

NWS Houston, Texas 2018 Annual SE TX Regional Climate Summary Year in Review

Produced by Nikki Hathaway, Josh Lichter, and Charles Roeseler

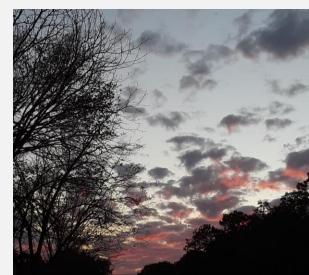

Cover Page Photo Credit

The photographs used on the cover of this Annual SE TX Regional Climate Summary, were all taken within the HGX County Warning area during each month of the year. The top left picture on row one starts January and then from left to right we move through the calendar year with the last photograph on the bottom right representing December. NWS Houston Galveston was given permission by the following photographers to use these pictures.

Overview: 2018 – Year In Review

When taking a look back through the past year, a few climate related items stand out making 2018 another interesting year for both weather and climate. The city of Galveston (6^{th}) and Houston Hobby (9^{th} tying with other years) both ranked in the top ten for warmest annual average temperatures. In terms of annual rainfall, both the city of Galveston (14^{th}) and city of College Station (15^{th}) ranked in the top fifteen.

To start the year, January had two rounds of wintry precipitation, one on January 2nd, when very light sleet was reported in the Houston Heights area, as well as light snow flurries across the southern portion of Montgomery County and northern Harris County. Later that month, a Winter Weather Advisory was issued for coastal counties, while a Winter Storm Warning was in effect across the remainder of SE TX on January 16th. Various types of frozen precipitation occurred including freezing rain, sleet, and snow from January 15th into the 16th. Reports of accumulation occurred in Walker County and northwest Harris County. Treacherous driving conditions commenced as bridges and roadways iced over, allowing black ice to form. High temperatures finally reached back into the 70s on January 20th. There were 28 consecutive days where the maximum temperature was at or below 70 degrees at Houston Hobby, which ranked 5th in terms of the longest run length while the city of Houston, had a 28 day run length which tied for the 12th longest set of consecutive days with maximum temperatures at or below 70 degrees.

March recorded it's wettest calendar year day on record for the city of College Station, on March 28th with a daily rainfall total of 4.52". The previous wettest day during March was 4.20" set on March 27th in 1980. Average monthly temperatures for May ranked in the top five for three of the primary climate sites: city of Galveston (1st), city of Houston (3th), and city of College Station (5th). Spring was near normal in terms of temperatures, but the months of May, June and July were unseasonably warm. When considering the warmest average temperatures beginning on May 1st through July 31st, the city of Houston (83.5°), Houston Hobby (82.9°) and the city of Galveston (83.1°) all ranked 4th warmest on record, while the city of College Station came in 9th warmest (83.1°).

When taking a look at the year-to-date average temperatures from January 1st through August 31st, the city of Houston ranked 8th warmest (72.8°), city of Galveston ranked 4th warmest (74.0°), Houston Hobby ranked 10th warmest (72.9°) and finally the city of College Station ranked 13th warmest (71.5°). When considering August average temperatures, Houston Hobby came in 5th warmest (85.9°) and the city of Galveston ranked 7th warmest (85.8°).

Snowfall records were recorded at the city of Houston (IAH), Houston Hobby (HOU), and the city of College Station (CLL) on November 13th as a wintry mix fell at isolated locations. Finally, the year ended rather wet, with the 4th wettest December recorded at the city of College Station and the 8th wettest December on record for the city of Houston. Additionally, the city of College Station had it's 4th and 11th wettest calendar days ever recorded in December, while the city of Houston had it's 5th wettest calendar day. The wet trend continued into the new year as well. When considering the period from December 4th, 2018 through January 4th, 2019, the city of College Station had its wettest on record and the city of Houston the 4th wettest on record.

The year also ended in an El Niño watch. ENSO-neutral conditions were present, but according to the Climate Prediction Center (CPC), El Niño conditions are expected to form and continue through the northern Hemisphere winter 2018-2019 (~90% chance) and through spring (~60% chance). The latest outlook from CPC for the next three months (including January, February, and March) calls for a 33.3% chance of above normal temperatures, a 33.3% chance of near normal temperatures and a 33.3% chance of below normal temperatures across Southeast Texas. The "EC" labeled on the temperature outlook stands for "equal chances." The precipitation outlook calls for a 40% chance of above normal rainfalls, a 33.3% chance of near normal rainfall and a 26.7% chance of below normal rainfall.

