-----------	----------------------------	--	--	--	----------	----------	-----------	--	------------------

A storm system combined with cold air at the surface led to 1/2 to 1 inch ice accumulation generally north of a line from Columbus to Navasota to Huntsville to Groveton. Precipitation fell mostly in the form of freezing rain, with sleet occurring in heavier thunderstorms. Most accumulation was on trees and power lines, with numerous trees and power lines downed. Heaviest icing occurred in Burleson, Brazos, and Washington counties. SH 36 bridge between Burleson and Washington counties was closed with icing reported on FM 3058 and FM 166 in Burleson County. The ice storm caused numerous power outages with most of the city of Brenham without power for over a 12 hour period.
