mph.

The tornado first touched down along County Road 28 where minor tree damage was noted on the east side of the road. The tornado tracked northeast over mainly forested areas of Marengo County for several miles producing sporadic tree damage. The tornado widened and strengthened rapidly as it continued northeast toward Highway 80. The tornado reached its widest point near Highway 80. Substantial tree damage was noted on both the north and south sides of Highway 80 along and near the intersection of County Road 57. A home sustained roof damage along County Road 57. On the north side of Highway 80, property and structural damage was extensive. Several homes sustained roof and structural damage. One brick home sustained complete roof loss and partial wall collapse.

Just east of that location, a single-wide and double-wide manufactured home on the same property were completely destroyed with the undercarriage of both blown a substantial distance. Inspection of both dwellings indicated little to no anchorage of the structures. Three people were reported injured at this location with one being airlifted for more serious injuries. Tree damage in this area was extensive with large old growth hardwoods snapped. The combination of the damage to the conventional brick home, along with the tree damage and manufactured home destruction, prompted the maximum wind rating of 120 mph. The tornado continued its northeast movement damaging additional structures north of Highway 80 before narrowing and weakening south of the Sumter County line, just west of downtown Demopolis.

#### HALE COUNTY --- 5.7 SSW HOGGLESVILLE [32.77, -87.49], 4.6 S HOGGLESVILLE [32.78, -87.47]

12/16/19 21:03 CST 0 Tornado (EF0, L: 1.52 mi , W: 220 yd)

12/16/19 21:05 CST 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in eastern Hale County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 75 mph.

The tornado touched down along County Road 32 in eastern Hale County where a few pine trees were uprooted. The tornado tracked northeast and crossed into Perry County about one-half mile south of Massengale Road.

### PERRY COUNTY --- 3.8 NW MORGAN SPGS [32.78, -87.47], 4.6 N MORGAN SPGS [32.82, -87.42]

12/16/19 21:05 CST 0 Tornado (EF0, L: 3.83 mi , W: 300 yd)

12/16/19 21:12 CST 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northwest Perry County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 80 mph.

This is a continuation of a tornado path that began in Hale County. The tornado entered Perry County about one-half mile south of Massengale Road. The tornado tracked northeast across Fellowship Cemetery Road and Little Brush Creek and dissipated just east of County Road 29. At least one hundred trees were snapped or uprooted along the path.

### BIBB COUNTY --- 3.6 NNE VICK [32.98, -87.05], 2.4 S SIX MILE [32.99, -87.00]

12/16/19 21:49 CST 0 Tornado (EF0, L: 3.12 mi , W: 200 yd)

12/16/19 21:55 CST 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in east central Bibb County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 70 mph.

The tornado began northeast of the city of Centreville in an inaccessible area east of Gary Springs Loop Road, where a well-defined tornado debris signature was observed by the KBMX radar. The tornado tracked eastward and crossed County Road 57 and Pine Tree Road before dissipating near Tucker Road. A few trees were uprooted along the path.

CHILTON COUNTY --- MAPLESVILLE [32.78, -86.88]

		Injuries	Crop Dmg		

A team consisting of National Weather Service, Lawrence County Emergency Management, and an Auburn University Structural Engineering survey team determined the damage in northern Lawrence County was attributed to a strong EF-2 tornado.

Damage was first observed along CR 101 north of CR 143. Large-limb tree damage was the primary damage indicator observed in this area, with estimated winds of 107 mph close to touchdown.

East of CR 101, the tornado intensified significantly as it approached CR 265. Approximately 1 mile south of Highway 20, major damage occurred to three structures. Structure damage indicators were a combination of single wide and double wide manufactured homes. It should be noted that one of the structures listed as a double wide was a prefabricated home with no anchor system. The traditional double wide manufactured home included an auger anchor system while the single wide home had a pan anchor system. Regardless of the anchor, each system failed due to intense lifting force, which led to the structure to roll off its plot, causing total destruction. Two fatalities and an injury were reported at the double wide home, with additional injuries at the other destroyed structures.

