

NWS EMWIN Text Product Catalog

(rev 241231)

This document addresses the identification of text products appearing on the US National Weather Service (NWS) Emergency Managers Weather Information Network (EMWIN) service. Information on the image products on the EMWIN service is published here:

https://www.weather.gov/media/emwin/EMWIN_Image_and_Text_Data_Capture_Catalog_v1.3k.pdf

The information in this document identifies the data used by the NWS in the operation of the EMWIN dissemination service. The EMWIN service is available to the public on the NESDIS HRIT/EMWIN satellite broadcast from the GOES-East (GOES-16) and GOES-West (GOES-17) satellites, and on the NWS EMWIN FTP file service. Further information is available on the Documents tab of the NWS EMWIN web page:

<https://www.weather.gov/emwin/>

Text products on the EMWIN service may be separated into two groups:

International Products.

International products – those received from countries outside the United States (US), its possessions and territories – are formatted to WMO standards per WMO Pub 386.

Appendix A - AWDS Table, provides an explicit list of International text products by WMO header.

Note - The US National Weather Service does release a smaller set of products grouped with the International Products by virtue of the absence of an AWIPS ID on the line immediately following the WMO header (see “US National Products” below).

US National Products.

US National products are formatted to WMO standards per WMO Pub 386, but include an AWIPS ID field on the line immediately following the WMO header. This field is six bytes in length consisting of four to six left-justified alpha-numeric characters and spaces to fill to the six byte field length where necessary. The first three characters of the AWIPS ID are the Category (CAT) Code and identify a description of the product content. US National products are generated by known originators associated with a specific WMO Originator Code (CCCC).

Appendix B – CATLST Table, identifies the product categories or types of messages released by one or more of the originators identified in the Site List Table (Appendix C).

The CATLST Table does not contain all the category codes found on the EMWIN service. A small set of US National products with assigned category codes appear in the AWDS Table (Appendix A). These instances exist to limit a particular message category to a finite set of product originators. A specific category code can exist in Appendix A or Appendix B, but not both.

The EMWIN service disseminates a specified subset of the total set of NWS message categories. A complete list of all NWS category codes is found here:

https://www.weather.gov/source/datamgmt/xr04_X_ref_by_NNN.html

Appendix C – Site List Table, identifies the WMO Originator Code (CCCC) of the offices which release products containing one or more of the AWIPS Category Codes identified in the CATLST Table (Appendix B).

Appendix D – Weather Program Listing, identifies the EMWIN short files names associated with the products listed in Weather Program documents and web sites. Links to the source documents and web sites are included for reference. The following Weather Program Listings are addressed:

NWS Tsunami Products

WMO RA-IV Hurricane Operation Plan 2018

How to Find the Weather, Water and Climate Products of Interest

US Weather Forecast Office (WFO) Products. - *work in progress* -

Point of Contact
