# ALABAMA, Central MARION COUNTY --- 0.7 SSE SHOTTSVILLE [34.26, -88.13], 4.7 W WIGINTON [34.28, -87.95] 03/01/23 21:54 CST 0 Tornado (EF1, L: 10.10 mi , W: 500 yd)

National Weather Service meteorologists surveyed damage in northwest Marion County and determined that it was consistent with an EF 1 tornado, with maximum winds near 90 mph. The tornado began near the Shottsville Community Church along County Road 56, where it produced minor damage to the exterior of the church building. The tornado tracked east northeast before reaching Reid Road where a higher degree of damage was first noted. There were multiple uprooted softwood trees in a broad area stretching from Reid Road to Highway 19. There was also a home on Reid Road which sustained damage to its metal roof, and a large tree fell on top of a barn in the backyard. While the degree of surrounding tree damage was noteworthy, several homes within the path on Highway 19 were undamaged. The tornado continued east-northeast uprooting several softwood trees along Triplett Road and producing a more concentrated area of uprooted and snapped softwood trees along County Road 317.

The tornado reached Nichols Cemetery Road where it appeared to be weakening as the damage mostly consisted of broken large branches. However, upon reaching County Road 178, the tornado uprooted several softwood trees before lifting shortly thereafter in a wooded area east of County Road 178.

A cold front pushing southward out of Tennessee and into north Alabama encountered a moderately unstable air mass. There was enough low level shear for rotating storms, and one tornado touched down in Marion County. The presence of a warm layer aloft hindered any additional severe weather development.

	03/26/23 21:27 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northeast Elmore County and determined that it was consistent with an EF 1 tornado, with maximum winds near 110 mph. The tornado touched down in a wooded area just west of Tecumseh Point Road where tree damage was immediately significant along a fairly wide path. The tornado then moved into the southwest portion of Lake Martin and across the Castaway Island area, where numerous pine trees were uprooted, with some falling on power lines and homes. The only visible damage to any structures appeared to have been caused by fallen trees. From there, the tornado moved back over the water and then into The Ridge neighborhood. Three to four homes right along the lakeshore on Sundown Ridge and Dawson Point roads sustained considerable roof and siding damage, and many surrounding trees were uprooted. A couple of roughly 130-foot tall concrete electric transmission poles were downed south of the main path at the end of Dawson Point Road. Immediately east, more trees were downed along South Ridge Road, although surrounding homes appeared to have no visible damage. The tornado then crossed an inaccessible island before moving into Tallapoosa County near Long Beach Drive.

#### TALLAPOOSA COUNTY --- 5.4 W BARNESVILLE [32.71, -85.89], 2.7 WNW BARNESVILLE [32.72, -85.84]

03/26/23 21:27 CST 0 Tornado (EF0, L: 2.93 mi , W: 950 yd) 03/26/23 21:29 CST 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in southern Tallapoosa County and determined that it was consistent with an EF 0 tornado, with maximum winds near 75 mph. This tornado started in Elmore County and crossed into Tallapoosa County near Long Beach Drive. The tornado tracked east-northeast for several miles before dissipating near Centerport Road. A few trees were uprooted along Long Branch Drive and Old Tree Road.

## RANDOLPH COUNTY --- 5.1 NW ALMOND [33.19, -85.65], 3.4 WSW ALMOND [33.11, -85.65], 3.1 SSE LIME [33.11, -85.23], 1.4 SE WEHADKEE [33.21, -85.25]

Widespread 3-5 inches of rainfall across southern Randolph County. Several streets in Wadley and Roanoke were flooded and impassable.

#### MACON COUNTY --- 0.9 NNW TYSONVILLE [32.41, -86.01], 2.1 W CHEHAW [32.47, -85.76]

03/27/23 01:41 CST 0 Tornado (EF2, L: 15.41 mi , W: 1450 yd) 03/27/23 02:06 CST 0 Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northwest Macon County and determined that it was consistent with an EF 2 tornado, with maximum winds near 125 mph. The tornado touched down in the area of Tysonville Road, with only sporadic tree limbs and small trees uprooted. Damage became more concentrated along County Road 138, where the attached carport of a house was ripped away and destroyed. Numerous trees, mostly pine, were uprooted along a path of several hundred yards. On County Road 40, the damage became more intense, with dozens of trees uprooted. The top of a grain silo was blown off, with roofing material scattered southward, before the tornado reached the cotton gin in Milstead. Here, the main structure sustained significant damage, with failure of the roofing system and outer walls of the structure, earning the EF2 rating. Most of the inner walls remained standing, and two large buildings adjacent to the main structure only sustained comparatively minor roof and siding damage. Just east of the structures, significant tree damage was observed around a small lake. Along the road and railroad immediately south of the cotton gin, numerous concrete power poles were pulled down in a northward direction across the railroad tracks, and a pivot irrigation system was flipped in a large field. The tornado continued eastward, where the Auburn University E.V. Smith Research Center sustained damage to several buildings on the property, with one farm shed partially collapsing and roofing material blown northward across the road. Widespread tree damage continued along County Road 9 for around three miles, although most of the trees that were uprooted were pine trees. There was also occasional minor damage to roofing on homes, mostly caused by trees. Damage became much more sporadic as the tornado passed through the Franklin community, with only a few trees uprooted. There was a slight uptick of more concentrated tree damage on the east side of County Road 27 before the tornado dissipated.

