Nickel-size hail was reported in the Pinedale area of southeast city of Montgomery.

A surface front moving through Central Alabama sparked the development of a broken line of showers and thunderstorms during the afternoon of May 30. One storm briefly intensified and produced nickel-size hail on the southeast side of the city of Montgomery.

Quarter size hail was reported at this location via	the MPING observer network.			

Isolated to scattered supercell thunderstorms developed ahead of complex of thunderstorms that formed along a pre-frontal trough axis approaching NW Alabama during the mid-day hours on May 2nd, 2025. This activity continued to develop as this complex of thunderstorms formed into more than one line of strong to severe thunderstorms that pushed across northern Alabama during the mid to late afternoon hours. Numerous reports of wind damage were reported and hail up to golf ball size (especially in severe supercells that developed ahead of the line) occurred.

Golf ball sized hail was reported near Tanne	er. Time estimated by radar.			

A tornado crossed from Limestone into Madison County just south of Browns Ferry Road. Further tree damage, predominantly uproots, was observed between County Line Road and Wall Triana Highway, with several instances of trees falling on homes. The tornado reached its maximum intensity as it approached Hughes Road, specifically near Downing Ridge and Millsford Road. In this area, two single- family homes suffered major roof damage, with most or all of the roofing material removed. Numerous trees were also uprooted at this location. Continuing eastward, the tornado crossed Hughes Road in the Dublin Circle area. Sporadic tree damage was noted north of Eastview Drive through Kensington Drive and Foothill Court. The tornado dissipated before reaching Slaughter Road.

 Lightning

 05/20/25 20:30 CST
 0
 Source: Emergency Manager

Lightning struck the Albertville Public Library building sparking a fire causing significant roof damage resulting in severe water damage to the structure and inventory of books and furniture. As a result, the building is scheduled to be demolished.

#### DEKALB COUNTY --- 0.6 ENE CROSSVILLE [34.28, -85.99], 1.6 NW COLLINSVILLE [34.28, -85.89]

A tornado began just east of Graves Street in the Crossville area, where a large tree was uprooted and a large branch (8 to 12 inches in diameter) was broken off of a tree 20 yards away. Additionally, a small porch on a nearby residence was damaged and lost most of its roofing. The tornado continued east just south

and paralleling Highway 68, uprooting sporadic trees and breaking off large tree branches along its way. More substantial roof damage occurred at a building associated with the Sand Mountain Research Extension Center off of County Road (CR) 190. The tornado intensified at this location to EF-1 intensity, collapsing the entire roof of the structure. Maximum peak winds of 93 mph occurred at this location. Here, the tornado continued on a eastward path and uprooted one very large tree and snapped another one from its base. The tornado seemed to widen a bit more as it pushed east, but weakened again to EF-0 intensity as it crossed CR 37. At this location, the tornado picked up a covering structure for hay and tossed it across a field. On the south end of the field, a small portion of one side of a barn was torn apart. The tornado then moved a bit more to the east-northeast paralleling Highway 68 as its path width decreased significantly

to less than 300 yards. The tornado continued its path uprooting trees or snapping off large branches of trees before dissipating just east of CR 84.

#### DEKALB COUNTY --- 2.1 SSW LOVELESS [34.29, -85.79], 2.0 SSW LOVELESS [34.29, -85.78]

 Source: NWS Storm Survey

A tornado tracked about 1/3 of a mile just east of County Road (CR) 83. At this location, one large tree was uprooted and a 3 to 5 inch branch was broken off of a tree 10 yards away. The tornado quickly moved northeast and strengthened to EF-1 intensity as it approached Highway 176. Near one residence, three healthy and large pine trees were partially uprooted and another was broken off in a different direction and fell onto a mobile home nearby. At this location, the snapped tree heavily damaged the roof of the residence and destroyed a carport. Just one house further northeast, a camper trailer (weighing approximately 5000 lb) was lifted off its foundation and dragged 15 yards, before being flipped on its side. Peak winds of 100 mph were reached at this location. Additional minor tree limbs were seen snapped in the distance.

An outbreak of tornadoes, large hail, wind damage and flash flooding occurred during the afternoon and evening of the 20th. Fourteen tornadoes occurred in north Alabama, including 1 EF-0, 10 EF-1, 2 EF-2, and 1 EF-U (unknown) which was a waterspout on Wheeler Lake. One person was injured in Colbert County. There were also several reports of large hail, including baseball sized and larger in northern Lawrence and southeastern Lauderdale Counties. Damaging winds were also experienced as well with the severe thunderstorms. Lightning sparked a fire which resulted in severe structural and water damage and total loss to the Albertville Public Library which is scheduled to be demolished. There were two reports of flash flooding in Jackson County.

#### MARSHALL COUNTY --- 0.5 ENE COTTONVILLE [34.45, -86.32]

05/24/25 10:11 CST 1 2K Lightning 05/24/25 10:11 CST 1 0 Source: Newspaper

Guntersville Fire/Rescue personnel responded to an incident where a man was struck by lightning on a boat on Lake Guntersville near Honeyomb Cemetery. The victim had "serious injuries" and burns in several areas.

Direct Fatalities: M55BO

Rounds of showers and thunderstorms developed ahead of an approaching cold front over northern Alabama ahead of an approaching cold front during the late morning and afternoon hours. Tragically, a boater on Lake Guntersville was struck by lightning while fishing and was seriously injured.
