	06/14/23 11:20 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in far eastern Barbour County and determined that it was consistent with an EF 1 tornado, with maximum winds near 110 mph. The tornado touched down in a forested area between Sandy Lane west of Highway 30. The tornado quickly intensified and snapped or uprooted a number of large pine trees on the south side of Highway 30. The tornado crossed Highway 30 and uprooted another grove of pine trees and causing damage to a church. The tornado weakened slightly as it crossed US Highway 431, then rapidly intensified and caused the most significant tree damage along the path on the western banks of Barbour Creek, with snapped and uprooted trees, some of which caused major damage to a home. The tornado continued east-northeast and crossed Paul Lee Parkway and State Docks Road, where more trees were uprooted, the side of a metal building structure was removed, and three units of an apartment complex sustained partial roof damage. The tornado then caused another area of significant tree damage between Cypress Cove Drive and Inlet Road. The tornado weakened after moving over the waters of the Walter F George Reservoir and likely dissipated.

A tornado began just west of Bento	n Road in the trees prior to	-		
noving over a field and farmhouse.				
notable damage occurred. A farm b	-			
emoved which was reinforced with kely have required around 100mph	-			
oofing material was quickly wrappe	-			
circulation and thrown back and wra				
he building. In addition to this, inflo				
strengthened with a tree stand to th rees snapped and uprooted facing	•			
n the tornadic circulation being app	-			
garage attached to the home just ea	ast of the farm building had 50%			
of its roofing material removed and				
back. A small outbuilding at this loca debris thrown across the field. The f	-			
ield into an area of forest where dro				
snaps and uproots along a narrow o	•			
The tornado appears to have shrun				
next home southeast of the field wh	•			
occurred along with a small outbuild ikely the tornado continued to the s				
strengthened, however the area is o				
ikely need to be assessed via high	resolution satellite imagery			
when available. Special thanks to B				
drone footage of this part of the torr	ado path.