Climate Definitions

Low Min: The lowest minimum temperature recorded within a day. **High Min:** The warmest minimum temperature recorded within a day.

Low Max: The coldest maximum temperature recorded within a day. **High Max:** The warmest maximum temperature recorded within a day.

Daily Rainfall: The highest rainfall value measured within a day.

Note: Climate data is PRELIMINARY (unofficial). CERTIFIED (official) climate data is available from the National Centers for Environmental Information (NCEI).

Significant Annual Statistics

The city of Galveston (6^{th}) and Houston Hobby (9^{th} tying with other years) both ranked in the top ten for warmest annual average temperatures. In terms of annual rainfall, both the city of Galveston (14^{th}) and city of College Station (15^{th}) ranked in the top fifteen.

January

... Abnormally Chilly January ...

Another month filled with below normal temperatures and wintry precipitation. There were 28 consecutive days where the maximum temperature was at or below 70 degrees at Houston Hobby and the city of Houston. This 28 day run length is tied for the 12th longest set of consecutive days with maximum temperatures at or below 70 degrees at the city of Houston, and ranks 5th for Houston Hobby. For the city of Houston, there were also two rounds of wintry precipitation on the 2nd, and two weeks later beginning on the 15th and continuing into the 16th. Temperatures were not the only ones below normal either. Total monthly precipitation was also below normal, with a deficit of 0.5 to 2.5 inches at the primary climate sites. Overall, this lack of rainfall across the region throughout the month was the primary contender behind the expansion of drought conditions across portions of Southeast Texas.

January: Two Rounds of Wintry Precipitation

On the 2nd, a Hard Freeze Warning was in effect for the entire region of SE TX as temperatures were forecast to fall below 25 degrees for two hours or longer. Very light sleet was reported in the Houston Heights area, as well as light snow flurries across the southern portion of Montgomery County and northern Harris County.

Later that month, a Winter Weather Advisory was issued for coastal counties, while a Winter Storm Warning was in effect across the remainder of SE TX on the 16^{th} . A Wind Chill Advisory was also in effect across all of SE TX. Various types of frozen precipitation occurred including freezing rain, sleet, and snow from the 15^{th} into the 16^{th} . Reports of accumulation occurred in Walker County and northwest Harris County. Treacherous driving conditions commenced as bridges and roadways iced over, allowing black ice to form.

January Temperatures: Consecutive Days Max Temperature at or Below 70 Degrees

High temperatures finally reached back into the 70s on the 20th. There were been 28 consecutive days where the maximum temperature was at or below 70 degrees at Houston Hobby, also ranking 5th in terms of the longest run length with these conditions. For the city of Houston, this 28 day run length is tied for the 12th longest set of consecutive days with maximum temperatures at or below 70 degrees, tying with the years of 2010, 1960, 1924, and 1893.

February

... Warm and Soggy February ...

The month of February brought well above normal temperatures along with above normal rainfall totals across much of Southeast Texas. The coastal counties really felt the heat, with twenty-four of the twenty-eight days of February experiencing above normal temperatures for the city of Galveston. Based on the monthly average temperatures, this was the 7th warmest February for the city of Houston, the 3rd warmest February for Houston Hobby Airport, and the 2nd warmest February for the city of Galveston! The month of February was also fairly wet. The city of Houston recorded the most in terms of monthly rainfall out of the four primary climate sites, ringing in with a total of 5.73 inches. Therefore, this was the 12th wettest February on record for the city of Houston. The coastal counties did not see as much rainfall, resulting in a below normal monthly rainfall total for the city of Galveston.

March

... Rain on One Day Did Not Keep the Drought Away ...

The month of March was rather dry with three of the primary climate sites reporting below normal rainfall totals. With most of the rainfall occurring on the 29th over SE TX, drought conditions expanded and worsened across the western reaches of the forecast area and coastal counties. On the contrary, the northern counties mainly north of I-10 saw above normal rainfall totals also due to the rainfall that fell towards the end of the month. Above normal temperatures were also felt, and the feeling of Spring like weather began to settle in across SE TX.

