Hot and Humid Conditions will continue. Highs in the 90s each day.

Highest Heat Index Values will be on Friday, with readings from 105 – 109 degrees. Highest values will occur over the Eastern Midlands and southern CSRA.

Isolated showers and storms possible today and Friday. Increasing rain potential for the weekend as a weak cold front pushes into the Northern Midlands.

A return to more summer like rainfall pattern next week, with isolated to scattered afternoon convection each day.
High pressure still in control today. Isolated showers or storms possible this afternoon.
Hot and mostly dry. Heat index readings climbing to between 105 – 109 degrees.
Enhanced Hazardous Weather Outlook

https://www.weather.gov/cae/EHWO
A weak cold front moves into the northern Midlands. This brings an increasing chance for shower and thunderstorm activity and coverage.
Highest rainfall amounts through Saturday will be across the northern Midlands.
The front begins moving back to the north as a warm front on Sunday. As the front retreats, the region returns to a more typical Summertime pattern. Highs in the 90s. Lows in the 70s. Isolated to scattered afternoon showers and thunderstorms.
Near normal rainfall. Above normal temperatures.
Hot and Humid Conditions will continue. Highs in the 90s each day.

Highest Heat Index Values will be on Friday, with readings from 105 – 109 degrees. Highest values will occur over the Eastern Midlands and southern CSRA.

Isolated showers and storms possible today and Friday. Increasing rain potential for the weekend as a weak cold front pushes into the Northern Midlands.

A return to more summer like rainfall pattern next week, with isolated to scattered afternoon convection each day.
