National Weather Service meteorologists surveyed damage in southwest Chilton County and determined that it was consistent with an EF0 tornado, with maximum winds near 80 mph. This tornado began in Perry County and crossed into Chilton County near Jim Foundry Road. The tornado traveled east-northeast through the Talladega National Forest before a right turn near County Road 307. It then traveled east-southeast crossing near the intersection of Highway 82 and Highway 22. The tornado then tracked in a more easterly direction before dissipating near County Road 15. Damage consisted mainly of snapped and uprooted trees.

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

A multi-day severe weather event unfolded across Central Alabama from May 2nd through May 4th. Alabama remained on the eastern side of a broad upper trough positioned over the Plains States. Several upper level impulses emanated from the trough axis and produced severe weather across Alabama. The main severe weather event occurred on May 4th when a QLCS tracked eastward across areas along and east of I-20 and produced widespread wind damage, flash flooding, and tornadoes.

Portions of 6 city streets were under water, with around 3 feet of water over the roads at one point.

A complex of thunderstorms dropped southeast from Tennessee. Outflow from these thunderstorms produced new strong to severe thunderstorms over north Alabama during the mid to late morning hours. There were several reports of wind damage, including a measured wind gust of 58 mph at the Huntsville International Airport. An EF-0 tornado produced a short track of damage in Higdon. Rainfall of 1 to 3 inches fell in a very short period of time producing brief flash flooding as well on the north side of the Quad Cities.

Time estimated by radar. During the afternoon hours, a band of thunderstorms produced a lightning strike causing damage in a residential neighborhood of Madison. During the evening hours, a second broken line of thunderstorms, along with clusters of thunderstorms moved through north Alabama and and southern middle Tennessee during the late afternoon through mid evening hours. The line of thunderstorms produced pockets of higher winds that produced sporadic damage to trees and power lines. Power outages resulted in parts of the area, including northern Madison County. ALABAMA, Southeast

A potent spring storm system swept across the southeast during the day. An associated strong cold front moved with numerous strong to severe thunderstorms developing across the area, resulting in widespread wind damage and very heavy rain.

High winds downed trees across multiple roads in Greenville.