# COOSA COUNTY --- 3.9 WSW MARBLE VLY [33.03, -86.51], 1.0 NNE LAKE MITCHELL [32.86, -86.44], 5.8 N MARTIN LAKE [32.86, -86.01], 2.3 NNE SOLECO [33.06, -86.01]

Supercells erupted during the late afternoon and early evening hours in northern Mississippi and spread east across north Alabama during the rest of the evening into the overnight hours. At least one tornado was determined to produce damage in northern Madison County near New Market. Other reports of damaging winds were reported. The other impact from this evening was excessive rainfall

Reports across the county of trees being knocked down.

A prolonged damaging gradient wind event combined with an intense squall line during the daylight hours of the 3rd to produce widespread wind damage and impacts to the region. Numerous power outages resulted from power poles being snapped and power lines being brought down. All told, thousands were without power in north Alabama for at least for a couple of hours, and in some cases lasting into the next two to three days. Hundreds of reports of trees or limbs being knocked down were received, in many cases on homes, vehicles and other structures. Sadly, two people were killed outside their homes from fallen trees while picking up debris after the line of thunderstorms went through and additional high winds developed. Other minor injuries were also reported including one utility worker who was working to restore power.

A powerful low pressure system intensified rapidly as it moved northeast from Texas through Arkansas, southeast Missouri into western Kentucky. In doing so, very windy conditions developed across the Tennessee Valley ahead of an associated cold front and squall line. South winds increased to 35-45 mph, with gusts of 55-60 mph at times. An intense squall line moved in from Mississippi during the mid morning hours, sweeping east across the rest of the area through the midday hours. Peak wind gusts of 50-60 mph were reported frequently, with one gust up to 77 mph at Pryor Field in Decatur (Morgan County) and 69 mph at the Huntsville

COLBERT COUNTY --- 0.8 SSE MAUD [34.64, -88.12]

**Event Type and Details** Injuries Crop Dmg International Airport (Madison County). Also, at least two tornadoes were spawned by the line in Jackson County. Behind the line of thunderstorms, the sky cleared out rapidly, but southwest winds intensified as well, with 35-45 mph sustained winds, gusting at 55-65 mph. The winds finally subsided quickly near sunset, but not after additional damage occurred. A bow echo from an embedded supercell within a line of thunderstorms intensified and produced a long-lived and at times wide swath of wind damage as it entered the Shoals, including Florence and Killen, to the east central part of Lauderdale County north of Elgin. Widespread wind damage occurred in south, southeast and eastern Florence to Killen, becoming more sporadic further east. Wind speeds of 60-65 mph occurred in much of this area, with a few gusts of 80-90 mph in a few locations. One of the hardest hit locations was between Killen and Florence where the entire roof was taken off of antique mall, a sign was blown out at a church, and roofing was taken off of a fire station. Trees, power poles and power lines were taken down in numerous locations, stormwater and gas lines were damaged, and debris and utility restoration costs were extensive. Schools buses were damaged, parks were damaged with extensive cleanup. A significant number of residences experienced damage due to falling trees. Damage, cleanup and repair costs are in the millions of dollars.

A bow echo from an embedded supercell within a line of thunderstorms intensified and produced destructive winds in a narrow swath of north and northeast Florence.

Wind speeds of 60-65 mph occurred in much of this area, with a few gusts of 80-90 mph in a few locations. Trees, power poles and power lines were taken down in multiple locations. Trees were knocked down onto multiple homes and vehicles. The Seven Points district and areas just north and northeast of the University of North Alabama campus were hit particular hard. Along this long swath, a significant number of trees, power lines and power pols were knocked down. Many residences experience minor to severe damage from trees falling onto their homes or vehicles.

