...DEVILS LAKE OUTLOOK FOR FLOOD POTENTIAL...

Devils and Stump Lakes
Long-Range Probabilistic Outlook

The National Weather Service provides long-range probabilistic hydrologic outlooks for Devils and Stump lakes between January and September. They will not be provided between October and December. Depending on the season, the high or low water probabilities may be omitted due to their applicability to the hydrologic situation.

.OUTLOOK SUMMARY...

Precipitation since the last outlook (late September 2019) has been above normal (ranging from slightly above normal for northwestern portions of the basin to much above normal in the southeast). However, precipitation during just the winter period (November 2019 until current) has been generally below to near normal.

Climate projections for the months of February, March, and April indicate slightly above normal precipitation and below normal temperatures.

.Chances of Devils and Stump Lakes Rising Above Given Lake Levels...

The probability of exceeding a given lake level is the percentage of maximum lake level rises that are above that level for all the years that were run through the model using the precipitation and temperatures for those years during the valid period of the outlook.

Interpretation Aid: There is a 50 percent chance that Devils Lake will rise above 1451.6 feet during the valid period and only a 5 percent chance that it will rise above 1453.2 feet.

Probabilities for Exceeding Listed Lake Levels

FROM JANUARY 20, 2020 TO SEPTEMBER 30, 2020

LOCATION	95%	90%	75%	50%	25%	10%	05%
-----	-----	-----	-----	-----	-----	-----	-----
Devils Lake.....							
CREEL BAY	1450.7	1450.8	1451.1	1451.6	1452.2	1452.8	1453.2
Stump Lake.....							
EAST STUMP LAKE	1450.7	1450.8	1451.1	1451.6	1452.2	1452.8	1453.2

.Current and Previous Record High Lake Levels...

- * The current height of Devils Lake at Creel Bay is 1449.0 feet
- * The current height of Stump Lake near Lakota is 1448.9 feet

- * The most recent USGS provisional record daily average height for Devils Lake at the Creel Bay gage:
 ...1454.30 feet on June 27 of 2011
- * Previous records:
 ...1452.05 feet on June 27 of 2010
 ...1450.93 feet on June 27 of 2009
 ...1449.20 feet on May 9 of 2006
 ...1449.18 feet on June 17 of 2004
 ...1449.17 feet on August 2 of 2005

.Chances of Devils and Stump Lakes Falling Below Given Lake Levels...

The probability of not exceeding a given lake level is the percentage of lake level falls that are below that level for all the years that were run through the model using the precipitation and temperatures for those years during the valid period of the outlook.

Interpretation Aid: There is a 50 percent chance that Devils Lake will fall below 1450.2 feet during the valid period and only a 5 percent chance that it will fall below 1448.9 feet.

Probabilities for Non-Exceeding Listed Lake Levels

FROM SEPTEMBER 1, 2020 TO NOVEMBER 30, 2020

LOCATION	95%	90%	75%	50%	25%	10%	05%
Devils Lake.....							
CREEL BAY	1451.7	1451.3	1450.6	1450.2	1449.5	1449.1	1448.9
Stump Lake.....							
EAST STUMP LAKE	1451.7	1451.3	1450.6	1450.2	1449.5	1449.1	1448.9

The non-exceedance value for a listed percentage is the value where that percentage of all model cases run were below that lake level for the specified valid period of the outlook.

.OUTLOOK SCHEDULE...

- Between January and May, only the high water exceedances will be provided with valid periods ending at the end of September.
- Special Spring Flood and Water Management Outlooks will be issued in late February and early March.
- For June and July, both high-water and low-water exceedances will be provided.
- For August and September, only the low-water exceedances will be provided with valid periods ending at the end of November.

- No probability of exceedance/non-exceedance information will be given from October through December, since lake freeze-up levels will be given in the fall outlooks previously issued.

.ADDITIONAL INFORMATION...

The long-range probabilistic outlook is based on high and low lake levels that were calculated for the valid period using multiple scenarios of temperature and precipitation from 1949 to 2012 and current conditions of the lake, snowcover (in winter), and soil moisture.

By providing the complete range of lake level probabilities, the amount of risk associated with long-range planning decisions can be determined. These probabilistic outlooks are part of NOAA's National Weather Service's Advanced Hydrologic Prediction Services (AHPS).

A YouTube video on "How to Interpret River Outlook Products" is at:

This outlook is also presented as probability graphs of lake height for the full period as well as weekly probabilities. The outlook graphics and explanations that help in interpreting these outlooks are available on the NWS Grand Forks AHPS web page at:

water.weather.gov/ahps2/index.php?/wfo=fgf

Wind and wave forecasts for Devils and Stump lakes are available for a 7-day period when the lakes are sufficiently ice-free at:

www.weather.gov/fgf/lake_info
