

# .....November 2022 Climate Summary for the Denver Area.....

Photo taken by Russell Danielson

A series of upper level storms systems and associated cold fronts moving across the Rocky Mountain Region produced below normal temperatures across North Central and Northeastern Colorado during the month. This breaks the streak of 5 consecutive months with above normal temperatures in Denver going all the way back to June. Despite all of the storm systems, most of the precipitation was confined to the high country with much lighter amounts across the Front Range Urban Corridor, Plains and Palmer Divide.

## TEMPERATURES :

The average temperature at Denver International Airport for the month of November was 35.6 degrees F, which is 3.8 degrees below the normal of 39.4 degrees. The highest temperature of the month was 75 degrees on the 1<sup>st</sup> and the coldest temperature of 4 degrees occurred on the morning of the 30th.
