...DEVILS LAKE OUTLOOK FOR FLOOD POTENTIAL...

Devils and Stump Lakes
Long-Range Probabilistic Outlook

The National Weather Service provides long-range probabilistic hydrologic outlooks for Devils and Stump lakes between January and September. They will not be provided between October and December. Depending on the season, the high or low water probabilities may be omitted due to their applicability to the hydrologic situation.

.OUTLOOK SUMMARY...

Since the last outlook issuance on June 24th, the area has finally received a bit of beneficial rainfall, especially across northern and eastern portions of the basin. Although amounts continue to be below normal, this precipitation has allowed drought conditions to ease slightly over the course of the last month. However, conditions are still classified in the Severe Drought category for much of the basin.

Climate outlooks for the remainder of the summer and into early fall continue to indicate better chances for above normal temperatures. Precipitation chances continue to lean slightly towards below normal values. Therefore, this set of non-exceedance numbers are slightly lower than the June 24th numbers.

.Chances of Devils and Stump Lakes Rising Above Given Lake Levels...

The probability of exceeding a given lake level is the percentage of maximum lake level rises that are above that level for all the years that were run through the model using the precipitation and temperatures for those years during the valid period of the outlook.

Interpretation Aid: There is a 50 percent chance that Devils Lake will rise above 1447.6 feet during the valid period and only a 5 percent chance that it will rise above 1447.6 feet.

Probabilities for Exceeding Listed Lake Levels
FROM JULY 19, 2021 TO SEPTEMBER 30, 2021

Current and Previous Record High Lake Levels...

* The current height of Devils Lake at Creel Bay is 1447.58 feet
* The current height of Stump Lake near Lakota is 1447.68 feet

* The most recent USGS provisional record daily average height for Devils Lake at the Creel Bay gage:
  ...1454.30 feet on June 27 of 2011
* Previous records:
  ...1452.05 feet on June 27 of 2010
  ...1450.93 feet on June 27 of 2009
  ...1449.20 feet on May 9 of 2006
  ...1449.18 feet on June 17 of 2004
  ...1449.17 feet on August 2 of 2005

Chances of Devils and Stump Lakes Falling Below Given Lake Levels...

The probability of not exceeding a given lake level is the percentage of lake level falls that are below that level for all the years that were run through the model using the precipitation and temperatures for those years during the valid period of the outlook.

Interpretation Aid: There is a 50 percent chance that Devils Lake will fall below 1446.1 feet during the valid period and only a 5 percent chance that it will fall below 1445.8 feet.

Probabilities for Non-Exceeding Listed Lake Levels
FROM SEPTEMBER 01, 2021 TO NOVEMBER 30, 2021

The non-exceedance value for a listed percentage is the value where that percentage of all model cases run were below that lake level for the specified valid period of the outlook.

OUTLOOK SCHEDULE...

- Between January and May, only the high water exceedances will be provided with valid periods ending at the end of September.
- Special Spring Flood and Water Management Outlooks will be issued in late February and early March.
- For June and July, both high-water and low-water exceedances will be provided.
- For August and September, only the low-water exceedances will be provided with valid periods ending at the end of November.
- No probability of exceedance/non-exceedance information will be given from October through December, since lake freeze-up levels will be given in the fall outlooks previously issued.

ADDITIONAL INFORMATION...
The long-range probabilistic outlook is based on high and low lake levels that were calculated for the valid period using multiple scenarios of temperature and precipitation from 1949 to 2018 and current conditions of the lake, snowcover (in winter), and soil moisture.

By providing the complete range of lake level probabilities, the amount of risk associated with long-range planning decisions can be determined. These probabilistic outlooks are part of NOAA’s National Weather Service’s Advanced Hydrologic Prediction Services (AHPS).

A YouTube video on "How to Interpret River Outlook Products" is at:

This outlook is also presented as probability graphs of lake height for the full period as well as weekly probabilities. The outlook graphics and explanations that help in interpreting these outlooks are available on the NWS Grand Forks AHPS web page at:

water.weather.gov/ahps2/index.php/?wfo=fgf

Wind and wave forecasts for Devils and Stump lakes are available for a 7-day period when the lakes are sufficiently ice-free at:

www.weather.gov/fgf/lake_info