03/24/23 21:54 CST 3.90M Tornado (EF2, L: 3.82 mi , W: 300 yd) 03/24/23 22:02 CST 0 Source: NWS Storm Survey

The tornado touched down near the intersection of Sweetwater Avenue and Huntsville Road in southeast Florence. The tornado nearly paralleled Sweetwater Creek as it tracked northward. Along Sweetwater Creek and Sweetwater Avenue, numerous trees were uprooted and snapped and structures and small outbuildings were damaged. There was also minor room damage to a single family home. As the tornado crossed Highway 43, more trees and minor structure damage was observed near Mall Road and north of Hough Road. The tornado approached Hunter Ridge subdivision northeast of Florence and south of Saint Florian along County Road 61, removing part of a roof at the back of the neighborhood. The tornado then moved northeast into the Plantation Springs subdivision, damaging roofs to two homes on the southeastern corner of Plantation Springs Drive around the Blackberry Trail Golf Course. The tornado then strengthened to its strongest and widest point between Cottonwood Trail and Karley Lane, producing the most widespread structure damage along its path here. About half of the roofs of several homes were destroyed, and the backside of the homes sustained severe damage as the tornado moved through the area. At this point, the tornado was about 100 yards wide, and produced peak winds of 120 mph at this location. The last house on the northeast corner of Plantation Springs Drive sustained the worst damage near the golf course, with more than half the roof destroyed and two rooms with walls collapsed at this location. The tornado lifted shortly after this point.

A National Weather Service and Lauderdale County Emergency Management Agency damage assessment team surveyed damage consistent with an EF -1 tornado near Anderson. Peak winds were estimated at 97 mph. The main damage indicators for this assessment were from uprooted or snapped trees and minor structural damage, mainly to roofs. The tornado touched down off County Road (CR) 49, near the West Fork of Anderson Creek and tracked east-northeast along Highway 64. Along Highway 64, between CR 508 and CR 93, numerous trees were uprooted with a couple of snapped trees that fell on at least one home. Near CR 508, one home sustained roof damage with greater than 20% loss of roofing materials. Additionally, a small garage was completely destroyed when the garage door caved in. The tornado began tracking more northeast as it passed CR 93. More trees were uprooted and sporadic limb damage was noted through CR 207 as the tornado lifted.

A 67 mph wind gust was measured northwest of Rogersville.

LAWRENCE COUNTY --- 7.6 S MT HOPE [34.34, -87.47], 6.5 WSW LEOLA [34.34, -87.43]

An official from the Bankhead National Forest reported tornado damage to the National Weather Service (NWS) in a remote area. After reviewing high resolution satellite data through the United States Geological Survey (USGS), the NWS has determined an EF-1 tornado occurred. Damage indicators were mostly noted as hard wood tree uproots. Satellite imagery showed large swath of trees uprooted as evidenced by Worldview (~35 cm) imagery. Tree fall patterns indicates convergence and falls partly perpendicular to storm track. Based on this information, the tornado touched down near Northwest Road and Thompson Creek and lifted near Braziel Creek.

Several trees and power lines were knocked down along Highway 36 and CR 81.

LAWRENCE COUNTY --- 3.9 WSW SPEAKE [34.40, -87.13], 2.4 WSW SPEAKE [34.41, -87.11]

The tornado likely first touched down between County Road 203 and Highway 157 in far eastern Lawrence County. Minor roof damage to chicken houses was noted at this location before the tornado crossed the highway. Sporadic tree damage was observed near the Highway 36 and CR 200 intersection. Peak wind speeds of 74 mph were estimated. The tornado then moved into Morgan County toward Danville.

MORGAN COUNTY --- 0.9 SE DANVILLE ARPT [34.41, -87.11], 2.6 NNE HARTSELLE [34.46, -86.91]

 $03/24/23\ 23:24\ CST \qquad \qquad 1 \qquad \qquad 0 \qquad \qquad \text{Tornado}\ (\text{EF2, L: } 12.00\ \text{mi , W: } 175\ \text{yd})$ 

03/24/23 23:29 CST 0 Source: NWS Storm Survey

A tornado tracked out of far east central Lawrence County into Morgan County. Minor damage was noted around Danville High School with the football scoreboard partially destroyed. The tornado intensified as it tracked east- northeast toward Targum Road. Uprooted trees, minor damage to a home, and a destroyed carport were observed. Tracking east, the tornado uprooted and snapped a significant number of trees along Iron Man Road and Forest Chapel Road. While there was heavy structural damage to single-family homes, the bulk of the damage was due to trees falling on houses. The tornado remained on the ground uprooting trees and tracking toward Vaughn Bridge Road. Near the Vaughn Bridge and Vest Road intersection, the tornado lifted and snapped the anchoring system of a single-wide mobile home. This caused the unit to overturn and roll, destroying the home. One fatality was reported at this location. Given the degree of damage, and strapping of anchors to the I-beam, the damage indicator held consistent with expected wind speed values. As the tornado tracked east, numerous trees were uprooted causing structural damage along Highway 31 and further east on Sparkman Street and through Bethel Road. The tornado likely lifted before the Bethel Road and I-65 intersection.