April

... A Near Normal April...

The month of April was rather dry with below normal rainfall totals reported across SE TX, allowing drought conditions to hold steady along the western coastal counties. In terms of temperatures, all of the primary climate sites reported near normal to below normal conditions. None of the four major climate had yet reached 90 degrees for the year. On average, the first 90 degree day is April 30th at College Station, May 7th for both the city of Houston and Houston Hobby Airport, and June 22nd for the city of Galveston.

May

... Record Breaking Hot May...

The month of May was sizzling with average temperatures ranging between 3 and 5 degrees above normal. Average monthly temperatures for May ranked in the top five for three of the primary climate sites: city of Galveston (1st), city of Houston (3th), and city of College Station (5th). Rainfall totals were lacking throughout the month with high pressure parked over the region, and as a result monthly rainfall totals were well below normal. Drought conditions expanded drastically south of I-45, ending May with moderate to severe drought conditions along the western coastal counties such as Matagorda, Jackson and Wharton.

June

... June 2018 Was Warmer Than Normal ...

The average monthly temperature in June was between 2 and 3 degrees warmer than normal across Southeast Texas. Upper level ridging brought very warm temperatures during the first two weeks of the month. A break in the heat occurred toward the middle of the month and some much needed rainfall and associated cloud cover kept high temperatures in the 80's. Upper level ridging reasserted itself toward the end of the month and temperatures again warmed back into the middle 90's.

July

... The Month of July Brought the Summer Heat...

Summer was in full swing throughout the month with average temperatures approximately 1 to 3 degrees above normal. A total of four heat advisories were issued throughout the month, from the 24th through the 27th. A heat advisory for Southeast Texas is defined as heat indices greater than or equal to 108 degrees or a temperature greater than or equal to 103 degrees. A total of 13 records were also recorded across the primary climate sites. Precipitation values were above normal across most of Southeast Texas.

August

... The Month of August left SE TX Feeling Warm and Dry. . .

Average temperatures for the month were the 5th warmest at Houston Hobby and the 7th warmest at the city of Galveston. Temperatures for the first half of the month were near to slightly below normal but towards the later half of the month, six records were broken in total at both the city of Houston and Houston Hobby. Rainfall was 2 to 3 inches below normal during the month and many locations failed to tally even an inch of rain. The city of College Station recorded 0.21 inches of rain and this ties for the 8th driest August on record. The month ended with severe drought conditions in Madison, Brazos, and Houston counties, and roughly 63% of Southeast Texas was experiencing drought conditions.

September

... Soggy September in SE TX...

Temperatures remained near normal to slightly above normal across the area throughout the month. Only two daily records were broken, both of which were high minimum temperatures at Houston Hobby Airport. Above normal monthly rainfall helped to improve drought conditions throughout the month. The city of Galveston recorded its second wettest September on record with a total of 24.32 inches of rain.

October

... A Warm and Soggy October...

Average temperatures for the month of October were above normal at all primary climate sites. Thirteen daily temperature records were broken in total, with one daily rainfall record also broken at the city of Galveston. Rainfall totals were nearly an inch to seven inches above normal at all climate sites. Additionally, both the city of Galveston and College Station ranked in the top three for the wettest two-month rainfall totals for September and October. This much-needed rainfall eliminated all drought conditions across Southeast Texas.

November

... A Chilly November Brought Record Breaking Snowfall ...

Below normal temperatures kept the month of November on the chilly side, although the first week of the month brought above normal temperatures. Twelve daily temperature records were broken in total, with three daily snowfall records broken specifically at the city of Houston, College Station, and Houston Hobby on the 13th. Below normal rainfall totals also occurred across much of the region with monthly deficits between one and three inches.

December

... A Record Breaking Wet December ...

Monthly rainfall totals were well above normal across the area, though the month ended with slightly above normal average monthly temperatures. Six daily temperature records were broken in total, with five of these daily rainfall records. Additionally, the month turned out to be the 4th wettest December on record for the city of College Station and the 8th wettest December on record for the city of Houston. The extra rain helped to keep drought conditions out of the area once more, leaving the entire month of December drought free.
