

Austin/San Antonio Weather Forecast Office WEATHER EVENT SUMMARY

Heavy Rain October 2015

24 – 25 October 2015

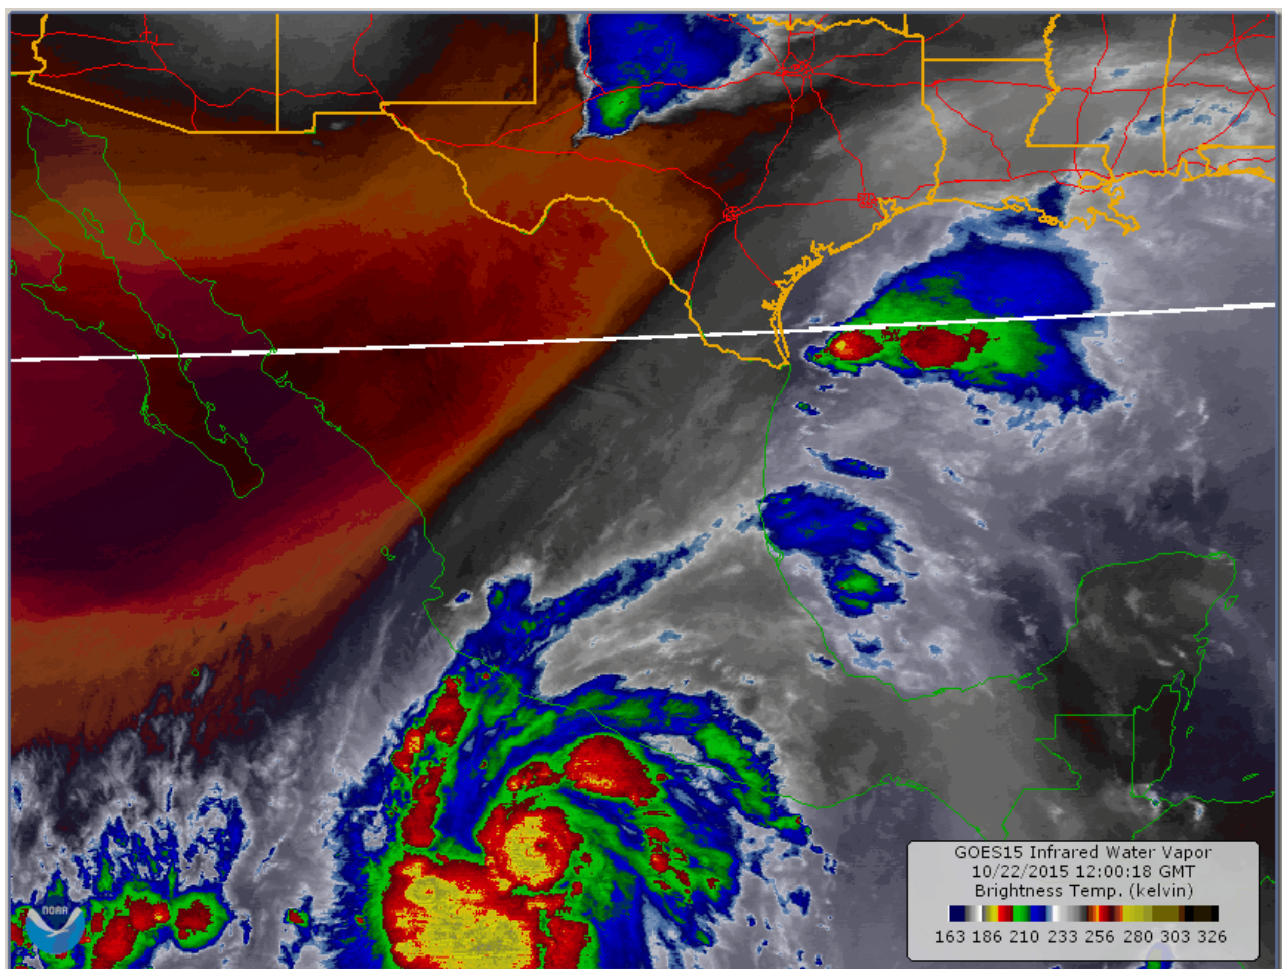

Three day rainfall ending Sunday, October 25th.

Heavy Rain October 2015

24 – 25 OCTOBER 2015

An upper level trough combined with a cold front and copious moisture produced heavy rainfall across much of south central Texas on October 24th and 25th. The heaviest rainfall amounts were generally along and east of the Interstate 35 corridor, where 4 to 6 inch amounts were common. Some of the highest recorded totals were 14.45" near Fayetteville (Fayette County), 11.81" near Anderson Mill (Travis County) and 11.08" near La Grange (Fayette County).

This satellite loop begins 7 AM CDT Thursday, October 22, 2015 and ends 1 PM CDT Saturday, October 24. This loop shows the track of Hurricane Patricia as it moved northwestward along the coast of Mexico on Thursday, then inland during the late afternoon on Friday. Prior to landfall, Patricia intensified at an incredible rate to become the strongest hurricane on record in the Atlantic and north Pacific basins. Patricia weakened while moving inland late Friday into early Saturday.
