Golf Ball size hail reported in the town of Smiths	s Station.			

A line of storms with embedded supercells developed south of an outflow boundary ahead of a slow-moving cold front, producing damaging winds and several tornadoes across the northern portions of central Alabama during the evening hours on December 29th. The surface boundary shifted into the southern counties of central Alabama on December 30th. The low level shear was not favorable for tornadoes, but the storms were robust enough to produce damaging winds and large hail.

A few trees were blown down near Abbeville.

Scattered thunderstorms ahead of a cold front produced sporadic wind damage and a couple of tornadoes across the tri-state area.

Most of the damage occurred in Georgia with only the only report in southeast Alabama being a few trees blown down in Henry county.

River Road was washed out near Brady Road due to a rapid rise of the nearby Styx River. The nearby Styx River gauge at Smith's Landing rose 10 feet from 11pm on the 9th to 9am on the 10th.

A slow moving warm front combined with several upper level disturbances generated clusters of showers and thunderstorms that produced locally heavy rain and flooding.