Thanks to preliminary footage from an Alabama Emergency Management Agency drone team, the tornado was observed to take a slight right turn and continue toward the Courtland area. Along and south of Alabama Highway 20 in Courtland, uprooted and large snapped tree branches were the main damage indicators. A small mobile home was slightly shifted off its plot, denoting mid-range EF-0 winds. The path continued east-northeast and crossed U.S. Highway 72, causing more tree damage on CR 150. Along CR 150, south of CR 400, the strongest damage indicator was a small and well-built block outbuilding. This structure was mostly destroyed, except for a back wall. The tornado continued to weaken as it approached and crossed CR 389. Large tree branches were downed and minor roof damage was observed at three residences. Minor tree damage continued toward the river in the vicinity of CR 400.

The tornado crossed the Tennessee River and laid down again on the Limestone County shore near Brigadoon Drive. At this location, a home on the river was observed to have metal roofing blown off. Additionally, hardwood trees were uprooted in the neighborhood. The tornado continued toward the Ripley Road and Batts Road. intersection where it caused minor roof damage to a single family home, uprooted trees, and destroyed a small shed. The tornado crossed Ripley Road where a couple more trees were uprooted and large branches were knocked down before it lifted near the southern area of Snake road.

A tornado touched down approximately 0.3 miles west of the intersection of Zelner Road and Ripley Road in southern Limestone County. Upon touchdown the tornado produced tree damage. Tracking to the northeast, the tornado produced damage to a metal barn roof along Bell Road, snapped a tree at the base, and uplifted an attached roof of a porch on a small home. Farther to the northeast, the tornado produced mainly roof and window damage in a mobile home park along the west side of Blackburn Road. On Ham Road, more extensive damage was found to a mobile home, which was pushed back about six feet, detaching it from an awning and cement parking pad. This mobile home was anchored to concrete pads that were sitting on gravel, but the mobile home was left largely intact. The tornado continued to snap trees across Evans Road and Reid Road. As the tornado approached U.S. Highway 72, it produced significant damage to a metal-sided outbuilding, while producing mainly roof and siding damage to a couple of metal building systems on the south side of U.S. Highway 72. The tornado produced damage to a couple of metal signs at a gas station located along the north side of U.S. Highway 72 at the intersection of W. Washington Street. Along W. Washington Street, tree damage continued, with some trees uprooted, including a tree that fell on a vehicle. At the intersection of W. Glenn Valley Drive and W. Washington Road, a large tree branch fell, partly on a house. The tornado appeared to lift near this point, with some minor tree damage farther to the northeast in western portions of Athens.

Water in homes at Creek View Apartments in Town Creek. Residents were evacuated from the complex. Time is when report was relayed via EMA.

The first of two lines of thunderstorms arrived in northwest Alabama during the early afternoon hours producing a couple reports of wind damage. The second and more intense line of thunderstorms arrived during the early evening hours, and produced several reports of wind damage, one tornado in Limestone County, and flash flooding which killed one person.

After 2-3 inches of rain in less than two hours, a flash flood occurred along Anderson creek in Lauderdale County, sweeping three cars off of two roads affected. One person was killed, while at least two others were rescued.

A storm survey determined that an EF-0 tornado occurred southwest of Athens.

Tornado moved into Choctaw County AL from Clarke County MS along CR 20. Several softwood trees were snapped and hardwoods uprooted along CR 20. As the tornado moved northeast, tree damage continued along Hinton Rd and Faith Rd in the Hinton community. Minor roof damage occurred to a home along Hinton road and a single wide modular home was flipped on its side and heavily damaged. The track continued northeast across Rock Gap Rd and eventually across Mt. Nebo Rd where numerous hard and softwoods were uprooted or snapped. A roof of a two story home was partially removed along Highway 10 and several large hardwood trees were uprooted. The tornado crossed highway 10 where it lifted just west of Ruffintown Rd. The damage along the Choctaw County portion of the track was consistent with a high end EF-1.

This tornado is a continuation of a track that began in Jones County MS and produced EF-3 damage in Laurel. Based on information from NWS Jackson, the tornado tracked a total of 51 miles from Jones County northeast into Clarke County MS. The tornado continued an additional 10 miles in Choctaw County AL before lifting.

High winds downed trees in Yantley.

A strong storm system moved across the southeastern states during the day. Severe thunderstorms developed ahead of this system and moved across the area through the late afternoon and evening hours. This system produced a long track tornado that began in Jones County Mississippi and moved into Choctaw County Alabama. The damage along the Choctaw County portion of the track was
