Storm Data and Unusual Weather Phenomena - March 2020 Date/Time Deaths & **Event Type and Details** Location Property & Injuries Crop Dma ALABAMA, Central HALE COUNTY --- 2.7 WSW GREENSBORO [32.68, -87.62], 2.0 ESE GREENSBORO [32.69, -87.55] 03/03/20 06:04 CST 0 Tornado (EF0, L: 4.34 mi, W: 220 yd) 03/03/20 06:12 CST 0 Source: NWS Storm Survey National Weather Service meteorologists surveyed damage in eastern Hale County and determined that it was consistent with an EF0 tornado, with maximum winds near 75 mph. The tornado touched down near Royal Estates Drive, just southwest of the town of Greensboro. The tornado tracked east-northeast where it snapped and uprooted numerous trees near a ballpark on Highway 69. Nearby homes suffered structural damage due to fallen trees, as well as varying degrees of minor roof and siding damage. Farther downstream, tree damage was observed on Cherokee Terrace where numerous pines were uprooted. The tornado continued east-northeast where minor structural damage was observed near Centerville Street and Avery Drive. The tornado then turned to the east and east-southeast where it uprooted several trees on County Road 7 before dissipating near Whitsitt Creek. BIBB COUNTY --- 4.1 W ACTIVE [32.86, -87.05], 1.6 ESE LAWLEY [32.86, -86.94] 03/03/20 06:28 CST 0 Tornado (EF1, L: 6.21 mi, W: 525 yd) 03/03/20 06:38 CST 0 Source: NWS Storm Survey National Weather Service meteorologists surveyed damage in far southeast Bibb County and determined that it was consistent with an EF1 tornado, with maximum winds near 110 mph. The tornado touched down in a heavily wooded area just west of Liberty Road in southeast Bibb County. The tornado intensified to EF1 strength where it knocked a manufactured home off the foundation, and displaced a nearby vehicle. Nearby, extensive tree damage was observed with at least several dozen trees snapped or uprooted. The tornado continued on an eastward path where it continued to cause extensive tree damage, as well as damage to at least three homes along Maude Tower Road and County Rd 29. The tornado then tracked over a heavily wooded area near Trail Branch before crossing Highway 82. It then caused numerous trees to be snapped or uprooted near the Lawley Fire Department and Community Center. The tornado dissipated just east of County Road 36 near Oakmulgee Creek. SUMTER COUNTY --- 6.9 S SILOAM [32.33, -88.26] 03/04/20 04:40 CST 0 Thunderstorm Wind (EG 50 kt) 0 03/04/20 04:41 CST Source: Fire Department/Rescue Several trees uprooted and a shed destroyed on Bumkun Road. MONTGOMERY COUNTY --- 1.8 N STRATA [32.06, -86.30] 03/04/20 06:01 CST 0 Thunderstorm Wind (EG 50 kt) 03/04/20 06:02 CST 0 Source: Emergency Manager Several trees uprooted on Hickory Grove Road, near the intersection of Highway 331. PIKE COUNTY --- (TOI)TROY MUNI ARPT [31.87, -86.02] 03/04/20 06:41 CST 0 Thunderstorm Wind (MG 59 kt) 03/04/20 06:43 CST 0 Source: ASOS KTOI ASOS reported a peak wind gust of 59 mph. Multiple reports of trees uprooted across the city of Troy. **BULLOCK COUNTY --- PEROTE [31.95, -85.70]** 03/04/20 06:50 CST 0 Thunderstorm Wind (EG 50 kt) 03/04/20 06:52 CST 0 Source: Public Numerous trees uprooted in the community of Perote. BARBOUR COUNTY --- 0.5 SSE PRATTS [31.82, -85.52]

Several trees uprooted along Highway 51 between the towns of Louisville and Clayton. Trees also uprooted along Highway 239 and County Road 25.

03/04/20 07:18 CST

03/04/20 07:20 CST

Location Date/Time Deaths & **Event Type and Details** Property & Injuries Crop Dmg National Weather Service meteorologists surveyed damage in northeast Pike County and determined that it was consistent with an EF0 tornado, with maximum winds near 75 mph. The tornado formed in a wooded rural area south of Highway 223 and the Sandfield community. Several trees were uprooted as it crossed a dirt road and County Road 6615. The tornado appeared to dissipate prior to reaching the Bullock County line. A brief tornado debris signature was also observed on the KMXX radar BARBOUR COUNTY --- 1.3 SE COTTON HILL [31.82, -85.26], 2.6 ENE TERESE [31.82, -85.13] 03/31/20 10:34 CST n Tornado (EF2, L: 7.85 mi, W: 350 yd) 03/31/20 10:46 CST 0 Source: NWS Storm Survey National Weather Service meteorologists surveyed damage in southeast Barbour County and determined that it was consistent with an EF2 tornado, with maximum winds near 130 mph. The tornado formed in a wooded area west of Lee Parker Lane, just north of Highway 131 and to the northeast of the town of Baker Hill. The tornado tracked northeastward uprooting trees and causing minor roof damage to two residences along Five Mile Road. It continued to snap trees as it tracked through a wooded area. The tornado crossed Highway 131 near Leroy Road where two residences and a mobile home suffered minor damage. The tornado intensified as it crossed Highway 431 with the most significant damage in the Country Club of Alabama neighborhood, along the south side of Pebble Beach Drive. Large sections of roofs were removed from a few well built residences with collapse of some exterior walls. The tornado crossed the Walter F. George Reservoir along the Chattahoochee River and continued into Quitman County in Georgia. A strong upper level disturbance caused a wave of low pressure to form along a quasi-stationary front and move eastward along the Highway 80 and Interstate 85 corridors. This allowed a warm front to lift northward across the southeast portions of Central Alabama. North of the warm front, a line of showers with sporadic lightning strikes along an inverted trough was able to produce damaging winds despite a cool and stable air mass at the surface, knocking down numerous trees from Tuscaloosa County to Randolph County during the first part of the morning. A QLCS ahead of the cold front moved eastward later in the morning from Lowndes County to Barbour County, producing sporadic damaging winds. Additionally, bookend vortices and embedded supercell structures several weak tornadoes and one strong tornado. A tree and a power line were blown down near 9	00 Harden Road in Madrid.			

A strengthening surface low pressure area moved across the Tri-State region. A warm front lifted northward through the area, and a cold front moved through during the afternoon hours. Scattered thunderstorms moved across the area, some of which were severe.

Straight line winds caused significant damage to trees and power lines in Thomasville.

High winds snapped trees in the Gateswood community.

An area of low pressure and trailing cold front moved across the southeastern states. A very warm and moist air mass developed ahead of this system and allowed strong to severe storms to develop. The thunderstorms produced several reports of wind damage across southwest and south central Alabama.