Direct Fatalities: M67MH

MORGAN COUNTY --- 0.5 ESE PRICEVILLE [34.37, -86.87], 2.8 NNE GANDYS COVE [34.41, -86.80]

Aerial surveillance provided by Jackson County Emergency Management Agency (EMA), supplemented by a ground survey of National Weather Service personnel and DeKalb County EMA confirmed an EF-1 tornado near the Flat Rock area.

The tornado touched down southwest of CR 81, north of Flat Rock near Fabius Poultry. Multiple chicken houses sustained roof damage at this location. The tornado tracked east toward CR 81 where numerous softwood trees were uprooted. The final damage point was east of Highway 117 where a possible ground scar was noted. Damage was then reported along and between Highway 71 and CR 326 to the county line. Uprooted trees and minor structure damage was observed in this location.

Aerial surveillance provided by Jackson County Emergency Management Agency (EMA), supplemented by a ground survey of National Weather Service personnel and DeKalb County EMA confirmed an EF-1 tornado near the Flat Rock area.

The tornado tracked from Jackson into DeKalb County where it caused minor roof damage to a single-family home and uprooted several trees. As it tracked east to Highway 75, power poles were tilted, and additional trees were uprooted before the tornado lifted just east of Highway 75.

A severe line of thunderstorms rolled through north Alabama during the late evening hours of the 24th into the early morning hours of the 25th, producing 7 tornadoes. An embedded supercell thunderstorm with a history of tornadoes in Mississippi moved east-northeast across northwest Alabama, yielding another two tornadoes in Lauderdale County in Florence and near Anderson. Associated with this line, multiple narrow swaths of intense damaging winds of 60 to 90 mph occurred across the Shoals metro area, including Sheffield, Tuscumbia, Muscle Shoals and Florence. The winds caused widespread power outages, damaged numerous structures, and toppled or snapped numerous trees, power poles and power lines. A few trees and power poles were dropped onto residences and vehicles, either destroying or heavily damaging them. Roof damages were reported at many locations as well. All told, an estimated #### million in damages occurred, the majority in northwest Alabama in Colbert and Lauderdale Counties. As the line continued east, additional tornadoes were spawned in Lawrence, Morgan, Jackson and DeKalb Counties.

ALABAMA, Southeast

A tree was blown down on Waldo Meadows Road near Barnes Road.

The tornado caused the collapse of a wooden storage building and lestroyed a metal outbuilding, Minor damage was noted to the roof and siding of several single family homes at this location, Minor tree damage was ens. Several miles to the east along County Road 75, a large, but diseased pine tree was toppled onto a double-wide mactured home causing significant damage. Between the two locations, there was minor tree damage and debris. Overall, the damage was consistent with an EFO tornado wite wask winds of approximately 80 mph. Thanks to Houston County Emergency Management and the Ashford Fire Department for their assistance with urrey.  **DOFFEE COUNTY — 0.9 NE CARL FOLSOM ELBA ARPT [31.42, -86.08] 03/25/23 16:07 CST 0 Hall (1.75 in) 03/25/23 16:07 CST 0 Source: Public  **DOFFEE COUNTY — 1.4 WNW CLINTONVILLE [31.41, -85.91] 03/25/23 16:07 CST 0 Fire Department for their assistance with urrey.  **DOFFEE COUNTY — 1.4 WNW CLINTONVILLE [31.41, -85.91] 03/25/23 16:07 CST 0 Fire Department for their assistance with urrey.  **DOFFEE COUNTY — 1.4 WNW CLINTONVILLE [31.41, -85.91] 03/25/23 16:07 CST 0 Fire Department for their assistance with urrey.  **DOFFEE C	NEVA COUNTY 3.6 NW HIGHFALLS [3/				Thursdaystawn Wind (FO FO lat)
Strong winds blew over a dog kennel between Geneva and Bellwood.  A strong cold front moved through the region during the afternoon hours of March 17th. A squall line preceded the front, resulting in a few instances of trees and power lines down across the tri-state area. In addition, a few tornadoes occurred across the Florida panhandle. Fortunately, these tornadoes impacted forested areas and no structures.
